From K6ME Terry:

Well 1500 watts CW on the CB Band sounds like fun But they would just move
on up too 10 meters like some already have.
Anyway CBers are not the root of this CW thing.
Since I'am an extra you know where I stand on the matter right !

I wonder what is in fact the BEST filter (assuming one is needed).

Is aural pattern recognition of encoded information the best approach?
Or should the "filter" be based on knowledge that can be applied to
far more than the almost "mechanical" and automatic (once mastered)
recognition of a predefined set of tones?

Good question Ray! My first exposure to it was when I was in my late pre-teens. A guy up the street (who became like a big brother to me) was a ham. I remember him in his shack talking to people all over the world. I thought it was real neat. But alas I didn't bother with it for some reason. Then in my late 20's I started shortwave listening and hearing the hams. Sounded like it was a lot of fun. Sooooo, in the early fall of '94 I decided to check into it. Got the book "now your talking" at Radio shack. 30 days later took my tech exams and passed! A year later I took and passed my 5wpm and upgraded to Tech plus. Now I'm working on my code speed to get my General. One of the draws to me was the possiblity of talking to astronauts and cosmonauts in orbit. Well, last year I did it! I talked to KC5TZQ, John Blaha on Mir! Man I'm STILL pumped up from that contact!

Let's hear MORE stories!

73!

Sorry to burst the bubble, but your four year old is wrong. *.to is an international domain -- because they got the "*.to" address, a commercial outfit has been exploiting it's "English" meaning (through their government) and inviting cute things like "surf.to", etc... The referenced page in fact does lead to "http://www.qni.com/~kg0zz/hamlinks.htm" -- but, it depends on your path to *.to, and the initial traffic going there.

regards.. Chuck

I have purchased a lot of things from Radio Shack and for the most part I have been treated well. The times I have had trouble that I didn't think was fair, I complained directly to the Brass in Fort Worth. In every case after a reaming for being bothered by a customer that should have been taken care of locally, the store manager in question couldn't do enough to make me happy. In one case the manager even ran from the counter when he saw me coming to open the door and give me the royal treatment. The moral to this story is TAKE the time to write a letter to the Top Brass of any company you are having trouble with. Be polite, point out the problem you are having, be specific on the solution you would like, and don't fill the letter with foul language and threats. I have found that the above advice usually produces positive results even when what I'm asking for isn't what I deserve.

10. A use of morse code

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-01 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34abb9d1.17821458@news.sprynet.com>
Source record: 182789

greetings and happy new year.

Recently, I was watching a program on tv concerning ice research in the arctic.

The reason for this message has nothing to do with the topic of this documentary but something that was being done in the background.

Most of the conversations, ship to ship (there were at least 2 ships that I could see) and within the crew members was being done using voice.

However, in at least one shot I saw a person using cw. They didn't say what the cw was being used for but I suspect they were exchanging technical information from the ship to the central 'laboratory' using cw.

In response to Ray,K1XV:
I first became intrested in radio when my dad turned me on to
the wonderful world of SWL, way back in 1965. Ten years later I got into
the even better world of scanning and Chicken Banding, Back in the days
when the Chicken Band was licenced. (My call was KPW-7112)
Anyway, I wanted to get my ham licence in the worst possible way, and
finally got it in Late October of 1996, With Technician class, Callsign
KB2ZYO. Am now working for my upgrade to Tech Plus; Hopefully, it won't
take me another 20 years to get around to that one...
73's, and happy 1998 to one and all,
Dave, KB2ZYO

Typical.

You can't answer a question, so you resort to attacking someone's writing skills. I suppose you probably even have a college degree, so that makes you a better person. Therefore, a less educated person isn't entitled to an opinion because they can't construct perfect sentence.

Testing does not define the "standard". The FCC defines the standards.
The tests only reflect the ability of an individual to meet those
standards. Overall, I have met better operators on HF than on VHF/UHF.
I have heard things on 2 and 75CM that I thought were to be found only
on 11 mtrs.

Frank, K7RMJ

hmmmm.... almost an echo in here. You don't suppose that what we hear
most is somehow related to where we listen, do you???

just food for thought.

Only when the other party "attacks" first, as was the case here. Don't you think it looks pretty foolish when someone (like the party in question here) attempts to come off as an expert opinion on radio regulations, but yet cannot even compose a simple sentence that is free of errors?

"Where's that big 'ol CB RAMBO??"

Hallo dr OM
>Blake - WB4PLL
I have red on my old Antenna book that to rise the impedance level of
a shortened GP a capacitance HUT should be mounted on the top. But
there are no measures on it. What for measures (i.e. formulas) would
be for a Cap. Hut for an 80M gp about 8 to 10 meters tall ?

Having a scanner in ones car depends on the local law.

The most recent scanner bill made some reference to excluding amatuer radio operators and firefighters ... but that bill is pretty much dead for a while.

Rick Tannehill wrote: "If the code is still such a great filter
explain the trash mouths on our 20 and 80 meter bands."

Well Rick, we have 3,750 kHz of M/HF spectrum. If we were to divide
that up into say, 5 kHz-wide "channels", we'd have 750 "channels."
So let's say we can have 750 simultaneous QSOs occuring on the bands.
Now what percent of those QSOs contain trash mouths? Just 2% would
be equivalent to 15 trash-mouth QSOs. Can you even find 15 rotten
QSOs occuring simultaneously on the bands?

If just 2% of the QSOs consists of riff-raff, I'd say we're doing
pretty well. That riff-raff exist on M/HF just goes to show that
even the riff-raff can learn the code.

Care to guess what percent of all HF-licensed amateurs make up that
riff-raff? One percent would be a very generous figure (keeping in
mind that if you so much as sneeze on HF half the world might
hear you).

That you don't encounter the riff-raff on CW must mean that banning
voice would completely eliminate the problem.

73, and Happy New Year,
Jeff KH2PZ / 7

Try the IC-2000H. It's roughly similar, with 50W max and 60 alpha
memories. Last I heard, HRO was seeling them for $234.95.

I have one and I love it.

Greetings to the group,

Amor,
I can understand someone wanting to help others partake of a very fine avocation such as amateur radio and I applaud your efforts. I know how easy it is to learn the code and what an insurmountable obstacle it can appear to be to those who do not yet know it.

It took me 6 weeks of 1/2 hour classes 3 times a week (thaks Carl, K7CUZ) plus a half hour daily listening to a code RECORD (1959) to learn the code at 8 wpm. I was age 12 at the time. I am NOT particularly bright or gifted. I was NOT the fastest learner. If I learned it, and if I cared enough about my hobby to learn it, why is it so difficult for others? It is actually less of a requirement than the technical knowledge requirements for a Novice license.

I do hope the code is kept as a requirement for amateur radio just so it will not be forgotten. I too have many friends who complain that the code is too hard to learn so they shy away from it. My comments to them are always the same, "Give it a try. It is a LOT easier than you think."

The "No-Code" license is upon us. Okay. so be it. Then I welcome the new class of Amateur Radio operator and I challenge them to exceed the standards and deeds of bravery and innovation that were established by many Amateurs throughout history. I know, I know... this sounds a lot like flag waving,

but there IS a lot of fine history about amateurs already in the books, and I am also sure the new class of amateur WILL exceed those standards and deeds. If the use of cw eventually goes away, then it will just be another page in the history books, but cw will NOT die on the amateur bands as long as I have a license.

As to being ashamed for having cw as a prerequisite to full access, don't be! The instances where cw was instrumental in saving lives or assisting the injured when all other modes of communications were inoperable are many. Ask just about any WWII Veteran. There is your valid reason why cw was required for many years. At one time, it was THE most popular mode of communication. It was the ONLY mode at one time. The technology available to us these days is advanced to the point where cw is now almost a dinosaur in comparison. Don't be ashamed of amateur radio because it has not changed as rapidly as technology. Be ashamed of our governing authorities for not changing rapidly enough to keep up with changing technology. Or be ashamed of those few people who like to post outrageous comments intended to irritate or shock others. But don't be ashamed of amateur radio.

Gee, looks like my $0.02 worth turned into $0.25. Sorry, I'll put the soapbox away now. If anyone wants a cw schedule, just send me an email or look for me on 40cw in the evenings.

Regards to all and Happy 1998

Larry I kind of see your point, but signatures? Email is WIDLEY used now as
a means of comunication, besides, who would want to send a fals QSL card?

I think its a great idea. Especially with all the problems some countrys
are having with snail mail. Even alot of those countrys still have net
conenction (strange as it sounds)

But hay, I guess its up to the powers at be. But Im going to give out
eQSL's as well as mail QSL's to whoever I have a email address for.

And BTW, I am only a tech now so not much need for it but I do plan to up
and then really need them.

So it's not ready yet, but if anyone would like to see my eQSL jsut email me
privatly and ill send it to you when Im done.

Hello Brad,

The only "no-code bashing" which occurs on a regular basis is criticism
of those codeless hams who made a personal decision to get a codeless
license, and now whine about not having access to HF. If you have a codeless
license, and you are happy where you are at and don't care if you have
HF access, more power to you, and enjoy the hobby.

Or as a TSR? So that the PC could do other things, too?

Instead of relying on a PC, can some one crunch some code for a
PIC? (Or COP8? :^) A BS2 may be too slow.

I would think a small "black box" that converted the datastream
into a serial control stream would be *Much* more convenient.

It could be small enough to carry along with your portable (or
even mount *inside*), making any "controllable" portable
"trunk-capable". No laptop needed!

In fact, could someone convert the code for the MDT decoder?
Datastream in and 9600 baud serial out - You could use any OS
(Mac,PC,UNIX,LYNIX), even a HP48, Palmtops or a Pilot.

Unfortunately, I am not a "Code Jockey", and this is *way* above
my current programming skills at this time.

We seem to have some very proficient programmers out there, it
should be easy for them to do this conversion. The bulk of the
code is already available.

Wouldn't it be nice to have a "software upgradable"
trunk-tracking scanner?

in the federal laws..it is against the the law to use a scanner or 2way radio to break, bend or even elude the laws of any city, county or state. so, lets say you have one of those scanners thats called the bear tracker, and your speeding thru tenn. the warning light goes off and you slow down...well, tenn highway patrol have vehicle extenders tied into their cruisers, and thats what the beartracker picks up on. you have a unmarked hw patrol unit two cars behind you and he keys his radio to say something, and you hit your brakes. after he pulls you over, he sees the scanner, and knows thats what warned you, he can arrest you on the spot.
in short, the states have started adapting laws making any scanners, radar/lazer detectors and cell phones illegal to have hooked up in your car..so my advise, keep the scanner at home, and the cop that pulls you over wont asume your a drug dealer, and go thru your car looking for any thing he can find.

Masa wrote: "HF rigs are so expensive to buy..."

You're apparently blinded by the full-color magazine ads, Masa. I'm awaiting the delivery of a 3-22 MHz 10W CW transmitter from Fair Radio. Bought it from them for $30. My Galaxy SSB/CW HF transceiver only cost me a $40 dinner for the previous owner.

My soldering gun cost me $10. From that $10 investment, I've built, at no additional cost, a dozen radios using components from other electronic devices.

Buying used gear or building your own will allow you to get on the air at little or no cost.

Roll has said essentially that on numerous occasions. Yes, the
wording has been *slightly* different, but the meaning has been
clear ... you have stated that Morse testing "must" be continued,
else people will not bother to learn Morse and the mode will ball
into disuse.

That is, for all purposes and intents, the exact same claim that
you challenge Amor to cite an example of.

Someone@somewhere wrote: "While you scream at each other about
code requirements your hobby collapses in on itself."

Could you be specific in how the hobby/service is collapsing
in on itself? We were awarded three new HF bands during the
last decade, and there is a government proposal to award us
with more MF and HF spectrum. HF-wise, we're doing quite well.

I see no problems, except for a little bickering on the newsgroups
- many of the more vocal aren't even licensed, so they're nothing
more than a bit of noise - the NG equivalent of repeater kerchunkers.
(I guess yourself should be included in that group - on the outside
looking in.)

Oh, there is a very small handful of riff-raff on HF, but considering
the great number of licensed hams, the riff-raff makes up a tiny
percentage of all amateurs. You'll note they're all on phone, not
CW.

Cecil--your Dr. Williamson is no more a victim of a caste system than
you, me or any other ham, and you know it. You have already stated that
he *chose* to be a no-code tech simply because he decided not to comply
with the requirements of any other class of ham license. That is his
choice, as much as it was yours and mine to fully comply. Whatever else
you read into it is just so much agenda-promotion.
--No-Code Agenda promotion, to be sure.

here in portland oregon, PGE was responsive... but only after making a nuisance of myself for weeks. their noise expert knew abt as much as the average ham. a good point. he had me tune in my noise problems on the collins while he was on his cell fone... and as i tuned across the 40mtr band he announced... "SCR noise". lite dimmers. not a lot anyone can do abt that.

by putting the audio on a scope, i could determine that the noise rep rate was 60 Hz. a nice sawtooth. giving this info to the pwr line expert also confirmed his statement.

i also discovered one nite that their "wide area" light fixtures down the block were not working properly. another souce of intense static. a bad light ballast was the problem.

sometimes the pwr company will change insulators or replace (or even re-connect!) power line filters at transformers (those coils at the tops of the poles). often, one work crew will disconnect them and forget to re-connect them after they're done.

once dimmer hash gets into the pwr line network, it's a bitch to eradicate.

Yeah! and I am sure the would know how to do a RF exposure evaluation!
Let's see it wold go something like this:
...k the FCC I can radiate my family and neighbors if I wann, its a free
country!
Besides...my family lived right nexte to a FM radio station pumping out
100,000 watts and look at how I turned out.
The RF exposure and interference ...p is just a commie plot to take away
my rights to cuss and swear over the air (followed by a beer belch).

I actually agree with you. I wouldn't mind if they increased the questions on each test by say 15-20. I think haveing to know more technical info is far more important than having to do a code test. I'm currently trying to get to 13wpm so I can upgrade to general (from Tech plus).

68. PCR-1000: Full coverage mod (for free)

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-01 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34ef22f2.974811765@nntp.atlanta.com>
Source record: 182945
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner

You've been waiting.

You've been told it can't be done.

You don't want to pay for it.

Here's how you do it.

The PCR-1000 full coverage mod:

What you'll need:
Small philips screwdriver
Slightly larger philips screwdriver
Soldering iron with *very* fine tip
Xacto knife, or other sharp tool
2 0-ohm surface mount resistors, 0804 in size, or
30 guage wire-wrap wire
No fear of surface mount components
Ability to follow instructions

Very very very first step. Read ALL the steps before
starting. Make sure you feel comfortable making a mod of this nature.
It's not rocket science, but it does require a steady hand.

There are three things that can happen as a result of this
mod. 1) You're completely successful. 2) You screw up a surface
mount pad, but the radio still works when you're done. 3) You're a
total hack using the wrong tools, and you send the radio back to Icom
for repair.

Hopefully, you're a result 1 type person. At worst, you're a
result 2. If you think your going to be a result 3 type, don't even
start. Call a friend.

We've done this mod on 2 radios with complete success. We
can't guarantee that in later radios this mod will still work. It
works at least with serial numbers up to 1111 in the last 4 digits.

Let's get started!

Remove the 8 screws that attach the cover, and remove the top
cover of the radio.

Orient the radio so that serial, power and RF connector are
closest to you, and the power switch faces away from you.

On the PC board closest to you, in the upper left hand corner
you should see a 80 pin surface mount chip. It has a number such as
64F3334 stamped on it. This is the processor.

Near the upper left hand corner of the chip, you should see 2
small green 0-ohm resistors. To the left of the two resistors you
should see an unpopulated pair of pads. These are the 3 "R"s below,
on the left. The 4th "R" is used for location reference below.

(Picture courtesy of Alan Adamson, NE1H)

Using the soldering iron and knife, *carefully* remove the
right hand resistor. You'll need to alternately heat the two ends,
while apply a *light* pressure with the knife. Once it's hot enough,
it will left off. It's very easy to destroy the pads the resistor is
soldered to, so be *careful*.

You'll now need to short the pads of the left resistor (this
is the unpopulated one). You can either try and re-use the resistor
you just lifted (least good idea), short them with a short piece of
wire wrap wire (OK idea), or use a real 0-ohm resistor (best idea).

For the next step you have two options. One option is easy
and does not require removing the board from the radio (recommended).
The other option is "more correct", but will require disconnecting all
the cables, removing the 5 screws that hold the board down, etc
(purist method). We'll presume you're more likely to want easy, so
here are the steps for it.

Keeping the radio oriented as described above, look below the
right hand resistor (the one we removed). You should see 3 vias
(holes) (see picture above). Follow the left most via, and it should
go to the left most pin of the processor. The second via should go to
the next pin to right, and third via should go to the pin to right.
At this point, you should see two pins that don't appear to be
connected to anything, then a pin that connects to a small black
resistor marked 201 (this is the 4th "R" in the picture).

If you've sucessfully located the 6 pins above, we want to short the pin that is the 4th from the left to ground. Above these 6 pins, you should see a small black rectangle, with 8 pins. I believe it is marked 220. On the side of this part (it's a resistor pack), there is a pin that is soldered to the ground plane.

To short the 4th pin from the left to ground, tack a wire to the pin. Be *very* careful not to short the adjacent pins to the 4th pin. It's very easy to do. It you do, use a piece of Soldrwick or coax braid to remove the solder. Better yet, don't short the pins. Tack the other end of the wire to the pin on the resistor pack described above.

OK, you'd rather do it the "more correct" way. Disconnect all the cables from the board. You'll need to remove the shield from the RF section to remove the white ribbon cables. Disconnect the power and speaker cable. Remove the 5 screws that hold the PC card down. Remove the card from the radio.

Orient the board as described above. Look for the white connector above the packet connector (lower left). It's marked J12. Just above that are a pair of solder pads for a resistor. One side goes to ground, the other goes to a via. Follow the trace on the bottom side of the board. You should see that it goes to a via, but that the trace has been cut right next to the via.

Using a sharp knife and a lot of care, scratch away the solder mask to reveal bare copper on the trace. Use a piece of wire wrap wire to repair the cut trace (bridge the trace to the via). Back on the top side, short the pads for the resistor that are open (this is the lower case "R" on the left, off by itself).

Reassemble the radio. If you used the "more correct" way, make sure you get all the screws and cables back in.

Plug it in, turn it on, fire up the software. Tune a frequency you couldn't before. If you can tune it with the software, and the squelch is open, you're working!

If it's not working, review everything we described. Make sure you didn't short any pins. I can't offer you much more help if it didn't work.

Remember, you screw up your radio, it's not my fault. I don't work for Icom, I don't represent Icom. I don't endorse listening to frequencies you're not supposed to, and can't be held liable for anything that happens, anywhere in the universe, as a result of you making this mod, or even thinking about making this mod (Gawd, I hate lawyers. CYA!). This mod was done completely from our own experience and background, and did not reference any material. We don't know about these people selling the mod on the 'net, but we didn't steal it from them.

Hope this helps. If you've got any suggestions to improve how to make this mod, please send e-mail. If you made this mod, let us know how it went. Also, if you want a list of the PCR-1000 commands we know about, drop us e-mail, or use DejaNews(tm) and search the alt.radio.scanner groups for the post (look for PCR-1000 in the subject).

- Chris, KD4DTS

(Thanks to Alan Adamson, NE1H for his being ready and willing to sacrifice his radio to a higher cause, and his drawing).

After I read some of the other replies, I reread the original message
and I am now not sure if the person was looking for plans to build a
plane or the radio control part of it.

I guess the reason I jumped to that conclusion was that if the person
wanted to build the airplane I concluded they would have gone to a
newsgroup more associated with model aircraft building.

>don't buy, hmmm.

they use it and they don't buy. it happens everywhere... including
sharewares and such. if you get a full version free, why do you give
a donation ?? that's why many restrict the use. when I write my

advanced study guide for Canadian amateurs (sometime soon... by the
end of next summer), I must restrict the use (maybe I can give out
first one or two pages ,out of 20 say, free) because of it. I didn't
like the idea of it, but I will have to do it next time
unfortunately...

> Can you understand what I have written to you today m@s@?

I was very happy when some kind people helped me about antenna length
and such. When that happens, I always try to find out some other
articles that I can help with. It was unfortunate that majority of
articles were framing and complaining about my post [antenna length]
which didn't give me any positive.

Most of the articles in the newsgroups here, in general, are
unforunately don't do any good to the people out there. I may be
the one [articles], but I am trying to change it. This time, please
change your attitude.

>Boy, you don't get around much, do you?
>
>"Where's that CB Bimbo?"

It's very difficult to know the make and model of every radio that
has been produced, past and present. For example, I'm awaiting
the arrive of a T-784A/GRC-109 transmitter - do you have any clue
as to what that might be? Sitting beside me is my trusty ol' Galaxy
GT-550 - can you tell me anything about it? Back in Hawaii I use
a WRL Globe Scout 65A - ever heard of one? On 10m CW I use a
TRC-415 - are you familiar with it? For 2m I have an HW-202
with an outboard GLB 400B - know anything about them?

Surely, Mr. Bimbo, you've answered "no" to all the above, so you must
now eat your own words: "Boy, you don't get around much, do you?"

Happy new year, Bimbo,
Jeff KH2PZ / 7

Hi,

I am looking to limit the band edges of the TS-570D
to conform to the European models of the rig. As it is, the
rig is open on all the bands. I'd appreciate if someone
could send me information on how to perform this mod, or at
least point me to where I might procure such info. Thanks.

Hello Tom,

You'll find that most pro-code advocates agree with your synopsis above.
I have found almost no people (on either side of the code test issue)
who think the existing theory examinations are "sufficient". I think
most people (again, both sides) believe that the technical content is
sufficient or needs to be modified slightly, but the delivery mechanism
is all wrong (how many colleges do you know that give you your final
exam questions and answers at the start of your classes, and let you
"pass" the class by taking and passing the exam whenever you want?)

I, for instance, would like to see the examination process privatized
and run similar to the SAT testing system. No exact pre-published question
pools, just study guides (with sample questions/answers) similar to SATs.

Even though most of the No-Code Agenda agrees the theory testing structure
is broken, they steadfastly refuse to adopt a position of mutual cooperation
with many in the pro-code camp to work together and "fix" the theory
examinations. Once the theory examination structure is fixed, many in the
pro-code camp (myself included) would actively support elimination or
reduction in the code examination.

There is another vein of thought within the pro-code camp that the code
test should be maintained to promote a common mode of communications between
all hams. Morse represents the least technical, simplist method to use.
While there certainly is logic to this argument, I personally don't agree
with it as use of any mode within the amateur service is optional, and
requiring a 'common mode' is pointless unless you are also going to require
people to own gear and operate it regularly.

Welp, that's enough for now.

92. Fewer SWLs becoming hams?

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-01 00:00:00 UTC
From: algo@bellatlantic.net
Message-ID: <68gcg5bo1@gte1.gte.net>
Source record: 182969

When I was a young larva in the 1950's, I had a Heathkit AR-3 that I used to listen to for hours. Listening to hams on AM built my interest in ham radio, and in 1962, in my pupae stage (age 14) I got a novice license, and soon later a general. Most of my peers at that time got started in this way. We had little or no initial exposure to VHF.

It recently occurred to me that the present use of SSB makes it very challenging for a SWL with listen in on ham radio, if they can listen at all, with modest receiving equipment.

As a result, I think that fewer SWLs are exposed to the next step, becoming licensed. Instead, those who are newly licensed these days get their first exposure in some other way.

It would be interesting to hear anecdotes as to how people first got inspired to get a license.

73, and Happy New Year, Ray, K1XV

A couple of thoughts.

We live in a society that lacks self discipline. To ask government to perform functions that we are unwilling to ourselves, is to ask for rebellion. Americans no longer understand freedom and rights require self discipline, duty and obligation. This is reflected in the problems that we see within amateur radio.

Regulatory agencies, like the FCC, should not have enforcement power. We see problems with agencies such the IRS, ATF and FAA where either rules are made and enforced by the same people or enforcement is neglected. We have 17 law enforcement agencies at the federal level. We need only three: Marshalls/FBI, Secret Service and DOD. Secret Service can do anything concerning taxes or licenses (like FCC), the Marshall/FBI can do all the rest and DOD will do everything, borders out (including border patrol).

Vigilante rule is on the rise. Folks no longer trust the courts to perform their duties. Hell, a rich white guy can get divorced then have his ex-wife come back into court in front of the same judge and get a total reversal. If rich white guys can't get justice, who can? Black folks in the intercities are using self justice (vigilantes) rather than using the courts and the justice system. As I said, self discipline has broken down in America.

> KEEP AN EYE ON TYPHOON TAUZIN, he's coming
> your way FCC!

I think the biggest mistake we make is not remembering the wisdom
of the founders. Policy making was to be Congress' responsiblity
while enfocement was the President's duty.

Enforcement should be seperate from regulatory power. There are
over 17 law enforcement agencies at the Federal level. Look, the
Secret Service could enforce all tax laws to include income, customs
and excise (guns, tobacco and alcohol). It could also enforce
regulations for federal licensing such as the FCC. This is on top of
its duties of protecting the president and the treasury.

The the Marshalls service and the FBI should be merged, with the FBI
being the CID of the service. DEA, forestry, Parks service and such
would also be merged. The Marshalls service then have responsiblity
for protecting all government buildings (Secret Service protects people).
Anything other than taxes or license violations would be enforced by
the US Marshalls.

DOD would have responsiblity for borders out. Merge the Border Patrol into the US Army. Make the CIA an DOD agency.

But remember, those who make the rules usually do a poor job of enforcing them. Either they are too heavy handed like the IRS or ATF or not enough like the FCC or FAA.

RS reimburses you a price difference if within 30 days (I always buy
a stuff when it's on sale. It's usual to see $100-$150 discount on
certain products).

RS Canada sells a card that gives you a 10% discount on anything from
regular price at $15 I think. If you buy something over $100, you
will get the card free.

If something is priced $400, you will able to get it $360 instead.

Many people don't know this... just a tip from "cutie boy" :)

>Brought it in again for repairs. This time the warranty ran out. So it cost
>me $120 to fix.

>Waited four months. Replace more chips, at my cost, no labour cost since
>under repair 90 day warranty. Cost me an other $90.

>I listen about 200 minutes for every minute transmitted!!

>My old 2nd hand Kenwood TR-7800 works great, never had a program.

I realize some of the RS stuffs don't work after a couple of days.
It happened to me a couple of times... but usually these things
happen in first 30 days and can be replaced very easily.

Make sure you buy an extend warranty on high priced products.
My HTX-202 went to repair for a couple of times and I got a new one.
If I had no extended warranty, my HTX-202 just became a garbage (202
comes only 90 day warranty).

>Here my brand new HTX-212 spending more time in the shop that actual usage!

I am using HTX-242. Seems it's working OK.

>I have a HTX-202, works great, along with my ICOM IC-02AT which I've been
>using 320 days a year since 1989.

>no problems with voltage, or swr.

> So why did the HTX-212 fail me twice?

you didn't have a luck.

>So next time, buy the extended warranty for Radio Shack radios.

depends on what you purchase though...

I don't buy any extended warranties on scanners... but I do buy it
on amateur stuffs.

>never again to buy a Radio Shack mobile.

My 242 is working OK. My 202 wasn't working OK.
kinda opposite eh ??

One true story here Jim.....

I was 11 years old and had been studying my code and theory for weeks. My Elmer, Carl, K7CUZ (SK), lived two doors down the same street and and was a teacher at our Jr High School, helped a small group of us Jr High School kids learn code before school in the mornings. After weeks of study, the big day came and I passed the code test no problem. Then the theory test was passed and I was one very happy kid. I ran right home and called my Grandpa W6DWC with the good news. He was delighted and shipped me a used transmitter the same day. The Johnson Viking Adventurer arrived a few days later, before the license arrived, along with the parts to make a 40 meter end fed wire antenna. So, I put up the antenna but was afraid to try it out because the license had not arrived yet. Then I saw an article in QST where someone was using a 50 watt lightbulb as a dummy load. Naturally, I had to see if my new transmitter would work so I soldered a 50 watt light bulb to a short piece of RG58 and a coax connector to the other end. When I tried it out, it worked great. The lightbulb lit up to medium brightness and got brighter when I tuned up the transmitter with the only crystal I had. Well, as kids will do, I started keying the transmitter and sending "practice cq's. I didn't have my own call yet so I used my Elmers call, K7CUZ. Sure enough...about 5 minutes after my first cq I got a phone call. It was Carl, K7CUZ. He wanted to know what I thought I was doint calling cq with his call. I explained what I was doing, with a bright red face, and Carl explained that my lightbulb signal was VERY strong at his QTH just 3 doors away. I apologized profusely and promised to leave the transmitter turned OFF until my license arrived.

Well, that's my story. Oh yes, the license arrived two days later and KN7RMJ was on the air for the first time with a REAL antenna.

Regards to all, hats off to all Elmers,

and particularly fond memories of Carl, K7CUZ

Frank...K7RMJ dit..dit

If we TEST them, they will not come. If we INVITE them, they will
come.
Believe it. Not many people are looking for using CW or anyway of
amateur radio communication as a method of communicating.

It is fortunate that old foggies who are in charge of deciding what's
required are becoming silent keys. The old day's thinking is NOT
valid in today's society.

Hello Trev!

Good to see you on here!
At least someone responded, eh?

Well, the lads doing the Trans-Atlantic tests with 19 sets don't
claim to be doing anything new or unique... I think they just want to
have a bit of fun with the old beasts!!

Maybe you can e-mail to them, and tell them about your similar
experiences back then.

Perhaps it's possible thoughth, that you didn't work, "19 set to 19
set" across the Atlantic back then, so this still MIGHT be a first!

Grin!

T'rah - Bry, G3XLQ / AF4K

(A Transatlantic type myself!)

David et al ... don't make the mistake of associating me with the
obviously screwball post that you quiote from above.

All I want is to modernize ham technical and licensing rules so
that the service may stand a chance of survival for the young
grandsons I just spent a week visiting.

So, Masa, what is the point of this irrelevant post??? Thought you stated in an earlier post that you were going to try to avoid more irrelevant postings such as this. Not sure what this has to do with rec.radio.amateur.misc

Brad,
You can't afford HF and don't want it. I don't see any need for you
to learn code. HOWEVER, I'm all for the code requirements for HF use, I'm a
Tech-Plus who is struggling to get to 13, and I'll do it, for my General
(already passed the theory). WHEN I finally get it, the work and effort
involved will make that license particularly valuable to me....

That doesn't bother me as much as the millions he is planning on investing in low orbiting satellite systems. His entry into celluar and satellite communications is the first step in a microsoft globally controlled communications network that could have far reaching consequences for amateur radio in that it will need a lot of spectrum to be profitable.

Bill Gates has always been a visionary but unfortunely his vision may not include Amateur Radio if it conflicts with his interest and affects his profit margins.

>at all, with modest receiving equipment.

>As a result, I think that fewer SWLs are exposed to the next step,

I think you are correct. I hope that the increasing number of inexpensive all-band portables that do have ssb capability will help reintroduce swl's to ham radio.

My introduction to shortwave, and ham radio, came from some unknown old console multiband radio. My older brother was interested in the new "stereo" music. To improve his speakers, he purchased a huge ol' something from Goodwill Industries, stripped the cabinet of the 24" speaker, pitched the woodwork, and somehow I got the electronics sans knobs, dial indicator, or any other incumberances.

I spent hours listening to tone packs, thinking they were airplanes and expecting the pilot to speak at any minute! Being very close to the Naval Sub. Radio Station, North Severn, MD, made for tuff listening! It was 1963.

That Christmas my folks gave me a Heathkit GR-91 receiver kit. My dad and I began assembly that day, and finished in a coupla more. What a thrill to have that beauty-- with hi-tech sliderule dial- setting on my nite stand. Sleep was banished from my life for the next several months! An antenna was strung out the window, up to the 3rd floor of the house, out across the roof, and at great risk to life and limb, attached to the chimney. This rig had a BFO, and I heard cw for the first time! And AM 'phone, too. Soon a Q-Multiplier was added.

I didn't meet my first Ham until 1969.
I was licensed in 1970.

KMB

p.s. When I came home from college one weekend to announce my engagement, the gift my folks gave me and my intended was a srereo amplifier kit from Lafayette Radio. Again with the all-niter as my bride to be and I worked straight thru to finish the kit by the end of the weekend! Trial by fire. Even knowing this dark secret about me, we were married 29 years ago. When I hear other hams mention a hostile or indifferent or jealous wife, I think back to my first ham station. It was on the nitestand, next to our bed!

I looked at the message, and all it said was that old excuses weren't working, so now they're trying some new ones. Oh yeah, that's a real "attack" that only someone as sharp as you would recognize as an "expert" opinion.(sarcasm intended)

But since you're so perfect, maybe I should proofread some of your posts from dejanews, including ones with the signature line that read "Drew in sunny central Florida."

Obviously, the band was *not* dead since the adjacent spectrum was filled
with strong signals. It is true that 75m is being used while 80m is largely
going begging for usage. The reason for that should be quite clear.

Message-ID: <19980102115100.GAA19081@ladder01.news.aol.com>
Source record: 182816

The only real problem I have with random wires fed directly from a tuner is
that you get a lof of RF in your computer on TX, and a lot of RF in your rig on
RX when you have computer and anteena feed close together, or you have anything
connecting the two such as a HAMCOMM interface, TNC, rig control interface,
computer-controlled DDS, CW keyer, etc. I use a 100 foot end fed wire at home
out a third floor window with counterpoises around my living room. It works,
but stray RF sometimes is a problem. The nice thing is... no feedline losses!
Also, you are not merely dealing with an impedence mismatcch,,, to a certain
extent you are also resonating the antenna, so you have fair multi-band
performance. Your ground system is of paramount importance with an end fed
wire, unlike with a balanced antenna. If you experience key bite or heavy RFI
especially only on certain frequenciies, your ground is probably at fault.
Good luck with the wire... it can be made to work pretty well and it's
certainly a cheap way to go.

ok then. we don't want it. please don't force us what we don't
like.

CW is obscelete. period. most people don't like it right ??
don't force us for HF access then.

It goes something like this..... No matter who makes it, every company
gets a lemon or two, or perhaps a run of them, in their line up.
It happens with cars, radios, etc.

I have owned 3 RS 202's and know of others that own them , and have had
little if any problems, shy of talking too much and needing to keep the
B.P. charged. I'd swear by them. But at the same time, I've had others
give me problems, and know of a guy who had an 2 meter mobile (not a RS)
in his car, burn up. He had it wired to the battery as most often times
do. The rig was only about 3 months old. He turned it and the car off,
went into the Post office for a minute, came back out to the car and found
smoke pouring out of the rig. The PC board had a hole the size of a 50
cent peice in it after all was said and done.

So, it's not any one brand, that has it's faults..... The ONLY RS rig
that gave me a problem was the 404. I had it for a few weeks, barely used
it one hour and the audio/squelch circuit defected. They replaced the rig.
Had no problems with the new one. Over a year now.

Hello

I have a TS-449-SAT with an intermittent in it. Here is what appears to happen.
Everything is going along fine and then the rx and tx becomes garbled. Shortly after you completly loose both tx es rx. Also sometimes you can hear the frequency scanning while the display remains constant. Sometimes the display is lost...Just dotts.

Anyone who can help please drop me a line at my e-mail address listed below.

Any help would be greatly appreciated.

I hope you're right.

I have been interested in radio for as long as I can remember. I
remember listening to my fathers radio with fascination that the thing
worked at all, and later building my own crystal radios from a radio
shack kit. I played with those things for hours every day.

However, it wasn't the shortwave bands that attracted me to the hobby.
Sure, they were fascinating to me once I began listening to them.
What I'm pointing out is that the interest was there before the radio,
not the other way around.

Inexpensive shortwave radios with decent performance don't hurt,
though. Still, I find that many new listeners don't understand how to
use the BFO adjustment knob on their radio to tune in an SSB signal.
Just read some of the newbie posts on rec.radio.shortwave...

Hi Roy,
Have you changed your battery lately? A friend of mine had a simular problem and he replaced the battery (It was dead) and it cleared up his problem. Im not saying its your problem, but you can check the voltage of the battery.
I changed my battery last year when my friend had his problem just for the heck of it.

Also, would you be interested in testing a program for the TS440? Im currently writing a program W3.1 (Soon Win95) to control the ts440 by a pc. You would, of coarse, need the interface from the TS440 -> PC.
Just send me a email and I will put you on the beta mailing list

PS: If you know of any feature you would like a program to do while in the communications with the TS440, drop me a note.

138. HamNet Forum on C from CompuServe

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-02 00:00:00 UTC
From: Scott Loftesness <sjl@firstdata.com>
Message-ID: <eUXUPQ5F9GA.304@nih2naab.prod2.compuserve.com>
Source record: 182825

The HamNet Forum on CompuServe is now available to anyone who has Internet access and
either Netscape or IE 3.0 or higher. In the past, you had to have a CompuServe account
in order to get into Forums. Now, as part of a project called "C from CompuServe" there
are over 500 Forums accessible from the World Wide Web, including HamNet

HamNet is one of the oldest communities of amateur radio, shortwave listeners and
scanner enthusiasts in cyberspace. Begun in 1981, HamNet was one of the first "forums",
or online discussion groups, on CompuServe's original "MicroNet" service. Today,
HamNet has 23 message sections and file libraries, covering all aspects of amateur
radio and related electronic hobbyists interests.

There are three levels of participation available with the new "C from CompuServe"
service. Guest Membership provides read-only access to the HamNet message board, and is
free.

Limited Membership is also free, but allows you to enter some of the CompuServe
transactional areas and databases. You download a "Virtual Key" plug-in for your
browser that allows CompuServe to recognize you. In addition, Limited members can pick
one Forum for full participation at no charge. In other words, if the only thing on
CompuServe you're interested in is the HamNet Forum, Limited Membership means you can
fully participate in HamNet, but only HamNet, for free.

Finally, Full Membership allows complete participation in all 500 Forums, for a monthly
fee in the future of under $10. However, during the introductory period now underway,
Full Membership is also available free of charge with a 30 day notice being provided to
you prior to the monthly fee being imposed.

To check out the HamNet Forum, point your browser at this url:

http://www.csi.com/go_c.asp?PIN=HamNet

It'll try to recognize you and then deny access unless you have Virtual Key (IE4.0 for
the Mac comes with it), and take you to a signup screen. You can either select "Free
Preview" for read-only access, or download the plug-in and sign up for membership. Full
membership is now being offered with the free trial mentioned earlier

Please send me an email if you have problems with it, or there's something I can help
you with.

Scott Loftesness W3VS
Chief SysOp, HamNet

For what it is worth I HIGHLY recommend DX4Win. I have used DXBase (not the new Win95 version), LogWindows 3.0 and EQF. All of the other programs are good, but in my opinion, the best overall is DX4Win. It is only $69.95 and the best part is that updates are FREE and downladable from the DX4Win Home Page. The support is GREAT....they realy work to help you and they are fast and easy to communicate with.

DXBase was good but VERY expensive....not only to purchase initially, but to keep up to date. They update it religiously 1X per year at a cost of about $49....that adds up quickly. EQF is VERY good and an excellent value for the price and service is good.

I love DX4Win and am using it with Windows 95, even though it is a 16 Bit program....I hear they will be coming out with a 32 bit version in the future.

Hope this helps. BTW, I am Not associated with DX4Win, DXBase, EQF in any way, just an avid Ham.

I usually stay in Richmond, In. It's about a 30 minute drive, straight shot to Dayton on I70. There are about half a dozen hotels/motels there, and they usually don't fill up. Also, the campgrounds in Dayton don't get full this early...you might consider that, since the weather is nice in May. The hamvention web page has the info. (Man, why did you have to bring this up? Now I can't wait). 73 KA9YZB

What difference would it make if you obtained the general
and never passed CW? If you wanted to then operate 13
(or any speed CW) wpm what would stop you from learning
it as you go (i.e. on the air with other CW users)?
Are you so unsure of your interest in CW that you
must be forced to pass a 13wpm test first before
getting the license rather than doing it on your own?

I want to buy a Yaesu FT-50RD radio. I have an ICOM W32A that is
only 3 months old to seel or trade. If anyone is interested then send me
E-Mail nd I'll give you the phone # to contact me at. If anyone has a FT-50RD
for sell that doesn't want to trade then let me know I am still very
interested in this radio. thank you 73

perfect example that the CW requirements won't make the good hams.

Even extra class amateurs aren't so good eh... what should we do
about it ?? 2m repeater users [technicians] are much polite.

You are not mature or intellegent enough to know what is good for you. As your mother once told you to "eat your vegetables", now, we tell you to learn the code. You should be thankful for our guidance in this matter and not so given to disobedience and rebellion.

> CW is obscelete. period. most people don't like it right ??

You must learn the correct spelling of obsolete if you are not bright enough to use the spell checker. These are just the contunued whinings of a disobedient child who cannot get his way.

> don't force us for HF access then.

To learn CW is not necessarily for the purpose of knowing or actually using CW. It is to learn discipline and not give in to the easy way out. Students who take endless quarters or semesters of calculus and other math courses will probably never use all the details they have learned but mathematicians tend to be the most employable of all graduates from Universities. When prospective employers are asked why?, they say that these people are the most logical in their approach to problem solving. They apply their discipline to all their problems and situations. If you are "forced" to learn the code, maybe you will apply this discipline to learning and expanding in a field of your liking. You simply have to stop whining about doing something you don't want to and realize that it could ultimately be for your own good.

Please don't take this post as onother biased and rabid argument for (or against) continuing the morse code requirement. This is not meant to be more vitriol. I am just trying to prepare all us practitioners of the dark art of CW to accept the inevitable. After all, Morse code is pretty old-fashioned technology. It is an arcane art mastered by only an elite few. There are many more efficient modes than CW, and CW holds back the progress of Ham Radio technology since it doesn't require upgraded protocols and hardware/software implementation every few years. It is not fair to force those with no interest in this outdated art to master a skill that it literally takes weeks of hard study to learn. A lot of new hams are intimidated by the code, realizing what a useless but insurmountable obstacle it is, and so the code requirement has not only kept new blood from getting into the hobby, but it has also kept Technicians with a lot of time and money invested in Amateur Radio from progressing. We need new blood into the hobby, and we can't afford to let us elitist traditionalists stand in the way of progress. I therefore back down from my previous position that the CW requirement must stay in effect. However, we must prepare ourselves for the consequences of dropping CW.

When (not"IF"... the day will come. the question is WHEN) the code requirement is abolished, how many new hams will bother to learn the code? About the same number who build their own rigs now, i think. After 15 or 20 years, the majority of even Extra class licensees will be no-coders. Once they are a not so silent majority, somebody is gonna wake up to the situation with the overcrowded fone bands vs the still peaceful non-fone bands and say "Hey! That outmoded old CW stuff went out the window back when the Coast Guard stopped guarding 500Kc! The FCC finally acknowledged it when they dropped the code requirement and I could get a lcense, too. We still got these old foot-dragging, progress-hating brass-mashers hogging up all the good spectrum. Let's get it!" Then the feds will bow to popular opnion and open all the bands up to fone ops once and for all. After all, the majority will be in favor of it, and treaties be damned. I am uncomfortable with the idea of hearing fone guys complaining about my beedly-beeps interfering with their QSO on 14010. but I guess I'll just have to roll with the tide and become a mic worshipper too. I'll make a nice plaque for mounting my favorite key on. It will make a nice display, adding a touch of old-fashioned charm to the shack.

With the bands completely opened up, I predict an increase in the number of ops who memorized the questions to pass their license exam and really don't know too much except maybe where the band edges are and how to trim a dipole. When we have reached this point, by and large we WILL be just cb-ers who can install our own equipment without help.

When we have reached THIS point, may as well not have an exam at all. Many clear thinkers of that day to come will insist that the testing requirement is totally irrelevant, as are multiple classes of license, since anybody can

memorize enough to pass whatever level of license they desire. The majority will see the logic, and the feds will be forced to act again for the betterment of the hobby after dragging their foot for a few years. RTTY, AMTOR, Packet, and all the other data modes along with CW transmissions, will be outlawed. Data is more efficiently transmitted over the internet anyway, and the modes will just require too many old-fashioned, antiquated skills. Finally, all those interfering "beedle-beedle-beedle" and cricket chirping sounds will be eliminated, and it will be just talk, talk, talk. That complicated stuff has no more relelvance in modern communications than spark! Want nostalgia? get a jungle drum.

Mail-in no-test licensing will be convenient, and popular, and will bring in hundreds of thousands of new hams. Finally, the amateur bands are almost as free as God intended them to be! Freedom to express yourself, freedom of speech, long repressed on the bands, will be joyously celebrated by the downtrodden who have fought all the long years to throw off the heavy hand of the FCC and those hateful, elitist pro-exam nuts. The QRP homebrewer fanatics will be silenced by a very sensible law requiring all equipment used on the air be type-accepted, i.e. made in a factory where the manufacturer can ensure that no skill is needed to get on the air and talk, talk, talk. Band selection should be automatic, and power level set at the maximum the built-in power supply can handle. An HF all-bander will have a thousand preset simplex channels for the auto-propogation channel-picker-outer to choose from. The only user-adjustable control will be the on/off switch, the "volume" knob, and the push-buttons for background music and sound effects.

Finally the big day will come. The courts will recognize that everybody, licensed or not, is entitled to equal use of the amateur bands. FCC licenses will continue to be proudly displayed by the old-timers who had to take a 10 question true/false test to earn them. The same old-timers will collect such curiousities as Volt-meters, grid dip meters, oscilloscopes, soldering irons, and the like, and as they die the newest craze, collecting antique ham gear from the pre-freedom days will take off. The FCC, in alarm, will impose heavy fines on posession of old fully user-adjustable transceivers and transmitters that have not had their finals removed and connectors filled with a type-accepted epoxy based compound at an authorized factory.

New employment opportunities will open up for practitioners of the dark arts. There will be a big demand for technicians who know how to plug everything together and make it work. These radio experts will take care of all the really mysterious stuff like installing a station GND, whatever the hell that stands for, and connecting an antenna properly. Once the radio nerd is done, paid, and gone, the proud station owner will have a station capable of transmitting a signal clear to the other side of the globe... of course with all the QRM nobody will understand the words, but it will still be comforting to know that one's voice can help contribute to the joyous unintelligible babble all the way in Ulan Bator. Radio will truly be making the world a smaller, friendlier place!

Finally, the day will come when some ham, browsing through an antique ham radio shoppe will see a dusty old set, one of the really old ones ordered disabled by

the FCC because the continuously variable tuning permitted off-channel transmission. The ham of the day will notice an opening on the back panel cryptically labeled "KEY",and wonder why the ancient, long dead owner though it was necessary to lock up his AB.

Mprse telegraphy was originally meant to be used to punch holes in paper tape, which would then be read by eye with the use of templates. Operators quickly learned to copy by ear, even before this new-fangled telegraph idea really got off the ground. The sounder was born about the same time as the first long-distance (out of earshot) telegraph line. The paper punch idea was discarded for the next hundred years or so except in player pianos.

You may have noticed that all really really old keys have two sets of contacts... MAKE and BREAK. I would assume ... well never mind what I assume.

"ENGINEER'S MINI-NOTEBOOK, Communications Projects", by Forrest Mims III, Radio Shack, has a simple electromagnetic sounder in it that uses only MAKE and GND. Maybe the BREAK circuit engaged a damper that stopped the sounder vibrating? or maybe the BREAK simply ensured that the armature pulled away from the sounder plate, or maybe there were two sounder plates. Need to examine an antique sounder or do some reading.

If you have ever used an antique key with the extra contacts, you probably were intrigued by the extra clack of the BREAK contacts. It sure does sound nice once you get used to it. Kinda sounds like the telegrapher on the really old westerns. At 20 WPM it sounds like you are really flying if you disable your side-tone and open the contacts up enough to hear them good.

By the way, they wouldn't have called it CW (continuous wave) since it was DC. The term CW did not appear until well after the dawn of the fadio age, when the birth of the oscillator spelled Spark Gap mode's eventual demise. CW, DC

telegraphy, and Spark are all on/off modulated with Morse Code, yet they are completely different modes and the term CW applies to only one of them.

As far as difficulty in learning goes, I doubt that it would be much more difficult to learn Morse telegraphy with a well-designed sounder than with an oscillator. It's just whatever you get used to first, I think.

I do not have my license yet but am looking forward to getting it while
i furiously practice my code. And above all other aspects i do belive
in the morse code. In fact i dont plan to use ssb for quite a while
and i am going to build my own equipment(qrp). I see multiple reasons
to use code to other methods, code uses less electricity so in emergency
situations you can save your batteries and probly run a transmitter of
one of the 12 volt solar battery charges. Code gets though in
interferce, which if you are using HF you will encounter. Code is
understood internationally, ssb isnt much faster when you have to use
phonetics. There are probly thousand of other reasons to learn it that
arent mentioned here.

As far as I know, the company called "MIZUHO" makes a 20m HT as well
as 6m (ssb and cw only) and 10m.

it works quite well according to some users.

The only problem I see Bill is where does it end? I'll grant you the above, but couldn't we make the same argument about the questions on the test, Why should one answer questions about packet, SSTV, RTTY if he/ she never intend to operate those modes?

Why do I need to know how to calculate a 1/4 dipole, since I'm going to buy one at the ham store? I don't really need to know about the Q of a circuit since my rig has all broadband circuits. It would just go on and on until their is nothing left, it perhaps is outdated but it does at least make one work hard to get it, and those are the ones I want joining the hobby, the ones that want to be here, not just those who could get a ticket because it's easier now.

I'm quite sure there are many many questions on a Bar exam that a lawyer will never use in his practice, yet they are still there, while in college I must take electives that have NOTHING to do with my course of study, why, because the whole idea is provide a well rounded education. If we apply this 'no code' argument to these other 'testing' senarios there wouldn't be much left because there would always be someone who didn't want 'THAT PART'

Regards,

Tim

I'm sorry to have to point this out, but what language are YOU encoding into Morse Code? Is it not English? If a foreign ham understands "rig" and "antenna" and "temperature" when spelled out, will that person not also understand it when spoken? If we use the "standard CW shortcuts", would they also not be understood over phone?

You are entitled to you opinion on the code-test issue, but please find a better reason then the foolishness above. CW is NOT a language. It is an encoding scheme added on top of language, and is no more understandable than the language being transmitted.

Does the First Amendment to the Constitution of the United States of America which guarantees the right of free speech, give someone the right to shout "Burt Fisher," in the middle of a crowded ham-fest?

Just Curious.

Actually it's covered under the same paragraph which gives you the right to
shout "MOVIE!" in the middle of a crowded firestation.

I have no intention of slamming MASA due to his spelling. However,
I find his diction very poor, and considering that he is not
speaking, but instead is composing, one should expect a higher
quality of posting from him than something written "off the cuff".
If one cannot enunciate his ideas efficiently, how can one be
taken seriously?

I have both a 202 and a 242.....
The 202 is GREAT.. excellent receive..
The 242 is just too dam broadband on receive...
I receive the local ambulance on the 147.165 machine here in town.. I wish
the 242 was narrow band like the 202.... Also sensitivity is poor on the
144-148 mhz area... Hell I got the 3 year contract... Might as well slap it
on the counter for them to look at....

All said and done the Radio Shack radios are good.. as far as I am concerned

I agree 100 percent with jeff@centuryinter.net. We don't want all these tackey "NO-CODERS" crowding the SACRED HF bands. Don't you know if "WE" (ARRL) let em in they might do somethin to upset all them old farts at ARRL. So jeff I am asking your help to start a campaign to REQUIRE all applicants for auto driver's license to demonstrate their proficiency in HORSE-BACK RIDING before they can drive a car. You do know how to ride, don't you jeff???
The "code must go."

There is NO REQUIREMENT that hams be "technical". Being technical is a
CHOICE. Hams can be technical if they so choose, or not technical if they
want to go that route.

Using your "I shouldn't have to take a code test, because operating code
is an option" standard, theory examinations should likewise be eliminated.

>I admit that today's tests don't do a very good job of assuring even a
>modest degree of technical competence, but that's a different problem

Fix that problem first, then we'll talk.

You probably have a point there, but what else can you expect when you
make it so easy for the cb types to obtain a license.

Grettings Ray
You are partially right.
During the pre-70's, most radio enthusiats got their exposure to 2 way radio via amateur radio.
During the 70's and 80's, most got their exposure to 2 way radio via cb.
During the 80, plus, most radio enthusiats are getting their exposure to 2 way radio from cb and scanners. Scanners are giving them exposure to above 30 mhz not necessarily below 30 mhz.

I, personally, believe that that is why sooo many radio enthusiats are are cb or above 30 mhz oriented.

That fact that we are currently using ssb may? be a controlling factor.

Cost might be a controlling factor as well, an hf radio $2000 and vhf radio 500ish, a cb under 100, a scanner?

Also most radio enthusiats don't relate cw to being a via communications mode since there has been soooo much negativizm thrown at it. Most amateurs, who use cw, can see/hear it's benefits, however most no cw users can't. That is another reason why amateur radio is not as popular as it was before.

Hi Jim
First happy new year
Second I must admit I kind of agreed with your concept of curiosity.
For me curiosity about crystal sets, radios (kits etc) and the idea of
amateur radio, I was also between 10 and 16 at the time, encouraged me
to become an amateur. To me, amateur radio was just something I had
to get. At first I couldn't see the need for the morse code until I
used it for a few months and its value slowly became apparent.
I tried ssb, for a while, but didn't like the click that were around,
so I went back to cw. During the early 70's, I joined up with the 2
meter fm crowd and became heavily involved with volunteer work, both
on and off the air. When packet became standardized I went over to
it.
I have been involved with the internet now for about 2 years, waiting
for amateur radio to rediscover itself and continue its technical
growth.
I personally believe that cw is a major benefit to hf operating and I
will be very much saddened if/when cw is not part of the hf amateur
exam.

I don't think so, RC. I think this time, it's different. I think something
happened that directed a lot of people to amateur radio that should
have been directed to the FRS or elsewhere. Now the American
welfare mentality has kicked in and the masses who are not really
sure why they are here are being prodded to scream for more. The
internet has provided us a medium by which we can argue with and
prod other people whom we could never argue with or prod before.
This is the right place for the sheep to come meet the shepherds.

I have never met more disoriented, disinterested people than the
ones who are entering ham radio right now. Questionnaires distributed
at local 'ham club' meetings asking about people interests in the
hobby come back blank. I agree that most hams are eager and willing
to help newcomers - I just don't think there are many newcomers
with enough interest in amateur radio that want to be helped. Nobody
wants to build a dipole anymore, they'd rather buy one from Gordon
West for $89.95. The fascination with the 'magic' of radio has
disappeared, and without the fascination, so has the interest. Anyone
who says the no code tech license has not caused people to flock
from the citizens band service to amateur radio is totally blind.
I don't mean to imply that anything is wrong with people from the
citizens band service, but the CB'ers I have met with no code tech
licenses have no idea why they are here and seem to lack the very
basic interests that use to bring people to the amateur service.
Our ten meter net from the local 'ham club' here recently disappeared,
and when I ask somebody where it went I was told 'Back to 27.645'.
When I asked why, 'More people to talk to'. These people had no
business wasting $6.00 on a ham license test in the first place.
A little more investigation revealed something totally amazing. These
guys actually think that if they caught on 27.645 with a linear, the
ham ticket is a get-out-of-jail-free card. I don't know who started
that rumor, but Billy Graham would probably like to meet him.
What a great reason to get a ham license.....

I honestly think that if you open up 20 meters to no code techs tomorrow, you will never see more than 5% of them on HF anyway, because they aren't motivated or interested enough to got put up a dipole and buy a radio. Eighty percent of the five percent who would show up on HF are already operating there now, irregardless of the fact they are not licensed to do so, probably because on some nights they find 'more people to talk to' on 20 meters than they do on 27.645 and they already have the radio.

The noise you see here is just that - noise.

Two classic examples.

Carl, WA6VSE, AKA Squiggy. Has had a tech license for 25+ years. Says he is dying to get on HF to do exciting digital experimentation that he can't do on VHF or UHF or anywhere else. Says he passed the CW tests years ago. Says he's an engineer, and has forgotten more about electronics and theory than most hams will ever know. Says he's an experienced HF operator from his days across the border in Mexico. For two years he has been in the newsgroups preaching the no code hardline, swearing, calling people names, insulting everyone who doesn't agree with him. If Carl was REALLY interested in getting on HF, he'd be there. He has all the qualifications. He's not interested in ham radio - he's only interested in making noise.

Len Andersen, AKA Grandpa Lenny. Old dude. Old as dirt. Years and years of commercial and military radio experience, or so he says. Quotes Microsoft Bookshelf and the CIA factbook with a flick of the wrist and a click of the mouse. Preaches the government shouldn't tell us what to do hardline. Expert in BBS messaging technology, refers to everyone by their last name as he apparently thinks that is cute. Very interested in radio, or so he says. Knows everything there is to know about radio, has built, tuned, and operated in ever commercial radio service know to mankind. Been whining in tune with Carl in this forum for a long time. Same whine, different day. Longs for the terrible government of the United States to grant every human being their God given right to the use of the HF bands without taking a CW test. But yet he doesn't even have a license. Not even a no code tech license. Nada. I honestly think that if the amateur radio service was abolished, Len would be much happier than if no code HF privileges were granted - he's not a ham so he has nothing to loose. He's not interested in ham radio - he's just interested in making noise.

We use to argue with the new guys, make fun of them, and then climb up on the roof and help them put up an antenna we'd made for them. These guys don't want antennas - they aren't interested in ham radio.

I GAVE an HF radio to a no code tech. I made him an antenna. I gave him some coax. I put the antenna up for him, and showed him how the radio worked. He gave me the whole works back a week later. Boring. Would rather watch TV. No interest. Why this guy is a ham is beyond me. Take an HF radio to a HAM club meeting and see how long it takes to give it away....

I'm sure a lot of new hams or people who are thinking about ham radio are confused by what they read here. People who are hams who come here looking for something interesting or constructive about ham radio don't usually stay here for long. Most things constructive that do get posted here get put into the 'no comment' file, as the usual group of noise makers aren't interested in anything constructive and the people looking for anything constructive are long gone. Anyone who doesn't know what ham radio is that comes along and reads this stuff would think hams are all a bunch of screaming idiots.

No code, pro code, coded, uncoded, whatever, what goes on here does no good for amateur radio whatsoever. Nobody is going to win. Everybody is going to loose. One of these days somebody who is holding the chain is going to get very tired of all the noise and simply pull the plug.

Anyway, RC, go away and come back in two years. I can assure you there will be one thing here that you will always find. Noise. But it's not the same noise, it's a much different kind of noise and I think it will be the last noise that ham radio makes.

We tried, Cecil, but it was so damn windy the DAHS kept blowing away.
DITS worked OK, not as much wind resistance..... Good thing we still
had that long, underwater, fiberoptics coax going to Hawaii - just used
the antenna over there.

Well we certainly seem to have some opinions above but I can only
speak for myself.I got one It went on sale 299. I think ? some time
last year. I like it for the money I spent.The only problems Ive had
at all is that the frequencies that I have in memories ie local
pd,fd,a simplex and a repeater accasionally get lost. BUT this may be
something that I am doing wrong in programming. The reason I bought
this (despite that I think that rs is over priced and under featured)

is that it was cheap and repairs cant be worse than all the rest of
the radios on the market (all the time in and waiting for expensive
parts). So bottom line I lke mine Would I trade it for anything else
NO. see ya

I read in an old qst, about 20 years ago, that many non english
speaking countries, when they teach amateur radio to their club
members, also give them some elementary english leasons.
Also, I has been indicated on various newscasts, etc, that English is
the general language of international radio.

I find it interesting how so many pushers of dropping the code want
such detail in why we should learn the code.

Several years ago, at an amateur radio display, I met a fellow who was
going for his Canadian basic licence. He was adament that he would not
be using cw. The following year, I met the fellow, again, at the same
display and he told me he was preparing for his 12 wpm endorsement.

I asked him why, since he seemed so against the code. He told me that
after being on vhf, etc, for a few months, he soon got tired of the cb
like operating. He chatted to a fellow club member who suggested he
get his cw endorsement. He did. He tried ssb but was disatisfied
with what he was hearing on ssb, so, he is went to cw and is now
practicing for his 12 wpm so he can use 20 meters, etc.

He also told me that he is also helping his amateur radio club by
helping to teach the code and providing code practice, at the club.

I had the same problem before but I, hope, I found the cure.
I don't know your station layout but try this, Arrange it such that
your antenna comes in from one end of your station. Put your antenna
coupler and transceiver at the same end of your station. Put your
computer(s) and monitors as far away from you radio equipment as
possible. This should help to reduce the co-interference.

I realise that possibly I should not be adding my two cents worth here
but I thought I might consider it.

Your comment at the end.

>coders: I thought CW made good amateurs !!

I my opinion you missed the meaning of the phrase. Before you lay
blame to cw for the rest of the text of your message, why not copy
some cw for a while. You might find that the average cw qso is much
less garbage mouthed than you might think.

Just because the person has passed the cw exam does not mean that he
will keep his language clean. If you listen to cw conversations more
you may find that they are far more oriented to the way that amateurs
used to communicate and I suspect that most amateur do communicate..

Fortunately, the subject is not in your hands for a decision ... we don't
HAVE to convince YOU ... only the government. If they do their job and
act responsibly, rather than abdicating to the ARRL as they have done in
the past, changes will occur ... get used to the idea ... you'll have to
live with it.

BEST 73'S

SIMON

Simon, a grounded screen or metal barrier of some kind seems to help sheild
stuff a little bit if there is no room for good physical seperation. RF
chokes on Serial and Parallel cables, monitor and mouse cables, and power cords
can help. end-fed wire antennas pick up from and radiate to computers and
monitors also. I am using an end-fed wire at home, and I have problems even
with shielding and other RFI precautions. You just gotta do what you can and
tolerate what you can't get rid of.
You can get clamp-on ferrite chokes for a couple of bucks that sometimes help.
Remember that your monitor is sometimes worse than your computer for making
noise.

The ideal setup, which I can't afford and so far have been too lazy to build,
is a 19" rack setup. You can even get made-for-19"-rack computers and monitors,
though they cost a bit more. The military uses a lot of stuff like that partly
for space saving and physical security, and partly for ease of shielding. How
much shielding does your monitor have? not too much. The box has some, but
could be better.

If you run digital modes, it is really tough to keep stuff from interfering
with your other stuff. Shielded cable for connections to FSK ports, Serial
ports, mic and key jacks, etc really really helps.

Well, this is an irrelevant, out of topic subject but it is better than the pro/con CW flame war. Here's my stupidest one:

A rope enters a boar and orders a beer. The bartender sez: "Hey, beat it, buddy. We don't serve ropes in here." Dejected, the rope leaves. Then, he gets an idea. He ties himself into a bowline, unlays and frays his bitter end, and walks back into the bar.
"Heeeeey! You look familiar! Aren't you that rope I just ran outta here?"
"Nope. FRAYED KNOT!!!"

Jim (K4PPK)

sounds like a great homebrew project! You could easily build a nice outboard
"voxbox" with a lot of nice controls like variable hang time, audio level
threshhold, VU meter, variable gain, switch back to straight PTT, maybe even a
filter to keep background noise from causing VOX to key the PTT when there is
no speech. It should work great for most other solid state rigs w/o VOX.
I use the TS-50S for my main rig, but personally, I don't work fone and so care
not a bit about VOX, but I like to see us hams make stuff. I bet it would make
a popular article in QST or CQ.

Tony, hams, while usually eager to help the newcomer or the wannabe, argue a lot with their peers. It's just a fact of life. That doesn't mean we don't all like each other and cna't usually get along. This CW debate is just a continuation of the AM/SSB debate, which is a continuation of the Morse/Fone debate, which is a continuation of the Spark/CW debate. Hams have argued for and against RTTY, for and against accepting the cast-off HF bands that the LF and MF commercial guys thought were useless, for and against CW from an electronic keyer or a keyboard, I could go on and on. Don't let these sometimes childish and over-spirited debates sour you on hamming or even upgrading. Most of the loudest and most obnoxious voices on the newsgroups or on the air are just the nicest guys you ever met when they are within punch-in-the-nose range of each other. We sometimes forget, I think, that there is a real live human on the other end of the link. Even us CW ops are not immune to this depersonalization... the only reason CW ops are so polite on the air is because it takes longer to send rude comments, and therefore is not worth the effort for the tiny bit of satisfaction such rudeness brings! Hey... now there's a pro-CW argument I never thought of! See... there I go again!!!

Charles, I am very pro-CW, but a TNC CAN pick some signals out of the muck pretty well, especially with a good DSP implementation for filtering. It is easier for the machine to pick out data when there is a constant tone that is shifted in frequency. CW is on/off, and while detecting the ON state is pretty easy, detecting the OFF state is tougher. How do you determine whether the apparant OFF bit is a true OFF or just fading, for example? does that apparant OFF state acually exist, or not? One state is ambiguous while the other isn't. On the other hand, MARK/SPACE determination is easier for a TNC, and this task it does well. If neither Mark nor Space is detected, It can be assumed that neither state exists. Maybe I'm not explaining this clearly enough, but anyway, a really good DSP loaded TNC can indeed do wonders with FSK signals down in the noise, and compares favorably with the trained ear doing CW, which TNC's ARE still a bit shaky on Even ASCII and RTTY jump right out at your screen with a really good setup, and the error-correcting "cricket" modes of course do even better.

Ham Radios For Sale!
HF Equipment
I have a Kenwood TS-430S in like new condition. With mic and
internal filters! This rig also has the FM board in it for working
those great 10 Meter repeaters! It has a general coverage
receiver for listening to Military and Maritime traffic. It has been
professionally modified for MARS/CAP and WARC bands.

HF Equipment
I also have an automatic antenna tuner. It is a Kenwood AT-250
and is a matching set for the TS-430 listed above. This will tune
almost any antenna to work where ever you want it to. Also in
like new condition!

VHF All Mode!
I have an Icom IC-290H 25watt all-mode 2 meter rig. This is an
older rig but works great! This is one of the radios that was built
to last. It has FM, USB, LSB, and CW.

If you are interested please send me some E-Mail at the address below
and we can discuss pricing. Or check out my web site ad - the URL is
also listed below!

This isn't a japanese newsgroup. It is an english newsgroup. While I understand the issues associated with gramatical composition in foreign languages, the fact remains that you are participating in a written, not spoken, forum, and thus have an opportunity to read what you write, and make adjustments as necessary. I don't flame you due to your spelling or diction (even the best of us slip up sometimes), but I am telling you that your "ESL handicap" nonetheless, you still look ignorant when you can't form a cohesive paragraph.

Somebody buy Cutie Boy and Rambo a set of code practice tapes so we
don't have to look at this thread anymore.

Cutie, it is not within the Amateur Community, ARRL, or even the FCC's
authority to do completely away with the code. And we will not have
that power until the ITU does away with the requirement. I know you
already have been told that. So PLEASE whining and call you
congressman! He/she is probably the only person who can have influence
on an international issue such as this.

I believe you are referring to "Club Libertel."

I talked to the person who is responsible for this club [freenet]. I
was looking for the freenet when I arrived Montreal and I couldn't
find one. I saw Club Libertel was looking for volunteers for
organizing the freenet... I saw it in the university newsgroup.

I contacted them and told them I could help... and la la la la.....
well... what I found out that many people weren't interested in
volunteering the Club Libertel. As a result, they became corrupt.

>and hamfests, or even the existence of ham clubs. Sure, those
>announcements won't reach a lot of people, but considering how little
>effort it takes, it is shocking that these things aren't being used.

true.

> It's
>the local newsgroups that will reach new people, not the amateur radio
>newsgroups where people have to actually know about the hobby in the
>first place. But I don't see the Montreal ham clubs, and many of them
>are already on the internet, even using the rec.radio.amateur.*
>newsgroups.

actually I advertised my amateur radio web page and my study guide
etc., in can.general and such.

>And when amateur radio does get mentioned in public (ie away from the
>closed societies of the newsgroups and the clubs and amateur radio itself)
>too often the message is from the standpoint of someone who already knows
>about amateur radio. If you look at it from the standpoint of not
>knowing anything about the hobby, you get a different picture. Things
>that aren't important to the beginner get thrown in, and things that are
>obvious to hams don't get mentioned.

also too is... that the publication isn't available from local
bookstore (electronic section). well... RS has some of the
publications, but limited...

>Amateur radio, in both Canada and the US is easier than ever to get into.
>In both countries, that great wall, the code, is no longer a requirement
>to getting started.

> I'm not sure there is a need for more people to
>join the hobby.

internet is kinda almost free [or unlimited_access available] in north
america. it's not free in japan (because you have to pay for local
phone calls... about 10 cents a minute). that's what you want to
consider as well...

> I know that once things started on that path, the need
>for more people became a necessity, because by changing it from
> a technical hobby the need to justify the ham spectrum became dependent=20
>on lots of people using that spectrum.

> But there are a lot of things
>not being done that would bring people to the hobby, instead of resting
>on the hope that no code and simpler tests will make things better.

I could do one thing. I agree. That's why I wrote the study guide
for both amateur and professional. I see at least 10 downloadings
each day and I am happy with it. For the professional study guide,
I included how one can take a test and so on. We must have some
kinda instruction or publication nearby...

In general, the people don't want to spend 100s of hours when
something else [which is cheaper and more efficient] is available.
That's one of the problems.

I have owned a RS HT-220 for years now. I prefer it over my Alinco HT most of the time.

Do not try to modify the Radio Shack HT-220. I have read too many horror stories about those who have tried.

I am a U.S. Navy Electronics Technician. I have gone over the schematics for the radio. There are no "SAFE" mods to be accomplished. I know of two people that have tried a "Safe Mod" on their radio. They both were destroyed. Radio Shack had the radio built this way on purpose.

>
>I don't know if they make one for 160m, but worth while to look at.

Mizuho doesn't make 160M HT (they DO make 3.5 MHz SSB/CW HT but it is
design mainly for coverage in 3.5-3.6 MHz range, the JA band, so use
in north america is limited to CW).

Long ago another company AMERICAN STATES ELECTRONICS manufactuered
a HT called "MM-2C". It is SINGLE FREQUENCY 5 watt LSB hand-held
which can be configured to operate on a frequency between 1.5 and
about 10 MHz. The 455 kHz IF (using Collins SSB filter!) limits upper
frequency range due to image issues.

The HT is *VERY* large by modern standards (over 1kg), and long since
out of production, but it does fit the definition of 160M HT if you
set it up in the 160M ham band.

The unit I have is complete but not operational; it is one of my "projects"
for future!

Never heard of that... I cut four diodes (D10x... can't remember) and
it works. Even in BC (88-108) transmission is possible in NFM
(although no power regulation available any more - constant 15wtts).

Visit no code international's web site. They are basically created
and maintained by US "EXTRA" hams. Check the call signs on the
no-code international's web site (through http://www.qrz.com or some
other ways).

I signed in and I hold a code also. You don't know what you are
talking about and that's the problem for pro-coders nowadays.

> LETS HEAR
>FROM THE " THOUSANDS OF NO CODE SUPPORTERS ".. WHERE ARE

It sounds to me like radio enthusiats want access voice only on the
amateur hf bands. In the vast majority of anti-code comments there is
no comment about 'I want to be able to use packet or amtor etc.
There is, however, lots of references to the voice used on 80 and 20.

Is this true?

I am considering getting a Chevy Venture and was wondering if anyone out there owns one. If you do, do you use it on 2 meters and have you had any problems running it mobile? I have a Yaesu Ft-3000m that I would run at 70 watts. Any problems with higher powers like that? How do you like the van in general? Any problems? Would you buy one again? What do you like about it? Any replies on the above will be greatly appreciated.

You have got to be joking. Excellent electronic technicians do not give a rats ass about Amateur Radio.

So that argument is as stupid as having to learn code to be a good ham.

What a bunch of chickenshit losers we sound like to the rest of the world.

Give a real test instead of giving the damned answers, then the REAL whining will begin.

I am doing research on consumer electronics products which came out during the late 60s to the mid 70s. In particular I am looking for articles appearing in radio and computer magazines (eg. 73, QST, Byte, Kilobaud, Popular Electronics, SMPTE and IEEE magazines) which discussed television sets using ON SCREEN parameter displays indicating volume, brightness, channel etc., for example, by using video graphic bars, broken lines, and/or alpha numeric characters. I will pay $3.00 each for any articles which I feel are useful. Can you help??? You were saving those old magazines for a reason---here it is! Thanks, Please reply directly to: mikemari@ix.netcom.com with a list/description/date of what you have. Happy New Year, Mike

> ^^^^^^^^^^^
>a minute.

Sorry, Masa, been listening to too many JA's and BY's on my HF radio.
Starting to suffer from a case of broken typing.
You, of all people, should be correcting other peoples English on Usenet....

>please explain what you mean by 5 WPM license is no code.
>You don't know what you are talking about and that's the problem (of
>pro-coders).

Try talking to somebody at the rate of five words a minute. See how fast they fall asleep. We are talking about Morse code here, right Masa ? Turn your radio on 14.002 and give me a call, we'll see who knows what who's talking about.....

>>Can't Get It UP ? - Join NoCode International and Help Destroy Ham Radio !

>go to JA and have fun with amateur radio. they have millions of
>people there.

Thanks anyway, but too crowded, too expensive, too cold in the winter time, none of the street signs are in English, they don't use American money, they don't have VHF repeaters, they don't have autopatches, the VHF band is only half as big as it is here, they have only 10 kcs on the 75 meter phone band, they have to pay for a license every year, and I can hear millions of people in Japan when I turn my radio on anyway, so no need to go - every time I listen to fifteen meters I think I am already there. Plus we have millions of Japanese people in Guam every year anyway, so I can see them here at Kmart.

Besides, amateur radio in Japan is no fun at all. If it was, then half the active Japanese HF operators wouldn't have U.S. vanity callsigns and be running all over the world to other places to play with the radio. Try busting a pileup on HF with 10 watts and then tell me how much fun it was. If ham radio in Japan is fun, one JA ham would not have flown to the U.S. to stand in line and get a vanity call sign from KH7, and he wouldn't have 10 or 11

club callsigns issued to him from the U.S. If ham radio in Japan was fun, over half of the KH2 extra class calls wouldn't be issued to Japanese hams, most of whom have never been to Guam. If ham radio in Japan was fun, over half the KH0 extra class calls wouldn't be issued to Japanese hams, most of whom have never been to Saipan. If ham radio in Japan was fun, there would not be a bunch of W5YI VE teams in Tokyo giving U.S. exams.

Every Japanese ham that I have ever met who enjoys ham radio just can't wait until the next time they can get out of Japan to enjoy it.

Every time there is a major contest on HF, a group of hams from Japan drags 2000 pounds of antennas and equipment to Guam or Saipan for the contest. Japanese hams always come to my house to play with the radio, so I think it's safe to assume that ham radio in Japan is no fun at all, probably even less fun than W6 land.......

So how's ham radio in Canada, Masa, is it fun there too ? Do they have lots of VHF repeaters, or do you just talk to cops on your HT ?

Well, I can copy Morse code about 35 or 40 words per minute..... I can say
Mushi Mushi when I answer the phone, my dog responds to hand signals,
I can say 'good morning', 'good evening', and 'good afternoon' in Tagalog,
I can say 'thank you' in Russian, and I can ask where the bathroom is in
Japanese.

But I flunked Flench in high school, so I guess with two weeks experience,
you're one up on me M@S@.....

I'd also like to take this opportunity to apologize for the gentleman who called
you an 'exchange student'. Nobody in their right mind would ever exchange a
perfectly good Canadian for you........

You couldn't be an exchange student, M@S@. Nobody in their right mind
would exchange a perfectly good Canadian for you.

>you don't know what you are talking about and that's a real problem
>for amateur radio. it turns the people away from amateur radio.

This isn't amateur radio. This is the internet, more specifically, usenet.
Amateur radio is connected to the black wire that goes out the window to
the antenna. This is connected to the telephone. No damn wonder you
can't learn Morse code M@S@, you can't tell the difference between a
radio and a telephone.

Hi. Dozo, Air-e-ga-toe goes zai mush ta, Emo san.

> >>in mountains. Ane help?

Your best buy for an SSB HT available now is a Cherokee AH-100 SSB/AM Handheld. http://www.bills2way.com/equip/ah100.html
It is the most powerful HT for HF-SSB at low cost. 7 Watts. US$220.
It could be used with a small transverter for 160meters.

I don't know of any 160m commercially available transverters, but a small portable transverter is much simpler to homebrew than a complete SSB handheld. There was a homebrew article for a 160m transverter in the 1974 (or 1975?) ARRL Handbook I think... :-)

The efficiency of an HT antenna is very low on 160m. It is unlikely you will get out very well with low power without a longer external portable type antenna.

THAT, coupled with the fact that you can't pass the test..... And please don't bother to bore us with the story of Squiggy's Big Adventure In Mexico On HF again , or tell us the tale about how you passed the CW tests years ago but were just too darn busy to take the written back then. I simpathize with your cause, Squiggy. What a burden to bear, what a load to carry - thousands before you have done it, but you just can't cut the mustard. Classic inferiority complex.

But then again, if anybody's good at carrying a load, you're it.

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel.
Made in Chicago. Excellent running top-end three speed tube unit
from late 1950's or early 60's with extra features. Has separate
optional Webcor compact mini-suitcase speakers that fold into
little suitcase. Handles 7 inch reels. Has top-end options for
its time. Weighs about 38 lbs by itself. No mikes, missing
small piece of cover plate on bottom about 2"x 3" for access
(Just screw in any plate to cover if you wish), have SAMS
photofacts manual for unit. $100 plus UPS Shipping. Will pack
it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military
tube tester as well -- or guitar or bass amp.

Sounds like the infamous VCO5 problem, where the sealing
compound inside the VCO5 shield conducts with age. There
is a KEnwood service bulletin out for this. Basically,
the fix involves cleaning out the old sealing
compound, replacing a couple of diodes and transistors,
and resealing the VCO with hot melt glue.

You know passing a test, whether it is in school, or for a job (civil service) or something like the ham test really only prove that they can study and pass a test. Not if they can use that knowledge. I work for and with engineers, many of them have passed their PE test but if you ask them to design, build and operate what they design they couldn't do it. Very few of the people passing professional test can do what they are testing on. Ask a structural engineer to demonstrate the ability to weld two I-Beam together. Or ask an automotive engineer to pull and service a transmission. They passed the test for their fields but they can't do it because their training didn't require them to learn more than what the professor was going to have on the final examination.

>
>I, for instance, would like to see the examination process privatized
>and run similar to the SAT testing system. No exact pre-published question
>pools, just study guides (with sample questions/answers) similar to SATs.

I also may have missed something when I was studying for my test. I didn't think that the question pool I was studying from were the exact questions on to be on the test, but a sample of what would be on the test. As it was I passed both test with good scores in the 90% range. That's what some of the No-Code bashers forget too. That you have to (or at least I did) pass a 30 question novice test, and a 25 question technician's test. It's been five

years since I took the test, and since I haven't had an urge to upgrade, as my no code tech priveledges serve my needs (when my equipment works) I haven't up graded. (Yes I am appliance operator who can do some minor maintenance on his equipment.)

>pro-code camp (myself included) would actively support elimination or
>reduction in the code examination.

Although I am on the fence with the no-code/code licensing, mostly because of the treaties that the U.S. has signed. (regardless of what you feel about international treaties, they exist so as to be far to most of the world. Sure every once in a while the US gets screwed, but how many times have we as a country forced our believes down others throats in the form of international treaties? These treaties that we signed are the same as some of the local ordinances that keep anarchy from running rampent in the streets!) I do agree that the test could be a little more in depth. I wouldn't want to see any essay questions as they are too open for interpetation. But more multiple quess questions on the theory yes, with the possibility of demonstrating how to build a simple transmitter, or a reciever. (this might be pushing it). But I also think the rules and regulations governing Ham radio need as much weight as the theory. With out understanding the rules all the theory in the world won't help keep the ham bands self policing.

Good point! I own an HT that I use only in emergencies, and during storm season. If I am required to go out and buy an HF rig that I really don't have time to use to make it cost effecient, it wont happen. Besides another point that seems to be lost among the pro coders and no coders many of us live in buildings, or communities that prevent us from either erecting an HF antenna due to community ordinances and building codes, or stringing out a random wire antenna due to lease agreements. so what common mode would be required? HF Phone? HF CW? If the intent is to provide other than local regional emergency communications HF is the only way to make it happen.This in its self could kill the hobby.

I agree with you.

Ham radio itself will die anyway... it's too expensive and too old.
It takes too much time before you can use it.
The internet is much faster and efficient. There are more people on
the internet than the ham radio.
The CW requirement is just helping other people to avoid ham radio and
use the internet instead.

it will not be crowded because not many people are interested in ham
radio nowadays. + it isn't so cheap to get on the HF... radio +
antenna + tuner +.....

I have a HF rig here, but I don't use it.
You go ahead and use the frequency. Less and less people are on the
air nowadays. Even 2m and 70cm repeaters are under-used.

> Don't you know if "WE"
>(ARRL) let em in they might do somethin to upset all them old farts at ARRL.

ARRL will become upset because they can't sell CW products such as
code practising tapes and such. Of course they support CW
requirement. Someone explained about this a couple days ago...

Your analogy might have some merit if horseback riding had something to do
with driving a car. It doesn't. On the other hand, CW is the second most
popular mode in use on HF today. That alone makes it relevant.

When horseback riding becomes the second most popular form of personal
transportation, come back and try again.

I have forsale a PRO 2004. No scratches, holes, dents. Comes in the box with the manual and antenna and original packing.

350.00 firm.

This will be going to the frostfest on Jan 18th. I will pay shipping. Has been 800mhz modded. Need money for a tower.

Well, you need more than just a couple mobile radios, but let me take a shot
at it.

Five parts required: Radio One, Radio Two, Controller, Antenna, Duplexer.

Coordinate the frequencies you are going to use with whomever the
frequency coordinators are for your area. Different places, different groups.
See ARRL for details on a group near you. Understand the two meter band
plan. Some frequencies are not for repeaters, they are for other things, like
satellites and weak signal work. Don't put repeaters on uncoordinated
frequencies, it causes lots of hate and discontent. Once that is done.......

Radio one is the receiver. Hook it the the controller.
(Receive audio)
The controller contains the phone patch. Hook it to the phone line.
Radio two is the transmitter. Hook it to the controller.
(TX audio, PTT)
Hook the duplexer to radio one, radio two, and the antenna.

When radio one hears something, the controller keys radio two
and repeats it. When the controller hears certain touch tones,
it takes the phone line off hook and dials the phone, and patches
the call to radio two...

The duplexer a) keeps the transmitters signal very narrow and
b) keeps the receiver listening in a very narrow space so that the
transmitter doesn't overload or desense the receiver and thus
kill the incoming signal on radio one. In other words, the duplexer
prevents the two radios from interfering with each other, and
allows them both to use the same antenna.

Adjust the transmitter to an appropriate power level based on how
good the receiver hears (don't want people to hear the repeater if
they can't key it, frustrates the users). Adjust the squelch so it
won't pop open unless it hears a copyable signal. Put the radios on
a frequency where the receiver hears no intermod, or interfearance,
from other signals (which you already have coordinated).

Poof ! You have a repeater.

VHF ham repeaters use a 600khz split. Commercial repeaters use a
5mhz split....

If you are going to do this with two VHF (2 meter radios), plan on
spending 1600 to 2000 dollars for a good duplexer. The two meter
band is not wide enuff to do it without duplexers, unless you put
radio one and radio two a mile apart. To see what happens without
a duplexer, hook radio one to one antenna, and radio two to another
antenna. Listen to a conversation on a local frequency on radio one,
then while you are listening key radio two on another frequency
600khz away from the frequency you are listening on, and note what
happens to the receive signal. You may get away with a cross band
repeater and no duplexer, 146/440 or 146/220 but you won't make
one on two meters without a duplexer.

Hope that helps. I'm not an expert, but I think that covers the basics.
I'm sure somebody will correct me if I am wrong.

Agreed. Blow job. If you want to use CW, go ahead and use it.
We shouldn't ban CW; rather, we want to see CW doesn't block HF access
for excellent electronic technicians who like to communicate by voice
on HF.

Generally the helpful and polite responses are far more common. In any human endeavor there will be those few who are arrogant, rude, very immature, or seriously troubled (drug, alcohol, or personality defects).

I've learned to feel very sorry for the "bad eggs" and to pray that they will heal and mature, while trying to remembering to affirm and emulate the more mature and helpful. (Perhaps that's the nature of a pastor!)

I trust that you will find the overwhelming majority of hams here and elsewhere to a wondeful bunch of folk! I have.

>Pro-No-Code/Slow Code 92 to present

How about this for a filter?

"No-Code General" Must have at least a 2-year degree (AAS) in Electrical / Electronic engineering
"No-Code Advanced" Must have a 4-year degree (BSEE) in Electrical / Electronic Engineering
"No-Code Extra" Master's degree or better in Electrical / Electronic Engineering

That would filter out the people with no dedication to the hobby of radio or the art of electronics, but would also open the door for more perfectly qualified operators to use HF, and still keep the "Lazy CB'er" out of the HF bands. Who's going to spend at least 2 years in school and thousands of dollars just to avoid a CW test? This way, people with proven knowledge, who were interested in Ham Radio, would be rewarded for their efforts and they could upgrade by either learning CW and taking the traditional route or by earning a higher degree. All would still have to pass a written test on Rules & Regulations and operating practice.

To program the Pro-90:

I live in Birmingham, Al as example. There is a little booklet which
came with the radio.
In the book is listed the 2 trunk systems in Jefferson county.

Pick a bank, example bank 0. Now, program all the frequencies of the
trunking system
into this bank. once you have this done, press the "trunk" button. The
display will blank
and the bank digits at the top of the display will blink. Press the
number of the bank you
wish to "trunk scan". Press the "0" button. If there is a "carrier"
present, the scanner will
lock onto it. When it does, press the "srch" button. Now, the scanner
will lock onto the
first signal it comes to. If you want to track a conversation, press
the hold button. You
will notice that the "number" or trunk id has been locked. Now, when
one of the persons
transmitting unkeys, the radio will "follow" the conversation to
whatever frequency they
turn-up on.

If you live in an area which does not use the "default" type of motorola
trunking, you may
have to manually determine the system by trial and error (instructions
in booklet). Fortunately for me, Birmingham uses the default system,
and the scanner works flawlessly.

Let me know if you get your scanner working....it's a really good unit
regardless of the
trunking feature....

```
The number of hams in JA is increasing.
Although no-code basic license allows you to operate on HF spectrum,
many operate on VHF/UHF even on microwave bands.
440 repeaters are used, 1.2 GHz repeaters are used and they are now
setting up 2.4 GHz repeaters. This is a way to keep ham radio
spectrum.

for repeater info, go to:

http://www.jarl.or.jp/Japanese/A_Shiryo/A-1_Repeater/A-1_Repeater.htm

and then click the respective area to continue...(from 0 to 9)

learn something from JA.
here, almost nobody uses UHF higher than 70cm. well... 70cm repeaters
are even under used. 2m repeater are underused here in Montreal
as well.
commercial guys are almost there to take our bands.
keep cw and make ham radio dead. heheeheheeee....

-
Here is a summary of news items covered on edition #249 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 9-Jan:
-
1. Affiliates Report Apparent Failure of Sputnik 40/PS2/RS-17
2. Mir Loses Another Attitude Computer, Packet TNC Still Down
3. Final Acts of WRC-97 Now Available from FCC
4. ARRL Explains New DXCC Fees, Members Express Unhappiness
5. Ohio Club Initiates "E-mail Elmer" Program
6. NASA Receives Award from ARRL for SAREX Cooperation
7. Special Event Station Calendar
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Weekly Propagation Forecast
10. AMSAT Offers Suggestions for Tricking Your Tracker for 1998
11. Microsoft Tests Windows '98 Beta 3, Release Later This Year
12. "The RAIN Dial-up" from Chicago
13. BONUS EDITION - "Ancient Amateur Archives" with W2XOY
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, W0ZOK, of
Horace, North Dakota, where "This Week in Amateur Radio" is heard
via satellite Saturdays at 8:00 PM along the Red River Valley on
the W0ZOK repeater on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
satellite uplink.
-
On the WorldWide Web, program audio can now be found in several
formats (including streaming audio) at http://www.roava.net/twiar
```

through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

Yep, I'd say the same.
BTW to convert from pounds (GBP) into dollars (USD) multiply the GBP
price by about 1.62 at the current rate to get dollars cost.
So you are looking at around $267, plus import taxes and carriage.
Import duty here in the UK is around 5% of the value of the item(s)
plus we get to pay 17.5% of the value to the taxman. Ripper!

Actually, Morse's machine used a pen to make marks on a moving paper strip, driven by a clockwork mechanism. This was intended to be read by eye. The pen was activated by an electromagnet. Pen down and pen up made distinct click-clack sounds defining the element leading and trailing timing edges. Operators soon learned that they could tell what character was being sent by the click-clack sounds made by the pen. Since they had to transcribe the marks to readable plain text anyway, and it was slower to keep looking up at the paper strip and back down at their copy blank, they started just copying by the sound of the pen.

Similarly, Morse's encoding machine used an encoder called a "port rule" which was driven past a switch by a clockwork mechanism. The port rule had notched sections assembled on it corresponding to the characters to be sent. These notches worked the switch. Setting up a message on the port rule was similar to setting type (Morse stole several of his ideas from the printing industry). Setting type by hand is clumsy and time consuming,

so operators started to just manipulate the switch directly by hand. Later, sounders sans pen were designed, and keys intended to be hand operated were designed, and we got the traditional "Morse" telegraph.

But the paper tape idea didn't go away for a hundred years. Thomas Edison revived it in a different form in a device he called the ticker tape machine. He figured most people wouldn't bother to learn Morse so that they could have a telegraph in their homes, but they might accept a device which printed readable text on a paper strip. Unfortunately for Edison, Bell showed his telephone the same year, and it won the home market instead of the ticker tape machine. Tickers were sold to businesses who needed a written record of transactions, however, and the stock ticker remained in use up until computers took over.

Page printing versions of the ticker also came into broad use after WWI, and were called teletype machines. Some of them remained in use even into the computer age as computer input/output devices. An accessory for the teletype did punch and read tape. This allowed multiple copies of a message to be printed, or allowed messages to be relayed from one circuit to another without having to retype the messages.

Early computers often used punched tape as a way of storing and loading their programs. (We didn't always have to toggle front panel switches by hand in order to enter a program, though we usually had to toggle in a bootloader program, which instructed the computer how to read a punched tape, after a cold start.)

Punched cards were also used. These were originally designed to drive Jacard looms (the source of the original Luddite uprising), but were adapted to hold the data for the 1900 Census. IBM gained much of its early market making card punches, card sorters, and card printers for the government, so they carried the punched card idea over as an input device for their computers. Believe it or not, there are still card punches and readers in use today in some of the more backward IBM shops. Industry even used them as inventory control tags until the bar code replaced them.

Back to Morse sounders. I originally learned Morse on a sounder. My teacher was a retired railroad telegrapher. What I didn't realize (and neither did he), was that radio didn't use Morse Code, and that it used variable length tones and spaces instead of clicks and clacks. (Neither of us had a SW radio at the time.) It came as quite a shock when I first heard the International Code on a radio. It didn't sound anything like Morse Code on a sounder, and of course several of the character codes were different too.

Today we call what I learned American Morse. The Code used on the radio is a derivative of the code used by telegraphers in Europe and was called variously the Continental Code or the International Code.

I had to start over from scratch learning the proper code, and with tones instead of click-clacks. It was tough. Copying a sounder is much easier than copying tones. The click-clacks are the timing edges which define the code elements. You have to recover those timing edges from tones by mentally envelope detecting them in order to demodulate the tones back into the modulating waveform generated by the sender's key.

That's hard to do in your head. It takes lots and lots of Pavlovian conditioning to do it. Our brains don't come wired from the factory to be envelope detectors. But our brains are good at picking a tone out of noise, and that's important on the radio, so we struggle to become envelope detectors of tones.

Early arc transmitter operators learned a better way. The brain comes wired from the factory with the ability to discriminate pitch. Those arc transmitters couldn't be keyed on and off rapidly, but they could be FSKed by switching a reactance in and out. So the operators did that, and copied the FSK signals by ear. That was closer to the click-clack of the landline sounder in that the timing edges were sharply defined, and the direction of shift told key down and key up. Some RTTY operators can still copy a bit by ear (I can copy my call sign and several common words and phrases at 60 WPM), though at today's speeds that's rare, and not worth the bother since the machine does it so much better.

Yep, the phone system stayed up, and apparently so did the civil
and military authorities' mobile communications setups, so they
didn't need hams on VHF or UHF. They didn't need HF CW either,
of course, but I guess the hams wanted to play. Probably called
each other on the phone to get together on a frequency to use too.

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

One of the mistakes too many people make is to think that by changing what is offered things will change. Too often, the problem lies elsewhere.

Canada had a no-code license starting back in 1978 (I think I've got the exact year). It was the digital license, intended to bring computer types into the hobby to make use of radio for networking. It was no code, required passing what I've heard was quite a difficult exam (though I never saw the questions to evaluate it myself), and allowed for operation above 144MHz.

From what I've neard, it was never a popular license. In fact, very little was heard about it, and I doubt very many actually entered the hobby that way.

Move on to 1990. Canada did quite a major restructuring of licensing for hams. It changed things so one could enter the hobby without knowing the code, and without having to pass too difficult a test. It added the use of some HF voice with a minimum code requirement. It also made building transmitters something you couldn't do until you'd passed an advanced test.

Both the 1978 and the 1990 changes were meant to bring more people to the hobby. The first try did not work, the second from what I gather did, at least so some extent.

But before these changes were made, one would hear "if only this was changed...", as if reducing standards was what the hobby needed.

But in the 27 years that I've known about amateur radio, it's visibility has never increased.. Changing the entry requirements does nothing if no effort is made to convey that new information to the public.

So we have a much simpler entry point in Canada today, but some think it's still not simple enough. I'm not sure at what point things become simple enough.

The problem lies elsewhere, as it has always rested elsewhere. Once you deal with getting the word out, only then can you decide whether or not something needs changing in the license structure. This is not something unique to amateur radio; it's something I've seen many times elsewhere. When our "freenet" here in Montreal died in 1996 after only four months in operation, management claimed that people weren't interested. But the project was so invisible that not enough people knew about it to make that kind of judgement. None of the people I told about it knew that it was online.

When the new license structure went into effect in 1990, there were no articles in the paper about it. Not as some cold extract from Parliament Hill, and not as some feature about amateur radio and it's easier entry. When there are code and theory classes, they rarely if ever get listed in the newspapers here along with the basket weaving courses. When there are hamfests, they don't get listed along with the church rummage sales. Groups complain that they can't get articles or listings, but the local newsgroups aren't being used for announcements of code and theory classes and hamfests, or even the existence of ham clubs. Sure, those announcements won't reach a lot of people, but considering how little effort it takes, it is shocking that these things aren't being used. It's the local newsgroups that will reach new people, not the amateur radio newsgroups where people have to actually know about the hobby in the first place. But I don't see the Montreal ham clubs, and many of them are already on the internet, even using the rec.radio.amateur.* newsgroups.

And when amateur radio does get mentioned in public (ie away from the closed societies of the newsgroups and the clubs and amateur radio itself) too often the message is from the standpoint of someone who already knows about amateur radio. If you look at it from the standpoint of not knowing anything about the hobby, you get a different picture. Things that aren't important to the beginner get thrown in, and things that are obvious to hams don't get mentioned.

There was a hamfest here at the end of October. From past years, I thought there would be one, but I had to dig to get the details. It was not mentioned in the newspapers, even as a listing in the rummage sale section. A day or two before the event, I found a web page belonging to the club. I emailed them, suggesting that they post a message in the local forsale newsgroup. Whether I was the cause of it I don't know, but a message did appear. But as I read it, I realized that the message was aimed at hams, not at people who don't know anything about it. It would have been a great time to make a brief introduction to amateur radio, to get more people to the hamfest and learn more about it.

Amateur radio, in both Canada and the US is easier than ever to get into. In both countries, that great wall, the code, is no longer a requirement to getting started. I'm not sure there is a need for more people to join the hobby. I know that once things started on that path, the need for more people became a necessity, because by changing it from a technical hobby the need to justify the ham spectrum became dependent on lots of people using that spectrum. But there are a lot of things not being done that would bring people to the hobby, instead of resting on the hope that no code and simpler tests will make things better.

why not use digital
>signal instead ??

Many hams, occasionally myself as well, use their computers to send perfectly timed code from their keyboard. Such machine-generated code can be copied by computer with reasonable reliability at up to around 50 WPM, and I suspect that this speed could be increased with a GOOD soundboard program. providing state-of-the-art digital signal processing. I often practice sending to my own computer using a straight key or bug. Such practice helps tighten up sloppy timing and clean up excessive "swing" in hand-sent code. As a consequence, my code can be copied by computerunder good conditions with about 85 percent correct copy with a straight key.

I used to copy the CW WX broadcasts from coast stations with the computer and HAMCOMM. WLO sends good clean code at 31 WPM, ideal for computer copy. I would get better than 90 percent on screen, enough to be a good backup to ear copy. If I didn't get it, the machine probably did.

Unfortunately, Coherent CW probably would not be a big factor in attracting new hams to CW, fascinating as it is. The big reasons for still using CW are useability of old antique or simple homebrew gear, narrow bandwidth and QRM resistance, convenience of having only to listen in order to copy, non-relieance on computers, and plain old nostalgia. Computer-aided CW does not really address anything but the narrow bandwidth concern, and bandwidth increases with speed

Where CW, computers, and new hams make the most dynamic impact on one another is in the learning process. I used primarily WD5CID's SUPERMORSE to get from o to Extra in just a couple of months. I also listened torecordings (home-made and used only a couple of times) on micro-cassette, W1AW practice broadcasts and bulletins, and both ham and commercial CW traffic, but without the program

it would have taken me at least 6 months to get up to Extra speed, and maybe as long as a year. Most Morse Tutor programs offer variable tone frequency, element speed, character speed, and overall word speed. Many formats are supported such as text file input, random groups, random length groups, plain text of normal words, and a letter at a time.

Supermorse by WD5CID ver 4.16 allows dial-up QSOs by modem, though I have never
tried it. It could be done, though, in a sort of chat room where each user is
assigned a slightly different audio frequency. A keyboard key could be used as
a straight key. It would be a real neat trick to design such a system, and
probably most people with the requisite skills to tackle such a project just
don't care.

I suppose one could use a radio, though......

If the above is a typical example of the level of literacy among Canada's university students, then I fear our Neighbors to the North are headed for hard times. Masa, obviously, is a person without credibility as far as his opinions re: the Morse code requirement in the ARS is concerned; and, instead of concerning himself with this issue, should be working on attaining basic literacy skills instead. He can live without Amateur Radio; he cannot live without the means to make a living.

?

> How are we going to communicate with other Hams if we
>can't even understand a "common language".

use the internet. make a phone call. it's better isn't it ??

> If those that are codeless
>think everyone in the world "speaks" english they are truly deaf!

if someone doesn't speak English, how do you communicate CW (in
English language) ? if you want to someone in japan who doesn't
know any English, you can only communicate in q-codes and some other
codes and that's it. Q-codes don't do much unfortunately. too
bad.

> If
>you want to "speak" around the world, PAY THE PRICE!

I don't have to pay the price. I use the internet. It's cheap and
it's efficient. I talk (text & voice) to the people all over the
world without a single license... from germany, france and japan.

>>ssb isnt much faster when you have to use
>>phonetics.

typing is much faster than CW for most of the people isn't it ??
also, the typing will remain on your hard HDD etc.,

>> There are probly thousand of other reasons to learn it that
>>arent mentioned here.

the reasons why CW must be learned:

1. keep obscelete mode that most people don't want to or care about.

2. to "avoid" the people out there who want to join the ham community
by requiring them CW skill... suggesting them to join internet where
they can communicate freely without being tested.

And anyone who believes that Morse is akin to the "universal
translator" of Star Trek fiction is either naive, brainwashed
by the Morse Myths, or just plain stupid.

Morse is simply an encoding of an alphabet into a series of
beeps (and a damned poor and inefficient encoding at that ...
see Gary's recent rehash of how simple FSK would have significant
performance advantages over OOK Morse).

Morse simply allows one to "spell" words ... it does NOT overcome
language barriers and the amount of information that can be conveyed
through the use of "Q-signals" and other abbreviations is severely
limited ... mostly to typical mindless "cookie-cutter" DX and contest
exchanges ... you know ... "rrr ur 599 in Dogpatch, ur name agn pse?"

The theory is necessary because ham radio is *supposed* to be a
technically-oriented service. We are allowed to build, adjust, repair,
etc. and are not required to use type-accepted equipment.

I admit that today's tests don't do a very good job of assuring even a
modest degree of technical competence, but that's a different problem
that all the Morse tests in the world won't solve and needs to be
addressed separately. It does NOT justify the continuation of Morse
tests for access to HF ...

> what's the purpose of this ??
>
> efficiency ?????
>

Purpose...an interesting concept when you discuss CW. I espouse CW not because I think it will be the way to save my soul in some dire emergency when no other form of communication will get through. Actually, I believe that so few people know Morse these days that I would be better off saving my energy than trying to tap something out on pipes.

My interest and desire to pursue CW via the Internet stems from my belief that my creativity and thinking ability can be stimulated by communicating in Morse Code, because it engages a different brain process than reading or speaking does. The more of my brain I can engage the more power I have at hand to solve problems. Oddly enough, I also enjoy code. I never played guitar or any other musical instrument, so copying CW always made me feel like I could do something that not just anybody could do.

Now it gets really interesting, because while most hams want a no code license, I want a no theory license, because I don't have any particular interest in tinkering with radios, stringing antennas up outside my home, etc. etc. I want to send and receive CW, that's it.

Many people have replied to my request for information on "virtual CW" with the response "but who would you talk to?"... I have friends who also like CW, and I also believe that there are others like me who would enjoy the mental challenge and stimulation that CW provides. If we build it they will come.

I hope that this answers some of the questions that people have about why I want to establish a means of communicating in Morse via the Internet, in real time. However, while I have found a plethora of information on how to have the computer turn Morse into type, I have yet to find out how to interface my Bencher paddle to my Compaq, and set up a site where CW fans could chat. If anyone has any ideas please pass them on.

Meanwhile, I will leave the arguments over code vs. no code to the rest of you.

301. FS: $30 b/o Simpson 360 Digital VOM

SIMPSON 360 DIGITAL VOLT-OHM-MILLIAMMETER. Bought it and found I could not test it, because it uses a three prong unique sized Simpson extension cord that appears to be no longer available from Simpson (I tried to buy it). It has a battery compartment for battery powered field use, but one of the metal contacts need replacing so I could not test it that way. The point is I don't wish to put any money into it if I can't buy a power cord for it. I wanted it for bench use. I would guess that it does not run, but maybe it does? Probably good for someone who wants a back up parts unit for their Simpson 360. It's a shame, because the thing is a super unit in nice physical condition. Do not have leads or manual. $30 or best offer.

Plus UPS Shipping costs which are not much. I'll pack it free and bring it directly to UPS to get you the lowest shipping rate.

I live in the city, but your acrage is most impressive.
My suggestion would be to use the roof of the metal barn simply as a support for the antenna. I don't know how much distance is between each of the buildings, but, run the wire from each of the various buildings, on the lot. using them as connection points for each corner of the square antenna. In other words, take advantage of the full size of the acrage (not spelled right).

Political correctness at its finest.

If I'm involved in any international venture, you can damn well bet I
want *ALL* cooerespondence to be crystal-clear, no room for misunderstandings.
Anything less creates room for future problems. To suggest that it is
somehow "acceptable" to have poor interpersonal communication skills, even
with multiple cultures, is utterly laughable. This is exactly why businesses
hire talented bilingual employees or pay major dollars for an outside
translation company -- to avoid potential misunderstandings due to language
barriers.

If someone is going to take the time to post to a predominently english-
written USENET newsgroup, then they had better take the time to make a
concerted effort to make their postings coherent. MASA's postings fall
short in this regard. As a result, his thoughts are muddled and it is
difficult to take anything he posts seriously, even if he has the best
of intentions in posting.

> going on here?

Actually FCC Part 97.503(a) reads, "A telegraphy examination must be
sufficient to prove that the examinee has the ability to send correctly by
hand and to receive correctly by ear texts in the international Morse code
at not less than the prescribed speed, using all the letters of the
alphabet, numerals 0-9, period, comma, question mark, slant mark and
prosigns ar, bt and sk."

And Part 97.509(d) goes on to say, "Passing a telegraphy receiving
examination is adequate proof of an examinee's ability to both send and
receive telegraphy."

There is no provision for substituting a sending test for a receiving test.
So, if someone passes a code examination simply by sending CW with no
receiving test involved, the examiners are in violation of the testing
procedures.

CB Bimbo wrote: "ARRL is the self-proclaimed voice of amateur radio
and represents itself to the FCC as such," and continues, "Where's
that fat ol' CB Bimbo?"

You've got that a bit skewed, Bimbo. Since 1914 the government has
known that it can reach a considerable number of US hams by going
through the ARRL.

It was the League that united the nation's hams; prior to the ARRL,
the various ham clubs across the country were isolated and worked
independently of each other.

It was the League that set up the *very* first coast-to-coast radio
relay network (remember, there were no commercial radio broadcasts
at this time - only the continental telephone system existed). This
proved to the government just how valuable the League was for national
communications. As a result, the government awarded the League the
use of 425m for this national trunk-line system. (Remember, hams
were banned to wavelengths below 200m in 1912).

Another very important example: When the US was forced to join the
WWI hostilities, the Navy desperately needed hundreds of radio operators
immediately. The Navy turned to the ARRL and asked for help; the ARRL
put out the call, and within 10 days 2500 hams volunteered as military
ops. Next, the Navy found itself dangerouly short of radio equipment,
and asked the ARRL to help supply ham gear from the better stations
belonging to the League trunk-lines. (At that time, many hams ran
superior gear than that of the Navy and commercial stations.) The
equipment was immediately donated. League officers left the ARRL
to become military radio instructors: Clarence Tuska, League secretary,
was place in charge of the Army Air Corps radio training; Edwin
Armstrong was placed in charge of the Signal Corps' Radio Lab
at Paris, France.

There are hundreds more examples I could provide, Bimbo, of why
the government believes the ARRL and amateur radio are synonymous.
Of course, you're too blinded by some hostility or ignorance to see the
larger picture.

You can either buy a new RAM board from ICOM (at what I recall is a
reasonable price) or send your radio to them for a new battery and
reprogramming.

I believe the RAM programming must be done by the factory.

Good luck.

I highly doubt it Rambo, I was listening to nets on 75 which were for purposes of discussion no different from the nets you hear today, music, dirty jokes, jamming, name calling and the like. That was in 1973/74 as an SWL, 25 years ago. In 25 years not much has changed, They (the particular nets on 75) have not destroyed the hobby yet, do you really think a VERY small portion of operators is going to pull the hobby down? I mean how many stump jumpers and liberty netters are there anyway 200? tops?
Give us a break from it all. Will you be happy if the hobby falls apart? Will it make you feel good to point your finger and say I told you so? Now the real question is, what have YOU done to benefit the hobby?

You tell us you ceased your amateur operations due to the attitude of many hams, were you so weak that you let a few bad apples spoil the hobby for you? Could you not find any other operators that shared your same interests. I cant believe someone would put in the effort it takes to get licensed and then a few jerks take it all away from you because they said something you didnt agree with. Pretty weak Rambo, pretty weak.

==========

No,
I don't believe there are any reasonable facts for keeping the Morse code requirement and it's not an effective LID "filter". From where I look many of those who would like Morse code knowledge free access to HF bands, are those who don't want to do the means necessary to achieve the end. I have heard much of Carl's arguments before, during the establishment of the currant Tech class license. We heard that the Tech class license will attract those echo are interested in learning and many of our unused bands will see more activity and thus protecting them from commercial interest. Ladies and gentleman, it didn't happen. I can't fault the newly licensed Tech's. They received damn little encouragement from the established Amateur community and much worse nothing from the ARRL.

Would you care to show data indicating that "large numbers" of
experimenters kepy away from ham radio by CW versus the numbers of those
actively and fully involved in ham radio *AND* experimenting?

I think you are attempting to tilt the playing field in the direction
of your personal biases. There are many engineer/experimenters who hold
Extra class licenses-fully code tested- and disagree completely with
your assesment. Most won't challenge you here since anyone doing so has
been instantly branded as "bACKward" or "Luddite".

Persons who have the mental capacity to attain that level of learning
rarely if ever have any *real* problem in learning something as mundane
as Morse Code.

It's largely an attitude problem, of course, the "I just don't want to
do anything that I don't think I should have to do" syndrome. I feel
sure there are many engineer/experimenters who are embarassed by this
no-coder theme.

> Some will argue that the "large number of experimenters" have freely
> choosen to avoid ham radio as a hobby. IMO, ham radio needs experimenters
> more than the experimenters need ham radio. IMO, the lack of such
> individuals within the ham radio ranks is the major problem facing the
> ARS as we enter the 21st century.

Where is *ANY* evidence there is any lack of such individuals in ham
radio, or any evidence there has ever been any such lack? Because you
know a couple of sharp individuals that reject ham radio -or full
participation as code licensed hams- doesn't set out the future for the
entire hobby/service.

If that's the extent of the problems faced by ham radio, we are in
great shape. All those "experimenters" are free to join in any time.

>required!" Amateur radio was not billed as a technical
service back then,
>e.g. "Learn remote command and control, telemetry,
and other kinds of cool
>stuff!" (appealing to those computer geniuses
we were supposed to get.)

Hey, if someone passes the test, obtains a license, and purchases a radio, they
have the right (within legal parameters, of course) to use that radio any way
they see fit. Again, if it were not for these new, codeless techs "keeping in
touch with their family and friends", I guarantee there would be far fewer
frequencies allocated to "amateur use" today.

The
>codeless license was sold to amateur radio as being a means by which
all
>these technical geniuses were going to get involved in ham radio, but
who
>were turned away because the code test was "outdated" or required too
much of

>minor requirement from the licensing
structure.

As it should be for an entry-level license.

>Yet, what I see today and
>hear on the radio today are a large number
of people with little interest in
>the aspects of radio (whether technical
or in the art of communication) and
>more in the "personal communication"
aspect. Ham radio is a cheap cell phone.

Again, if the operator goes through the hoops and makes the investment, they have a legal right to use their privileges for any legally-permitted purpose.

Several years ago I was an officer for the largest radio club in Rhode
>Island,
with 350 members. This club sponsored a repeater, which had
>coverage
in 75% of the state. On the repeater was an autopatch. Guarenteed,
>at least
once a month, when a new member would join, s/he would use the
>autopatch
an average of 10 times per day. And, you couldn't talk to these
>people.
Try to tell them that the autopatch was there for nominal or
>emergency
use, and isn't supposed to be a replacement for a cell or pay
>phone,
invariably we would get the welfare state mentality reply: "HEY! I
>PAID
MY $20! IT'S MY RIGHT TO USE THE AUTOPATCH HOWEVER I WANT!"

Just how is this "welfare mentality" when the operator in question PAID for the privilege of accessing the autopatch?

>I just
>don't think there are many newcomers
>with enough interest in amateur radio
>that want to be helped.

Depends on what your idea of "helping" them is. If it includes criticizing
their operating procedure, trying to shove Morse code down their throats, or
telling them that they're not "real hams" because they haven't submitted to the
Morse hazing ritual, then yes, I can see where they would not want to be
"helped."

More often than not they are hostile when you
>attempt to offer constructive
criticism or advise. One time I was chatting on
>146.55 simplex with a
roundtable, and I kept hearing someone talking, as if
>they were a few KCs
off, like on 146.54. No amount of searching could find
>them. At one point
I thought perhaps they were close to me in a mobile and I
>was getting some
front-end overload, until someone else in the roundtable
>eventually heard
them too. Finally, we found the party talking on the 146.70
>repeater (with
a 146.10 input). I could hear his signal from 145.8 to 146.6.
>When I
called him on the radio (and later the phone) to tell him he might
>have a
problem with his radio, I was told "F OFF, A-HOLE".

Unfortunate, but surely the exception, rather than the rule. Is it possible
that maybe...just maybe...you may have used some sort of derogatory manner
which caused you to receive a response like this?

>Take an HF
>radio to a HAM club meeting and see how long it takes
>to give it away....
>

I'm running into this problem right now. As President of Rhode
>Island's
second-oldest amateur radio club (est. 1926), we maintain a
>fully
operational club station at a clubhouse the club owns outright.
>Yet,
nobody ever uses it. One or two people might operate on a Friday
>nite
when we're down there, but that's it. Other than our "70th
>anniversity"
special event station last year, where we made over 1000
>contacts, the
station has been relatively unused. I've personally, out of my
>own pocket,
donated a new pentium computer system and a drake L4B to upgrade
>the
station. We've installed a new ICOM HF/6 meter (IC730, I think is

>the
right number), purchased by the club. New antennas, new coax,
>totally
remodeled station courtesy of our "station manager" and.... no
>use.

Maybe they don't like the company. If you harp on the newcomers to your club
the same way you talk down to no-coders on this newsgroup, I can certainly
understand why they might feel this way.

>I'm sure a lot of new hams or people who are thinking about ham
>radio
>are confused by what they read here. People who are hams who
>come
>here looking for something interesting or constructive about ham radio
>
>don't usually stay here for long.

When you really get down to it, though,
>Jim, what is interesting about
amateur radio anymore? The technology is old,
>and newer technology is
outside the engineering capabilities of 99% of
>today's hams. What is
left to talk about? I visit our clubhouse for our
>weekly friday evening
meetings, and we end up talking about our jobs, other
>events in our
lives -- rarely anything "radio" related.

So, maybe it's time to come full-circle. Admit that amateur radio has served a
useful purpose in the history of communications in this country, but also be
brave enough to admit that it's approach, it's means, and it's methods are now
very primitive, as measured by today's cutting-edge modes of communication.
After all, why should someone spend hours, learning how to tap out mechanical
noises on a brass key...and then spend hundreds of thousands of dollars on
receivers, transmitters, tri-banders, towers, antenna tuners, etc., in order to
communicate around the world? Today, anyone with $500 (or less) in their
pocket, a phone line, and $19.95/month (or less) can purchase a used Pentium
computer and accomplish the same thing, regardless of band conditions,
atmospherics, man-made interference, or signal jammers. Maybe it's time to pay
our final respects to "the old girl" and lie her to rest, gracefully, before
the government and the commerical interests do it for us. Think about it.

Peter Maus <petermaus@aol.com> wrote:

>What is coming out of all this debate, is that the code requirement for access
>to the ham bands is a roadblock to the 'elite'.

Hello Peter,

You've pretty much hit the nail on the head. All one has to do is go back
and review the postings of the No-Code Agenda poster-boy, Carl Stevenson.
Stevenson has posted, on numerous occasions, how he refuses to take the
13wpm code test because he is better than that. He has told us how he
has forgotten more RF theory than that contained in the pooled knowledge
of all the universe's amateur operators. He speaks of hundreds of
engineers he personally knows who refuse to get tech licenses because they
refuse to be "2nd class citizens".

What we basically see from Stevenson's postings is that he, and his
"engineering buddies", are a bunch of prima-donnas who are used to being
treated like royality. Now, here comes ham radio, with that pesky little
code test. "WELL! <harmph!> How DARE they test me in such a MENIAL mode!
I'm A GENIUS!" they all think to themselves. So, the code test is now
"outdated" (even though code remains the second most popular mode in use
on HF today) and "obsolete" (right next to SSB, which is a few years
younger, I guess), and how every ham who is not experimenting in some
new gee-whiz digital mode is a "luddite".

Stevenson and his prima-donnas fail to recognize that there are two
parts to amateur radio. There is the technical aspect, which is very
important. However, it is less important today than 20 years ago.
Electronic circuits, with custom manufacturered, non-documented ICs,
are more difficult to design and engineer these days than the typical
tube rig the average ham built for his shack 30 years ago. Equally,
perhaps even more important, is the art of communication.

Let's look at things another way: which is more likely to be remembered
by people: 1) that a ham created new technology which ultimately was
engineered into your cell phone, or 2) that hams were able to assist
in your local disaster communications during the last hurricane?

Technical knowledge is important, for competence. In-depth technical
knowledge at the engineering level is no longer required in amateur radio.
Instead, ability to communicate effectively is the important skill.
Remember: image is everything. When all people see are the "public service"
aspects of our hobby, its those elements we have to impress them with.
They're not going to know (or care) that some IC in their cell phone was

engineered by a ham operator.

Recent numbers posted here showed point data for one month only. One set of observations does not equal a trend. On the contrary, we see the number of licensed amateurs increased overall by over 30k in 1997. All license classes showed growth.

Source record: 182556
Cross-posted to: uk.radio.amateur,alt.radio.uk,rec.radio.amateur.misc

I have developed a software package for the design/assessment of
point - to - point radio links for the frequency range of 30MHz to 60GHz.

The software calculates system and path losses and by changing antennae
feeders etc, a reliable radio link can be designed.

A terrain profile can also be produced from OS DTM map data or entering by
hand distances and heights.

Results can be printed out.

Please visit my site http://www.users.globalnet.co.uk/~wysock for further
details.

I've maintained this for some time: that ham radio in the 1990s
is primarily a not-very-technical personal communication service.
It's nice to hear a pro-code person agree.

Sure frogs don't remember when they had the tails!
CW was there first and CW is allowed anywhere on Ham bands not the other way around. I can live with no-coders in peace as a die hard CW op. but why from time to time this kind of stupid provocative comment appears here and there?
I never bother with anyone who does not like code. Just leave me alone and let me enjoy one aspect of our hobby of many.
If you have nothing else to do other than making this kind of comment, go try to learn code(for a change which will never happen, hi) or do/ learn something useful for your life/career. If still nothing else, go to sleep or eat something and keep the mouth shut.

From: Kevin Alfred Strom <kevin.strom@innocent.com>
Message-ID: <34B04BD1.4294@innocent.com>
Source record: 182563

Certain TS440's, before a certain serial number, have a problem with the potting compound covering the VCO components becoming conductive and corrosive with age. This partially shorts out the circuitry, and generally causes the PLL to unlock and go crazy.

If this is your problem, it will only get worse.

It happened to my 440 about three years ago.

I delicately scraped the potting compound off of my circuit board and resoldered every connection, but honestly it is not a solution I can recommend to others -- too many possibilities for disaster.

Jim, KA3LPC, is a Kenwood expert and repair technician who first told me about this common problem and he is experienced in resolving it. I advise looking him up at the QRZ or Buckmaster database and dropping him a line.

Good luck in fixing your 440.

With all good wishes,

Kevin, WB4AIO.

Nothing fishy at all. The way the rules read, you must demonstrate
proficiency in either sending or receiving morse code at the designated
speed. The rules also make allowances for potential amateurs with
hearing impairment, in that they allow a flashing light or any other method
within reason to be used.

Funny thing, you know,
I was assigned to a COMSTA and do not recall the first Morse code signal on authorized military freq. Too difficult to encrypt.
I would be interested in what theater this took place.

As for RFI, the modern mil equipment is more than adequate to filter out unwanted RFI given "proper operator technique". The only true weakness outside of intentional jamming is EMF from a nuclear above ground blast which did not occur. Then, tube type would not (most likely) be affected and would be the vehicle of choice for comms.

341. HamNet Forum now available on WWW as part of "C from CompuServe"

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-04 00:00:00 UTC
From: Scott Loftesness <sjl@compuserve.com>
Message-ID: <#qoXRrYG9GA.120@nih2naab.prod2.compuserve.com>
Source record: 182567

The HamNet Forum on CompuServe is now available to anyone who has Internet access and either Netscape or IE 3.0 or higher. In the past, you had to have a CompuServe account in order to get into Forums. Now, as part of a project called "C from CompuServe," there are over 500 Forums accessible from the World Wide Web, including HamNet

HamNet is one of the oldest communities of amateur radio, shortwave listeners and scanner enthusiasts in cyberspace. Begun in 1981, HamNet was one of the first "forums", or online discussion groups, on CompuServe's original "MicroNet" service. Today, HamNet has 23 message sections and file libraries, covering all aspects of amateur radio and related electronic hobbyists interests.

There are three levels of participation available with the new "C from CompuServe" service. Guest Membership provides read-only access to the HamNet message board, and is free.

Limited Membership is also free, but allows you to enter some of the CompuServe transactional areas and databases. You download a "Virtual Key" plug-in for your browser that allows CompuServe to recognize you. In addition, Limited members can pick one Forum for full participation at no charge. In other words, if the only thing on CompuServe you're interested in is the HamNet Forum, Limited Membership means you can fully participate in HamNet, but only HamNet, for free.

Finally, Full Membership allows complete participation in all 500 Forums, for a monthly fee in the future of under $10. However, during the introductory period now underway, Full Membership is also available free of charge with a 30 day notice being provided to you prior to the monthly fee being imposed.

To check out the HamNet Forum, point your browser at this url:

http://www.csi.com/go_c.asp?PIN=HamNet

It'll try to recognize you and then deny access unless you have Virtual Key (IE4.0 for the Mac comes with it), and take you to a signup screen. You can either select "Free Preview" for read-only access, or download the plug-in and sign up for membership. Full membership is now being offered with the free trial mentioned earlier

By the way, if you're already a CompuServe member, "C from CompuServe" is included in your CompuServe membership at no additional charge. All you need to do is download the Virtual Key software, configure it with your userid/password, and you'll be ready to take full advantage of "C".

Please send me an email if you have problems with it, or there's something I can help you with.

SB DX @ WW $OPDX.338
Ohio/Penn DX Bulletin No. 338

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 338
BID: $OPDX.338
January 5, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA1GJ, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, NT5C, K8XP, N0TG, 9M2TO, F6AJA, G3XTT, G4BUE & DX News Sheet, HB9CYN, JA0DAI, JE7RJZ, LU1DZ, OH6KXL, ON1DDT, PA0ALB, RA3AUU, SM0DJZ and YO3FWC for the following DX information.

9M2, PENANG ISLAND (6 meters from W. Malaysia). There are currently two 6 meters stations active there. Tex, 9M2TO, is currently running 150w into a 4 element yagi and Phoa, 9M2KT, is running 100w into a GP antenna. There were no times or frequencies provided, but watch for openings. QSL 9M2TO via JA0DMV JARL Bureau. QSL 9M2KT via 9M2 Bureau.

9M8, EAST MALAYSIA. Peter, PA0ALB, reports there will be activity from Serian, Borneo Island (IOTA OC-088), April 10th to May 22nd. The callsign to be used is 9M8CC. His equipment will be a TS-440, PS-52, AT-230 Antenne tuner, 2 elements triband Fritzel for 10/15/20 meters and a GP for 80 meters. Check 1200z on 20 meters. QSL via PA0ALB.

9M0C, SPRATLY ISLAND DXPEDITION UPDATE. Don, G3XTT (DXpedition Publicity Officer), reports in a press release that arrangements for their forthcoming 9M0C expedition to the Spratly Islands are going well. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin. Meanwhile, nine cases have been shipped by sea on November 30th, from Southampton for Kota Kinabalu in Sabah Malaysia. They will arrive in Kota Kinabalu in early January. All the Yaesu equipment has now been shipped from Japan. This will also arrive in Kota Kinabalu in early January where it will be combined with the shipment from the UK. The combined shipment will then be sent to Pulau Layang Layang before the DXpedition team's arrival. The main team that now includes all the UK contingent plans to arrive on Pulau Layang Layang on Tuesday, February 10th. This is two days earlier that originally planned, but this gives them three full days to set up the very extensive antenna farm and the five stations. The second group arrives on Friday, February

13th. They will then be fully operational for at least nine full days including two complete week-ends. For more details and updates, please take time to check their Web pages at: http://members.aol.com/spratly98

ATTENTION CONTESTERS! Ciprian, YO3FWC, reports that the 1997 YO DX Contest Official Results can be seen in on the WEB page: http://members.tripod.com/~ciprian/yodx.htm

CT98, PORTUGAL. Look for Portuguese amateurs to use special prefixes from January 1st to September 30th during their "Expo 98". Stations who usually sign CT1, CT2 and CT5 may be using the CT98 prefix. CT4 stations may be using the CS98 prefix, CT3 stations may be using the CQ98 prefix and CU stations may be using the CU98 prefix. QSL via their regular CT/CU callsigns.

D6, COMOROS. Martin, HB9CYN, and Chris, HB9CYV, will be active as D68YN and D68YV, respectively, from January 25th to February 6th. Activity will be on all bands 80-10 meters (maybe 160m) with operations mainly on CW but with some SSB, and maybe RTTY. After the DXpedition, stations worked can find their contacts on the following Web-Page:
http://ab5eh-lin.tamucc.edu/~hb9cyn
Also QSL-requests may be sent to the addresses mentioned on the WWW-site above.

FT5W/FT5X/FT5Z, CROZET, KERGUELEN, AMSTERDAM ISLANDS. OPDX has received a report stating to expect FR5HR on Crozet for 5 days, then Kerguelen for 5 days and then Amsterdam for 10 days starting January 1st and ending January 22nd. Jean Paul, F5BU, leaves Strasbourg on January 14th to Reunion Island, and he will arrive at Crozet Island on January 21st. He will be active as FT5WG until March 18th, with operations mostly on SSB. QSL via F6APU. Also, keep an eye open for Helios, F6IHY, signing FT5XN on Kerguelen. He will be active until June. He is usually active on 20 meters but plans to be active on other bands in the future.

HS, THAILAND. It has been reported that Kareem, HS1RU, runs the HS/9M net on 7060 kHz daily, starting about 1305Z. He is often very readable in the states and has agreed to listen for a "short while" above 7150 kHz for USA when the conditions are good before starting the net. Monitor 7060 kHz around 1305-1310z, and Kareem will specify a listening frequency. It is suggested, as a courtesy to Kareem to please NOT persist in a contact after 1315z. Let Kareem and the others get on with their net. They will be back the next day. It was also mentioned that Kareem will listen for CW on 7060 khz 1305-1310z, and for the eastern USA he works the low end of 40 meters CW quite often around 2200-2400z. QSL via JG3AVS, P.O.Box 86, Amagasaki 660, Japan.

IOTA NEWS.....
Jean Marc, F5SGI, will be active as F5SGI/P from Re Island (EU-032, located in the Poitou-Charente Region Group), from February 15-21st. His activity will be on 40-10 meters, mostly on CW, but on SSB, look for him on 14260 kHz.

Look for OH8TA to be active from Hailuoto (EU-126), February 6-8th. Activity will be on the normal IOTA frequencies. Operations included VHF/UHF and RTTY activities. QSLs prefer via bureau.

KH2, GUAM. "The 59(9) DXReport" states that Walt, KF2XN, will be active until March 15th as KH2/KF2XN from KH2D's QTH while doing disaster relief work.

LU1ZC, DECEPTION ISLAND (South Shetland Group) UPDATE. Alberto, LU1DZ, GACW Coordinator, reports the two operators on the island have installed the following antennas: 10/15/20 meters 4 element tribander 30 meters high (fixed to Europe); 30/17/12 meters separated delta loops; 45 meters long wire for all bands; 160 meters half wave dipole, and they will be putting up a 2 element 40 meters monobander in future. They are currently active on 6 meters on 50110 kHz USB, and very soon they will be ready to operate on the satelite. Also, start looking for them on the SSB IOTA frequencies.

ON50, BELGIUM. During 1998, the Union of the Belgium Radio Amateur (UBA) will celebrate their 50th year anniversary. Look for UBA club stations throughout the year to use the prefix ON50 followed by a 3 letters suffix. A special award is available by working stations and collecting points. Checkout the UBA WEB site for more details at:
http://www.uba.be/algemeen/awarden.htm
Meanwhile, the Zelzaatse Radio Association (ZLZ) reports that they will be active from January 1st to December 31st using the callsign ON50ZLZ. They will be active on HF, VHF and during the UBA Contest. They also mentioned that a QSO with ON50ZLZ is good for 6 points for their ZLZ Award. QSL via ON7ZT or by P.O. Box 53 B-9060 Zelzate Belgium.

QSL INFO AND NEWS......
Harry, RA3AUU, would like to inform everyone that the QSL bureau of Soyuz Radiolybitelej Rossii (the Union of Radioamateurs of Russia) is an IARU affiliated society and the ONLY OFFICIAL address for the QSL bureau in Russia is: P.O. Box 59, Moscow 105122 Russia. He also reported to OPDX that Vasily, RW6HS, who was mentioned in last week's bulletin (OPDX.337) as the UA6 Bureau Manager, is no longer the manager for the UA6-bureau.

ZK1XXP North Cook QSLs. Tom, K8XP, states that the Dateline DX Association wants to advise those waiting for QSLs from its September operation from North Cook (ZK1XXP) that the cards have not yet arrived from the printer. The cards are being provided by FUNKAMATEUR in Germany, and we hope they will be forthcoming in the near future. They ask you to be patient. The many cards already received are safely stored and waiting attention!

Alain, F6BFH, states QSL for XV8FP will be ready early January, and he hopes to send the cards out before the end of January.

QSL MANAGER CHANGE! It was announced that the QSLs for the present operations from Nepal by the Japan UNICEF Ham Club, including Naoki, 9N1JZ (JE7RJZ) will now be handle by JH8XIX.

SPECIAL EVENT STATION 8N0WOG will be opened for Foreign Amateurs in NAGANO Japan!! Every Amateur Radio Operator who comes over to Nagano can operate the special event station, 8N0WOG, during the NAGANO 1998 Olympic Winter Games. All you need is your station license or the official certificate in the English language issued by one's MPT. Japan currently has reciprocal licensing agreement with only 8 countries now (i.e. USA, Germany, Canada, Australia, France, Korea, Finland, Ireland). This limitation will be taken away by Japanese MPT during the Olympic Winter Games. What a great chance to operate! Nagano city is located about 200km northwest of Tokyo, and it can easily be reached by Super express train from Tokyo Station. The location of the 8N0WOG station is located at the Warm-Hearty Welfare Center, just east side of Nagano City Office. The station will be opened 16 days from February 7th to February 22th. The station will be active on all HF bands from 160-10m including WARC bands, CW/SSB, 500 Watts max., and 144/435MHz FM/SSB. For more information and inquiry:
Fax to JARL Nagano Office: +81-26-233-2356
E-mail to JA0TBJ, Kimi Koyanagi: ja0tbj@mx2.nisiq.net
Check out the JARL Web site: http://www.jarl.or.jp

TR, GABON. Roland, F8EN, will once again sign TR8CR from February 5th for 5 weeks (at least). He will be active mostly on CW. QSL via F6AJA.

VP5, TURKS AND CAICOS ISLANDS. Look for N0TG/VP5, WA4DAN/VP5, AA4VK/VP5 to be operational January 16-23rd. Activity will be on all bands 160-6 meters. QSL all to: N0TG, William Rowe Jr., 1094 Big Rock Loop, Los Alamos, NM 87544.

VR6, PITCAIRN ISLAND. The "DX News Sheet" reports that VR6MG is active on 20 and 40 meters CW. No specific times or frequencies were given. OPDX did some research and found that VR6MG was reported on 14210 kHz at 0116z and 7001 kHz at 1325z.

XW30/XW30A, LAOS DXPEDITION UPDATE. The suggested frequencies for the upcomung XW30A (SSB/RTTY/FM) and XW30 (CW) DXpedition, which will take place January 5-14th, have been announced. Look for them on the usual 20/15/10 meter DX frequencies (025 and .95). Suggested frequencies for 80 and 40 will be around 7007 and 3507 kHz for CW; 3797 and 7047 kHz for SSB (depending on QRM). RTTY activity will be around 14083 kHz listening up 3-5 kHz, and occasionaly they will try 21083 kHz. On 160 meters, they will try to concentrate on 1823 kHz (and for JA - QSX 1910). On the WARC bands: CW - 18075 and 24895; SSB - 18145 and 24945; and on 30 meters they will be around 10103-10108 kHz, but as the QRM level rises (at least in Europe during the dark hours), they will try to find clear spots up around 10115 kHz. As a genral rule, they will always try to work split listening up or even down with announced listening frequency. All QSLs will be handled by SM0AGD, Erik Sjolund, Vestag.27, SE-19556 Marsta, Sweden.

There IS NO uglier American anywhere than you, Your Codelessness, and I've never even seen your picture. Beauty is skin deep, but Ugly goes all the way to the bone. Someone might be overweight and he can diet, but for you there's no help. Ugly is as ugly does, to paraphrase Forrest Gump.

Typical Carlspeak....Stevensonslime.....If it's a code advocate involved he can't ever be right about anything. No matter that the kid's lack of intelligibility is NO standard at all. Why should it matter if no one can make any intelligence of his postings? Make him feel good--pat him on the back, don't "force" him to learn the English language just to post on an English language newsgroup! That's just like making Carl learn CW to get on HF! Blasphemy!!!

... come to think of it, that's exactly how they treat
> any ham who's code speed is not "up to their standards of excellence,"

The code is pretty easy to over come and has not stopped anyone I know from advancing beyond No-Code Tech. Most of the No-Code Techs around here have upgraded to Advanced and Extra Class within a year and a half.

It has never been easier to get into the hobby. The Tech has full privleges above 30Mhz even without code. That is more phone privs than I started with my Novice.

It only takes a little practice. When I first started trying to learn code, I thought I would never get it, but in less than 30 hours of listening I passed the Novice 5WPM, and in 2 weeks took my Tech and passed. I was content for about another 2 years when the bug for more HF phone privilages bit me. I picked up an ARRL 18-22 wpm tape and the Gordon West 13WPM tapes. I listened to them in the car while driving to and from work. With in 30 days I was copying 18wpm solid and took the General 13wpm and passed. Again I am content, but lately I am getting the urge to just upgrade to Extra to just master it and open a few small windows of spectrum.

It's easy, all it takes is the desire to do it. There are around three quarters of a million HAMs in the US. The hobby is no dieing. Our club gives free classes at the local college. We meet one night a week for 12 weeks. I went through the same class back in 1991 with about 35 others. At the end of the 12 weeks we had 35 people who could copy solid at 5wpm and a few at 13 wpm and all had a good understanding of radio. We did not memorize the answers but learned the material.

It is not that hard, just take the time to learn the material and not expect to get everything handed to you in life.

If you don't want to do it, don't. The government provides some great frequencies for those who don't want to learn the material, 11 meters, and there is cellular phones, comercial radio...There is even CB chat, video chat and such on the internet, so there are plenty of modes of communications for those who don't want to learn HAM radio stuff.

HAM radio is here for anybody who wants to learn. It is not to difficult for anybody who wants it. The hobby is not dieing, in fact I hear new HAMs everyday and we are running out of call signs.

If people would expend the energy they use complaining about the code and just sit for a few minutes a day while driving to work or set aside a few minutes in the evening to listen to a tape instead of watching the boob tube, they would find they could pass the code in a few weeks.

Can you tell the difference between a Dit and a Dah, well if so you already know 2 letters..... E T

Can you tell the difference between Di dit and Dah Dah well you are up to 4 letters I M

And there are ways to help you learn more complicated letter like di dah di dit listen to the rythem, sounds a little like "the hell with it" "the L with it" yep, its an L

Well your up to 5 letters already!

Only 21 letters to go 10 numbers and a few others and you are set.

If you really think the code is there to keep people from becoming HAMs, then why don't they move the speed up to lets say 60 wpm? That should really clear the airwaves. No they don't do this, because they do want people who can use morse code in an emergency when "nothing else can get through". Sure it is a small bit of effort to master, if they did not reward us by giving us more spectrum, they realize few would bother with it. CW will get through when nothing else does. As slow and outdated as it may seem, it does get through when nothing else does. It does not take any fancy equipment, it is the bare basics in radio.

It is not there to be a barrier, it is there as part of the art of HAM radio, to be one of the skills a HAM can call upon when needed. It is one of the skills the HAMs learn in becoming part of the Amateur Radio Service. Learn it, be proud when you have mastered it, even if you think you will never use it, the day may come when you will be glad you know it. You wanna advance your

ticket, then learn the skills of the level you are going for. There are no barriers, just goals. You make your own reality. It is all how you look at it.

If it is truely just the code keeping you from 75 phone, I hope to hear you up there in only 30 days, because it will only take 5 to 10 minutes of practice a day for about one month to achieve 13 wpm.

Pick up the Gorden West 13 wpm tapes and the ARRL 18-22 WPM tapes, between the two you will get it. It is really not that hard.

Stop complaining and DO IT!
Hope to hear you got your Extra soon. ;)

Hi Dick, I work for a company that has tens of thousands of employees and actively supports amateur radio stations at their different sites. There are 1/3 as many hams at my company as there were ARRL survey respondents. We offer in-company Morse code classes in hopes of getting novices, techs, and tech+'s to upgrade so they can become part of the iEARS HF emergency communications effort. Many of the no/slow-code hams are HW/SW design engineers with degrees ranging up to PhD. The technical exams would be a breeze for them. Of the ones unwilling to upgrade to general, every single one of the more than one hundred no/slow-code hams cited the 13wpm Morse code test as their single reason for not upgrading.

> I think you are attempting to tilt the playing field in the direction
> of your personal biases.

"Personal experiences" would be a more accurate description. And actually, the playing field is tilted now. What I would like to see is a leveling of that playing field so that imminently qualified potential HF hams are not barred from participation by obsolete regulations. How about we keep personalities out of the argument? Nothing is accomplished by resorting to personal accusations. The existance of any of us as personalities has absolutely nothing to do with the issue.

> There are many engineer/experimenters who hold
> Extra class licenses-fully code tested- and disagree completely with
> your assesment.

There are a lot of those types of hams where I work. My company is a microcosm of ham radio in general although slanted toward the technical side. Nobody gets mad at anybody else because of the code testing issue. All are free to post their opinions here if they wish.

> Persons who have the mental capacity to attain that level of learning
> rarely if ever have any *real* problem in learning something as mundane
> as Morse Code.

That's just the problem. They don't want to learn something that even you admit is "mundane" and a perceived waste of time for many of them.

> It's largely an attitude problem, of course, the "I just don't want to
> do anything that I don't think I should have to do" syndrome.

Most of the guys responding to my company's internal survey say,
"I just don't want to waste my precious time learning something useless
to me."

> I feel sure there are many engineer/experimenters who are embarassed
> by this no-coder theme.

There isn't any "no-coder theme". There is a "no-code-test theme" and
there's no reason for anyone to be embarassed about it. We are simply
exercising our Constitutional rights to get some obsolete requirements
removed. IMO, if amateur radio is going to continue to exist and thrive,
the code testing requirement must (and will) be removed.

I'm a pro-coder, use it weekly, and teach Morse code classes. But I
also want ham radio to survive into future generations.

> LIKE YOU, DICK.

Hey I like your stats, Carl---"far more"-- now that's a number that
you can really get your teeth in and use for comparison.

Yeh, I'm the jerk that started and ran a VE team when there was none
closer than 100 miles, and welcomed no-code techs when that program
started. I still take phone calls from many of them, and go help when
they need it. I'm the jerk who tested a sightless fellow who had been
flunked twice by another team because he couldn't run his braillewriter
fast enough, and when we gave the code test verbally, he made 100%...I'm
the jerk that has always held the philosophy that ham tests should not
be any more difficult than really necessary and that anyone who truly
wanted a ham license should be able have the opportunity to get one. You
could ask any of several hundred people I dealt with as a VE over 8
years, they'll tell you what kind of a jerk I am.

Because I believe that ham radio must include morse code testing, you
have labelled me a mortal enemy to all of ham radio. Because you won't
- or 'can't'- learn it.

I'm perfectly willing to let the readers decide for themselves. Have
you ever given of your free time and effort to see that ANYONE else was
offered the opportunity for license testing?

The onus is on you, fellow.
I've got nothing to prove.
You've got a lot of hot air.

Squiggy? Har de har har!

>HOW WOULD LIKE TO GET A LETTER FROM THE FCC SAYING YOUR 20WPM CODE TEST YOU
>TOOK A YEAR AGO WAS NO GOOD I DID.....

I'd love it. I'd even love it more if the FCC raised the extra class CW test to 40 wpm, general to 35 wpm, and novice to 30 wpm.

Sometimes I go to the VE tests and take the CW test just for fun !!

I think everybody should have to go back and take the CW over at least once a year. Or even once a month. Or even once a week. Just think how much money W5YI and the ARRL could make if we all had to go take the test over every Saturday morning ! I sure hope Fred doesn't read this message !

Anyway, sounds like you are hanging around with the wrong VE guys.....

Hello all,

I hope this is not get too religious but...

I was considering getting equipment, upgrading my tech license, but I never got into packet, never bought any equipment. When I got my license in 1994 [kc5gef] I was excited. I had followed in the 80's and earlier the debate over a no-code license etc. I thought then I could marry computers with ham radio. Well that is a yes/no. All my life I thought that ham radio was the 'leading edge' if not the bleeding edge of the beginnings of technology.

With the beginnings of the WWW as well as the growing popularity of the Inet, ham radio has been left in the dust still arguing about whether cw should be dropped or not.

All the technology that is used in radio right now is surpassed with internet/computer technology. All of which is without a need for testing for a license or heavy fed regulation.

ragchewing/chatting in real time -- no license, no feds
chatting with audio/video -- no license, no feds
bit/broadcasting with audio -- no license, no feds [see http://www.dice.net/radio/]
dxing -- no problem with the internet
emergencies broadcasting -- could be done but is MUCH easier with radio.
technical aspects -- computer/networking technology is every bit as stimulating and complicated as radio and more so.

making friends -- I have had friends on the inet since I first got on in 1992, from all over the world and 1 from india and 1 from nepal has visited my home. There online communities exactly like the ham communities. They keep scheds, channels etc.

costs are much less. Gouging by computer mfgs is far less common than radio mfgs.

I could go on. The fact is sad while the ham community squabbled they missed their chance to marry the two technologies. It was a natural marriage too.

I would appreciate if anyone could tell me what ham radio has to offer that computer/internet doesn't offer.

Thanks for taking the time to read this.

terry

I am looking for a program that will allow the user to generate Morse code using the computer's sound card, such as a Sound Blaster 16. Does anyone know of such a program that is shareware or freeware? I suppose that I might also be interested in any such commercial software, if there is nothing elsewhere. I need to make some code tapes for a ham friend. Thanks.

This person has no idea of what Morse Code really is. It is a sound made
by long dashes and short dits. The only sound you can make by taping on
something is the short dits. This limits your letters to E, I, S, H, and
the number 5. You are correct in saving your energy for other endeavors...

Additional examples of subject areas deleted for brevity.

The good thing about Tim's question is that it provides,
once again, the opportunity to point out that a potential
ham CAN, in fact, ignore several theory subject areas and
still pass the test....BUT can not ingore the CW test because
it is a separate and individual test element. I have said
on many occasions that if the pro-code test advocates were
acceptable to integrating the scoring of the theory with the CW test
then I'd have no problem retaing CE as just one more subject
area.

Message-ID: <34AF1854.1175@wcic.org>
Source record: 182604

Hello in need help with this delima. I got the ARRL antenna handbook 17th edition and on page 5-18 there is a 7-MHz verticle wire loop antenna. I live on a farm so there is alot of buildings. The one that I think would be best is the tallest barn with a tin multi slope roof. The first slope is about 20 degrees from verticle and the second is about 45 degrees, the other half of the barn is the same. If i built four of them two of them would give a high angle propagation and the other two a low angle propagation but what effect would the tin roof have on the antennas, would puting the antenna on standoffs help? Could I phase them all together to make one kick glutius maximus. The antenna if it worked would transmit east and west. I could do the same thing on another barn for the north and south. If you have any ideas please reply

Thanks in advance for the input

Ed,

You MUST program your trunknng freq's when in "trunking" mode! That is,
first press the "trunk" button and keep it pressed for about 2 seconds
(until you hear two beeps) THEN choose a bank, then program in all the
frequencies. If you enter the frequencies in regular mode, the radio will
not track the system!

Cheers,

Jim

Yes Sir, unfortunately there are those out there who think that their precious hobby is going to go all to *!@$#^%& if the "unsavory CB element" of amateur radio gets theur way. Maybe this is so, but would it really get any worse (witness the manifold reports of those who listen regularly on 80 Meters) than it already is??? Besides, where is the incentive to use other (high speed) digital modes from 30 MhZ down? The bandwidth of those modes is very much wider than old fashioned Morse Code and would create more problems (especially with overcrowding). The plain fact is that just as the spark gap xmitters went, so will the OOM (on-off Morse) eventually go, every government agency in these united states (and Canada) has abandoned the Morse Code and Amateur radio should (and eventually will) follow, strange thing that, we (amateurs) used to be the leaders !!!!!
Good day sir and 73's

Hi Steve -

I'm using a highly modified Tripmate (external power, NMEA
conversion and external antenna). I've built the guts of
the Tripmate and an MIM module (the heart of the mic-e encoder)
along with a 7805 regulator power supply into a project box, not
much larger than the original Tripmate housing. This and an MFJ
dedicated APRS packet radio and 2m whip are all I need. Running
it on a 19" mag mount whip, 5 watts on the top shelf of my closet
it hits local RELAY and/or WIDE digipeaters and is seen by other
APRS hams along the front range of the Rocky Mountains here in
Colorado. No APRS software is required for this "mobile tracker"
setup. In my QTH APRS I use WinAPRS, Pico Packet TNC, Kenwood
2m mobile, IBM Thinkpad.

Check the Colorado APRS site listed below for APRS links. Email
me for any other, more specific questions. And if you're ever
anywhere on the eastern slope of the Rocky's, join us on the
APRS 2m voice net. Sunday evenings, 1900 hrs local time on the
CRA repeater system, 147.225.

Well to begin with -

TN state troopers do not have authority or jurisdiction to
enforce these federal laws you think you have heard of,
although there may certainly be state or local laws, which
they do have the authority to enforce.

Second of all, I highly doubt that you would be arrested
'on the spot'. At the worst, it is a misdemeanor (a criminal
offense) or in some cases the lower classification of 'violation'
(a traffic, not criminal offense) or lower still a local ordinance
violation. All of which are arrestable situations, just as jay
walking or running a red light is. But it is very rare that any cop
would arrest you for any of these minor charges.

Perhaps the simplest answer to the whole thing is
DON'T SPEED. Scanner or otherwise.

Proudly Retired Deputy Sheriff, Lumpy

Lumpy writes:

M@S@, I think WE don't know what YOU are talking about and that's
a problem, or at least a continuing source of amazement to
a lot of people on these NG's. I, for one, admire your ability to
speak at least some foreign language(s) other than your own native
tongue. I'll bet you speak English and French better than most
Americans speak Japanese.

But at times I really feel sorry for you. You're like the poor
dumb kid that everyone else makes fun of but never realizes
that he himself is the brunt of all the jokes.

Come on. You want to be a financial genius, then learn the ropes,
get a degree. Master the languages. You could go a long ways
speaking three languages and having a degree. You could be
the next Mr Bill.

You want to speak your opinion on code vs no code? That's fine
too. But If you're going to argue with people in English, do
a little research and proof reading. Just as you have done
regarding the Japanese code issue.

I know I have sent you several personal emails on different
subjects. None of them have ever been answered. That suggests
you enjoy the notoriety of posting on the NG. But if you really
believe in what you say, learn what you're talking about and
answer your email. And practice that English language.

Good luck in your studies.

385. FM 828 UHF Info ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-04 00:00:00 UTC
From: gilly@camtech.net.au
Message-ID: <34b86867.13425561@news.camtech.net.au>
Source record: 182623

Hello to all on the newsgroups.

I have an Phillips 828 UHF W2 (500 - 520 Mhz version) and I am thinking of using the amp section as the final amp in a 432 Mhz transverter .

The Transverters output is approx 100mw.

According the specs in the handbook the only changes required to the TX PA are 5 capacitors to bring the amp back down to a "T" model (420 - 440 Mhz)

The final would also need to have some form of bias setup for use on SSB.

I am interested if anyone has "played" around with this idea and can tell me if it was successful or not and could provide me with any hints.

Thanks in anticipation.

Alan gilly@camtech.net.au

Source record: 182624

>The number of hams in JA is increasing.

Numbers can be deceiving at times. In speaking of the Operators License in Japan, it is issued for life and therefore no one can really tell how many hams there really are. The number of Station Licenses are a better indication. The station licenses are far lower than the operator licenses. The number of hams is increasing in both the U.S. and Canada., also.

>many operate on VHF/UHF even on microwave bands.
>440 repeaters are used, 1.2 GHz repeaters are used and they are now
>setting up 2.4 GHz repeaters.

In the large metro areas of the U.S., this is true also. Japan is a much smaller country with a more densly packed population. In the U.S. and Canada, the population is more spread out and therefore, why should hams say in central Wyoming set up a microwave repeater when they can get along just as well with two meters...

I really don't feel that flooding the ham bands with warm bodies (just for a 'bean count') is the way to go. I fully suspect, after CW is dropped as a licensing requirement (which I suspect will happen about 2015 to 2025) the next crusade will be 'why do I need to know anything about electronics and RF theory? No one needs to know that to operate a radio.' Next, it will be; 'make the written exam easier to allow more people into amateur radio, the written test is too hard'.

>License Suggestion: http://www.radiotelephone.net/no-code/
>
>

BTW, Masa, you never have answered the question as to how to contact the 'personnels' you sent your licensing suggestion to. You mentioned in your initial post on the subject that those 'personnels' wanted to hear from everyone, but no one knows how to contact them. No names or addresses to make comments to.

Bryce, K1GAX (ex AL7DL)

387. One thing I have to be thankful for

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-04 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34af0222.25890949@news.sprynet.com>
Source record: 182625

There is one thing I have to be thankful for, in this code/nocode debate. I find that many, probably most, amateurs who enter the hobby via the nocode licences, eventually, in terms of months not years, do get the cw endorsement.

I suspect they get the nocode licence 'first' to take the pressure off having to pass so many tests to become an amateur. Once they are on the air, above 30 mhz, the pressure is off and they relax and start learning the code. Also, when they get the full brund of the activity style on vhf/uhf, many decide to, at least, give learning cw a try.

Many say that cw has outlived it's usefullness, you have to use cw for serveral months and develope second sence to using it before you can appreciate it's value. Unfortunately, no amount of explainations can demonstrate the usefullness of the morse code. You have to be able to use it like another language before it's use becomes apparent.

The one thing I am rather bothered by is that so many people are giving the beginners the impression that it is bad before they get the chance to learn it and use it and discover it's value for themselves.

In terms of wanting to get on hf to use ssb, I would rush too fast. Though voice is much easier than cw, voice isn't all that it is advertised to be.

There are a lot of amateurs who discover, like I did, that voice is not their cup of tea. It is nice to have cw to fall back on.

I agree with you on the 10 year, but I disagree that the liberty net is jaming.
The liberty net will only jam somenoe that comes up with something they disagree, as they have no tolerence for disagreements, every one has to agree or else.
It is the andiliberty people who go to a freequency ocupied by a sertain group with their ideas, and try to push them out of the band.
While the liberty net members can't stand any one who is not a republican, the other side can't realize that "you must know your oponent" therefore you do not silence your oponent.
This is a political probem that spilled over to Amateure radio by politicaly deprived people.

Right, Bill ... MD and Jim Kehler's comments to/WRT "Masa's" English
proficiency are simply another example of "Ugly Americanism" at work.
They are the types who give US hams a bad reputation as rude and
arrogant.

I guess they believe that the way to "foster international goodwill"
is by being arrogant assholes and insulting people from different
cultures because their English is not "up to their standards of
excellence" ... come to think of it, that's exactly how they treat
any ham who's code speed is not "up to their standards of excellence,"
too ...

How would he know? He never gets on the air and actually USES ham
radio, just spouts drivel on usenet about it, like most other no-coders.

I think you're naive as hell.

The ARRL BOD does what it damned well pleases ... after all,
they are all "high-class" (long-time, coded) hams who "know
what's best for everyone else (NOT).

The ARRL is Nero fiddling merrily while Rome (ham radio) burns.

Their policies are aimed at maintaining the status quo, keeping
Morse as THE measure of the worth of a ham and perverting what was
chartered as a *technically-oriented* service into an electronic
gameland where appliance-operating know-littles can play mindless
electronic paintball wars competitive games to "earn" silly
certificates to hang on their walls to make them feel "important."

The ARRL is ham radio's worst enemy.

Your observations are very astute, Larry. There has been only fleeting reference to "I wanna experiment with new digital modes" but when pinned down by questioning about "why don't you go ahead and come up with some concrete proposals that any ham can work with" they always change the subject. More No-Code Agenda at work.

What they *REALLY* want is easy access to the HF voice bands, and that fact alone drives the entire no-code movement. Believe it, it's a fact cast in stone. The only thing that Morse code has to do with it is that it's a hurdle which they find to be too much trouble to leap, so they are intent on destroying it.

The number of station licenses is increasing... unfortunately...
especially among young people (it's very common among high school
kids).

> The
>station licenses are far lower than the operator licenses.

> The number of hams
>is increasing in both the U.S. and Canada., also.

really ??
I thought the number of silent keys outweigh the number of new hams
(upgrading the license = not a new ham). AMEN.

>>many operate on VHF/UHF even on microwave bands.
>>440 repeaters are used, 1.2 GHz repeaters are used and they are now
>>setting up 2.4 GHz repeaters.

>In the large metro areas of the U.S., this is true also.

please let me know any 1.2 or 2.4 GHz repeaters in US.
I am sure others are also interested.

>I really don't feel that flooding the ham bands with warm bodies (just for a
>'bean count') is the way to go.

flooding the bands is the way to keep the spectrum.
If HFs are packed, many will move to higher bands.
That's what's happening in JA.

> I fully suspect, after CW is dropped as a
>licensing requirement (which I suspect will happen about 2015 to 2025) the next

CW was dropped ~10 years ago in Canada.
It still, however, exists for HF access which doesn't make any senses
in a logical manner.

>crusade will be
> 'why do I need to know anything about electronics and RF
>theory? No one needs to know that to operate a radio.'
> Next, it will be;
>'make the written exam easier to allow more people into amateur radio, the
>written test is too hard'.

make the exam more practical like commercial exams in canada.
commercial exams for restricted licenses in canada are based on
practical (how to make a call, proceed etc.).
introduce phonetics instead of electronic devices. introduce how to
make a call (called station then calling station etc.) .
practical stuffs are very easy but very important.

Many university graduates go to jail by doing some criminals don't
they (they make efforts in their lives) ??

Just wanted to let you know... knowing something or be able to do
something doesn't determine who you are. This applies to CW also.
Passing the CW tests will not give any indications whether one is a
good ham or bad ham.

This morning, my next door (I live in university residence) was having
a pot and cocaine party... 10s of students were there... and they are
the ones who are studying in Canada's well known university, McGill.
They graduate and they seek to work. Now... if the employers see
the McGill name, the chance of one getting hired is very good...
because many assume McGill graduates are well educated and responsible

people -- Not true. This is very similar to CW discussion. CW
will not create "good" hams. There are people out there with
Technician license (on 2m ?) who are much polite and responsible. If
you think CW is a filter and CW is the thing that determines who you
are, you are dead end.

I couldn't put everything in organized statement... but I was trying
to say: CW is not and will not be the indication of who you are.

Hello dear OM and thanks to read my message.

I bought the Headphone with Micro HS51 from Icom recently. The
microphone jack is as follow :

Jack 2.5 mm

------------------- ------------ -------
------------------- ------------ -------
Ground 5 Volts Mic

Apparently this Icom Headset needs a 5 Volts DCC from the Icom walky
talky and my question is :

Have you ever tried to connect this headphone on another brand of
walky talky having no 5 volts in the ext plug ?

Many thanks for your help !

> There is, however, lots of references to the voice used on 80 and 20.
>
> Is this true?
>
> Larry ve3fxq

No, Larry ... many of us have, as our *primary* interest, experimenting with new digital modulation techniques, coding schemes (for error correction, not encryption), protocols, etc. to permit faster data transfers with lower power, less interference, and more robust performance in the face of the sometimes wildly varying propagation characteristics encountered at HF. (Note that this work *cannot* be done at VHF/UHF because the propagation environment and impairments are so dramatically different. Note, also, that in a purely digital transmission environment, "bits R bits," and can convey Morse code, voice, weather data, text messages, video, computer files, or whatever.)

In the future (if the pro-coders don't succeed in killing ham radio before it arrives at the future ... it's currently mired WELL in the past), there will be virtually no need for mode-based sub-band restrictions ... because no matter what type of communications you're conducting (perhaps several different ones at the same time with the same radio ...) the underlying modulation, coding, protocols, etc. will be essentially the same.

We have, however, proposed the establishment of modest (say 25 kHz) MORSE ONLY segments at the bottom of each HF band (where NO such preserve now exists ... remember, the ONLY "MORSE ONLY" segments specified by Part 97 are tiny slivers at the bottom of 6m and 2m). The purpose of these segments is to provide assurances to the Morse enthusiasts that we are not trying to ban the use of the mode (Morse use would continue to be permitted on ALL amateur frequencies) and to provide a "preserve" where Morse enthusiasts could beep to their heart's content without having to compete with ANY of the more modern modes.

Of course, this sort of progress and growth will take folks who understand and want to learn more about how radio works, rather than simply appliance-operating button pushers who judge everyone on the basis of how fast they can beep. The antiquated Morse requirement (and the "We beepers are a better, more worth class of ham than you folks who aren't interested in beeping."

attitude have kept out multitudes of intelligent people who would have made good hams and could have contributed a lot to the ARS.

The rabid pro-coders insist on trying to say "All they want to do is to grab a mike and start screaming 'CW DX' or 'CW contest'" ... While there *are* quite a few no-code-test advocates who are avid CW users and some who participate in DXing and contests (using both CW and/or SSB) I assure you that those are activities that are of little or no interest to many of us.

As far as HF packet or AMTOR, I have operated both extensively (yes, I am a "lowly" tech+ here in the states, but I lived for several years in another country where I had full amateur privileges under the terms of a license from that sovereign country). HF packet sucks ... it was a half-assed abortion from the get-go ... AMTOR is *much* better, but even it has been greatly surpassed by PACTOR, PACTOR II, CLOVER, etc. and there is LOTS of room for improvement.

So, don't let the fact that you don't see a lot of folks saying "I want to use HF packet" etc. mislead you ... many of us would love to be involved in the development of things that are even better than what is available now ... however, the pro-coders want to keep things like they were in the past. They can't stand the idea of ever more advanced technology rendering OOK Morse ever more and more obsolete. They ignore or declare irrelevant the fact that virtually all other radio services abandoned OOK Morse decades ago for better things (the last, the maritime service, will officially abandon OOK Morse in 1999 ... the US Coast Guard stopped even monitoring for Morse transmissions some time ago).

So please don't listen to the distortions and lies posted by desperate pro-code fanatics ... they resort to those distortions and lies because they don't have a *single* rational, logical reason why mandatory Morse testing should be maintained. They have an almost endless list of Morse Myths, arguments relative
to "tradition," and FUD (Fear, Uncertainty, and Doubt) relative to how the "hordes of CBers and outbanders will turn ham radio into a wasteland if the code test requirement is dropped or reduced" ... but NONE of their arguments hold a single drop of truth.

Ham radio desperately needs growth and *redirection towards its chartered purposes* if it is to provide sufficient public benefit to justify its extensive
frequency allocations into the coming century. DXing, contesting, and clinging to the past while the rest of the world leaves us in the technological dust will not "cut it" in this regard. It is, quite literally, a question of "accept
change and modernize or die."

The Morse requirement is an anachronism that serves only to preserve the largely
self-endowed status of an "elite" minority who wish to "rule the playground" like
a small clique of bullies (through dominance based on pure physical prowess) ..

I suspect that most rational people realize that the playground bully is
seldom
the brightest and most capable individual in the general population ...

In fact, most of the more rabid pro-coders here come across A LOT like "Biff"
from the "Back to the Future" flicks ...

actually they have to pass "basic" first in Canada (if they want to
open up a station).

>having to pass so many tests to become an amateur. Once they are on
>the air, above 30 mhz,

and I don't know why this should be above 30 MHz. Why not give them
160m and 10m say ??

> Unfortunately, no amount of explainations can
>demonstrate the usefullness of the morse code.

for some people, morse code is absolutely useless including myself.
For those, I don't know why we must know it for HF access.

> You have to be able to
>use it like another language before it's use becomes apparent.

I rather learn French instead ;-)

>The one thing I am rather bothered by is that so many people are
>giving the beginners the impression that it is bad before they get the
>chance to learn it and use it and discover it's value for themselves.

many people don't have time and don't have to even pay attention to
morse code ;-)

The good thing about Bill's reply is that it provides,
once again, the opportunity to point out the irrelevancy of
Bill's counter-argument. The fact that one can "choose to
ignore" one or more theory sections is irrelevant: 1) you
can choose to ignore the CW examination unless you want to
get on HF; 2) as a general, you can choose to ignore the
advanced theory exam if you are happy with your existing
privileges; 3) even if someone does opt to take a theory
exam and ignores certain components, the applicant is
being discriminated again, because s/he now has to pass
the remainder of the questions on the theory exam at a
statistically higher rate than other applicants, merely
due to the fact that s/he doesn't want to learn anything
about those "outdated" modes (you know which ones: SSB,
RTTY, and so on...)

Yes. The VE can accept either 7/10 correct multiple-choice answers or one
minute of perfect code, send or receive, @ 5WPM. In most cases, however, a
sending test is not required.

Gee, Bill ... tell that to an old land-line telegrapher and they'll ROFLAO.

The sounders of old made a click-clack sound on key-down/key-up ... it
was the duration of the space between the click and the clack that determined
whether a dit or dah was being sent.

Gary Coffman posted a more extensive description of this in the last week or
so ... check DejaNews if you'd like to read more ...

> Meters) than it already is???

Nope ... that entire "line of reasoning" (use of quotes intended to show
sarcasm) is bogus ... it's just intended to generate FUD (Fear, Uncertainty,
and Doubt) in the minds of some in an attempt to prop up the corpse that the
Morse "requirement" is ...

> Besides, where is the incentive to use other (high speed) digital modes
> from 30 MhZ down?

The incentive for the use of modern digital modes is not simply, or even
always, to achieve higher transmission speeds, but rather to permit greater
efficiency of spectral utilization with less interference and to overcome
the propagation impairments common at HF that limit our ability to communicate.
The objective can be to simply communicate more reliably without necessarily
focusing on communicating faster, though higher speeds are certainly possible
as well. An additional benefit would be the ability to communicate with much
less power over a given path, which also would provide many benefits ... modern
modulation and coding techniques can EASILY make a QRP rig outperform a more
conventional rig with a legal limit linear (despite the fact that most hams
are too technically illiterate to realize this fact).

> The bandwidth of those
> modes is very much wider than old fashioned Morse Code and would create
> more problems

Digital modulations do not necessarily have to require/occupy wider bandwidths
than OOK Morse ... in fact, for equivalent character transfer rates, it's EASY
to be NARROWER than Morse and far more robust at the same time.

> (especially with overcrowding).

Overcrowding is a myth ... even on the busiest contest weekends, the ham bands
are grossly underutilized by any reasonable technical standards ... there is
only
the *appearance* of "crowding" because the games are all intent on stomping
each
other into the dust with the brute-force of their "mas macho" signals.

Interestingly, I recently saw a report on a demonstration of a system running 56kbps *net thruput* in the middle of an HF band over a path of several hundred miles ... with at least a dozen carriers in the system's operational bandwidth at 60+ dB greater signal strength ... the demo system didn't miss a heartbeat and
there was NO evidence of any noticeable interference to the other occupants of the spectrum being used. This sort of performance would be within the reach of technically competent hams TODAY ,,, *IF* Part 97 rules did not permit the use of modern techniques and specify absurd "occupied bandwidth" requirements. Today's ham rules have been outdated relative to well-established principles of communications systems engineering and information theory since the late 1940s ..

> The plain fact is that just
> as the spark gap xmitters went, so will the OOM (on-off Morse) eventually
> go, every government agency in these united states (and Canada) has
> abandoned the Morse Code and Amateur radio should (and eventually will)
> follow,

Actually, even the most strident no-code-test advocates such as myself have never suggested that the *use* of Morse should be banned or abandoned ... we have stated repeatedly that there is no good reason for this and that we would not initiate nor support any move to ban the use of Morse in the ham bands. We have even proposed the "set-aside" of modest "Morse preserves" (say the lower 25 kHz of each HF band) as a place where Morse enthusiasts could beep to their heart's content without having to compete with ANY other mode ... note,
however, that Morse would continue to be permitted on ANY amateur frequency, but would have to "compete" on an equal footing with other modes, just as it does
now. With all of their dogma relative to the "superiority" of Morse it is difficult
to understand how the Morse advocates can fear this prospect as much as they quite
obviously do ...

>strange thing that, we (amateurs) used to be the leaders !!!!!

That is true ... but several decades ago the entire "point" of ham radio began to be distorted into a playing field for electronic paintball wars sorts of competitive games, promoted largely by the ARRL, and coupled with an almost total de-emphais on the importance of technical competence, experimentation, etc.

I think it's fairly obvious that the benefactors of this perversion were the ARRL
and the major advertisers (YaesIcoWood, etc.) who support the ARRL's publishing and
lobbying empire through major advertising revenues, with the intent of turning all
of hamdom into button-pushing appliance operators who have no clue how their rice-boxes
actually work and could care less as long as they *do* work so the games may

continue.
(Witness the suggestions of MD that UPS/FedEx shipping questions should be part
of
the ham test to assure that every nitwit appliance operator knows how to return
his
rig to the factory for repair ... gratuitously assuming, of course, the said
nitwit
has the requisite savvy to even realize that there is a problem with said
rice-box.
Noting that not all aberrant operation results in a completely dead rice-box.)

You are right ... hams once *were* leaders in technology ... AND COULD BE
AGAIN, if
we can simply redirect the emphasis of the purpose of the service to what it
was in
the past and has always *supposed to have been*. This is not going to be an
easy task.
The ARRL has been quite successful in promoting the lie that they are
"representative"
of the nearly 700k US hams ... despite the fact that their membership is only
about
175k and many of those "members" (such as me) have long since realized that our
voices
fall on deaf ears and simply continued "membership" to get QST (which has
diminished
in value greatly in the past 2 decades), to "keep an eye on" the shenanigans in

Oldington and Washington that our dues pay for, and to avert the "if you ain't
a
member of the ARRL you don't have the right to bitch about it" whines of the
good
old boy Luddites.

hams
> there really are. The number of Station Licenses are a better indication.

That makes NO sense ... a station could be used by literally dozens of
operators ... in some eastern European countries, operators are only allowd
to operate under a club station license for a year or two before they can
obtain a personal callsign and establish a station of their own ... see a
rather recent QST for info on this ...

> The
> station licenses are far lower than the operator licenses. The number of
hams
> is increasing in both the U.S. and Canada., also.

Recent numbers posted her showed a net decline in the number of HF licensed
hams in the US ... the number of SKs and expired licenses more than offset
the upgrades and new HF licenses. But the (no-code) tech license showed
considerable growth.

[remaining BS relative to future elimination of written tests deleted on the
basis that it's totally bogus]

Source record: 182663
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I have been involved in an annual amateur radio display station, since the late 60's.

A few years ago, at the booth, I was approached by a gentleman who asked this question, 'why should I learn the morse code when, 'all I see, and hear, hams do is talk?'. Before I answered his question, I stopped a second and rethought my approach. I then asked him, 'Do you have a receiver?'. He answered, 'yes, I have a scanner'. I asked him what frequencies it covered. Unfortunately, he was unable to answer the question. From that I assumed that it was the vhf/uhf, type of scanner.

I then concluded that perhaps he had never been exposed to amateur radio cw communications. So.. I politely invited him over to our 20 meter station and invited him to sit down and I slowly rotated the dial from 14.0 to 14.08 or 14.1. As we tuned over the various cw transmissions I pointed out that that was morse code. When we hit the 'digital modes', I also, based on what it sounded like, told him what type of transmission they were.

I was rather surprised, the gentleman got up and left. He didn't make any comments. Unless I missed the mark here, I must have demonstrated that cw was in high use by amateurs and he was then unable to argue that amateurs are not using cw.

From: lar01@sprynet.com
Message-ID: <34af8c4a.2034074@news.sprynet.com>
Source record: 182664

The cw exam I took, back in the mid 60's, required me to receive and send code for 3 consecutie minutes at a speed of 10 wpm from prepared text. Its is possible the person only gave you half the story.

I wouldn't take his comment too seriously.

Learn the code so you can receive and send it comfortably 3 or 4 wpm above the advertised minumum. It is a known fact that, when you are infront of the examiner, volunteer or otherwise, your nervoousness will reduce your speed by a couple of words per minute. Give your self some breathing space, head room.

I have read many newsgroup message from amateurs who say the learning the code is easy. Personally, I had a very hard time learning it. From the time I started to learn it in scouts about about 11 years old until I was able to pass the exam, it took me about 5 years to 'master' it. When I was with the examiner, I was the most nervous I had been, trying to write an exam. I passed. It then took me another 3 or 4 months, with on the air practice, before I was comfortable, communicating in morse code.

In short, the code is 'not' easy to learn. It take persistance and personal dedication, but, it is worth learning. Once you get off the idea that amateur radio is 'voice' communications, you will start to realise the value that cw has.

The Communicatorï¿½ would certainly choose the internet over ham radio.
But experimenters would certainly choose ham radio over the internet.
For me, ham radio is 99% experimentation, primarily with antennas.

> The CW requirement is just helping other people to avoid ham radio and
> use the internet instead.

The CW testing requirement may drive The Communicatorï¿½ toward the internet.
It simply keeps some experimenters away from ham radio because learning
Morse code is perceived to be an obsolete requirement and not worth the
effort by a large number of experimenters.

Some will argue that the "large number of experimenters" have freely
choosen to avoid ham radio as a hobby. IMO, ham radio needs experimenters
more than the experimenters need ham radio. IMO, the lack of such
individuals within the ham radio ranks is the major problem facing the
ARS as we enter the 21st century.

>The Morse requirement is an anachronism that serves only to preserve the
>largely
>self-endowed status of an "elite" minority who wish to "rule the playground"
>like
>a small clique of bullies

Interesting that the term 'elite' has risen here. Because what follows:

>I suspect that most rational people realize that the playground bully is
>*seldom*
>the brightest and most capable individual in the general population ...

is hardly the characteristic of an 'elite' individual.
In this country the 'elite' have become almost pariahs in many circles. And yet, the very word stands for accomplishment, and achievement. The last time I looked these are things to be desired. When did this change?

This whole code-no code debate is nothing new. When I first started experimenting with radio, nearly 30 years ago now, I learned the code as a step, a discipline, into the next phase...while my friends did not have the patience for the key, and went for the quick path into CB. Keeping in mind that my best friend in the world was as technically adept as I was, and could easily have stepped into a Tech class and worked VHF, he was put off by the 'elitism' of the code requirement. And of the hams he had never met. They thought they knew more than anyone else.

Well, having been raised in a ham household, and having associated with hams for most of my life, I can say without a shadow of a doubt, that in fact, most of them do. Those that do, have earned their egos, through study, experience, and experiment. They are in that 'elite' and they have earned their place there.

What is coming out of all this debate, is that the code requirement for access to the ham bands is a roadblock to the 'elite'. Ok, you may never use it...So what? Do you have a driver's licence? Do you parallel park? Its a test requirement. How many had to know hand signals on the written test? How many have ever used them? And yet you still have to pass that portion of the test to get your license. And in today's society, driving is all of a necessity to survival for many. Funny nobody bitches about that test requirement.

Ham radio is not a right, its a hobby. Its an organized hobby, irrespective of the chaos you hear on the bands...And there are rules, and there are requirements to participate in any hobby. I want to be a member of the Ferrari club. Too bad I don't meet the main requirement. But that's the rule. They allow me to come to the meets, and I get the newsletter. But I can't come to the meetings and I can't be a member. I am not allowed into the 'elite'.

The concept that the Amateur radio service is a public access channel is ludicrous. You want to play, then qualify. If there is a code requirement, learn it, get in and then, just like a hand signal on a driver's test, never use it if you don't want to. No one is twisting your arm. But to argue that the code requirement is an impediment to legitimate research, communication and innovation, is absurd. Its a test requirement. Like technical knowledge, it is part of the test. Its the secret handshake to enter the club. Its the knock on the door to the 'elite'...a sign of accomplishment and achievement, and a sign of he willingness to go the 'extra length' to earn membership. And anyone who can't learn it to at least minimum proficiency simply chooses not earn their badge. In this country, choice not to participate, is not generally rewarded with membership. And that's how it should be.

You wanna use the bands? Pass the test.

Incidently, for those who will undoubtedly ask... I never did get my ham license. It turned out that I had no real interest in ragchewing. My interest turned to reception. And I have a very powerful receiving station, where among other things, its not uncommon for me to copy 23 wpm in code. And oddly, no test was required. Professionally, I am a broadcaster, and I sit behind those mikes for a living. As well as work the technical side of domestic broadcast.

And for the record, if you think hams have an elite attitude toward the rest of us, you ain't seen nothing. Broadcast engineers think, not only that they know more than anyone, but that they know pretty much everything. And you know what? Most of them do.
And I'll tell you one final thing...of the broadcast engineers I know.....

over half of them are hams.

Thanks for your time. You may return to your ridiculous debate.

isn't it?"

Only if you don't mind using someone else's equipment (other computer
systems, phone lines) plus an unseen number of people who have to
run and maintain those systems. Pretty costly and complex replacement
for ham radio.

I prefer building my radios and communicating without having to
depend upon others to provide the path. Propagation is free.

My QSOs from Hawaii include hams on South Pacific islands with
no computers nor telephones. If you restrict yourself to just
internet and the telephone, you'll never get a chance to enjoy
meeting these very interesting folks.

I don't know if "most" codeless techs eventually upgrade to a coded
license, you'd have to do a time study of licensees over the past 5 years
to determine if there is any truth to this assessment.

However, the second point in your statement above is true. Most new hams
I know are today getting licensed first as codeless techs. The reason is
quite simple: theory is relatively easy to study, and the codeless tech
license offers the most privileges for the least amount of effort on their
part. It allows them to concentrate on only one thing at a time -- no need
to split studying time between theory and cw.

>The one thing I am rather bothered by is that so many people are

>have been directed to the FRS or elsewhere.

Yup. You've nailed it on the head. I believe the problem exists with the creation of the codeless tech license. (Note: I am not blaming the codeless tech license itself, nor codeless techs.)

Take a look at the FCC licensing. Prior to 2/91, when the codeless tech license came into being, there were ~250k licensed amateurs in the US. In the past seven years, we have seen those numbers almost triple.

Yet, tuning around the bands, I don't hear 3 times as much activity today as I did back in the late 80's. I hear many more people, but not activity.

I believe the problem resides in how amateur radio is sold to people. Back in the late 80's, with the creation of the codeless license, amateur radio was sold to people as a FRS. "Keep in touch with your friends and family, no code test required!" Amateur radio was not billed as a technical service back then, e.g. "Learn remote command and control, telemetry, and other kinds of cool stuff!" (appealing to those computer geniuses we were supposed to get.)

The codeless license was sold to amateur radio as being a means by which all these technical geniuses were going to get involved in ham radio, but who were turned away because the code test was "outdated" or required too much of their busy time to pass in order to get on VHF.

What is truely funny about the codeless tech license is that all it did was remove the 5WPM test for all VHF privileges -- and the 5wpm code test is the easiest of all tests, amounting to little more than a mental table translation. When push comes to shove, the codeless tech license did nothing except remove a relatively minor requirement from the licensing structure.

Yet, what I see today and hear on the radio today are a large number of people with little interest in the aspects of radio (whether technical or in the art of communication) and more in the "personal communication" aspect. Ham radio is a cheap cell phone.

Several years ago I was an officer for the largest radio club in Rhode Island, with 350 members. This club sponsored a repeater, which had coverage in 75% of the state. On the repeater was an autopatch. Guarenteed, at least once a month, when a new member would join, s/he would use the autopatch

an average of 10 times per day. And, you couldn't talk to these people. Try to tell them that the autopatch was there for nominal or emergency use, and isn't supposed to be a replacement for a cell or pay phone, invariably we would get the welfare state mentality reply: "HEY! I PAID MY $20! IT'S MY RIGHT TO USE THE AUTOPATCH HOWEVER I WANT!"

>I just don't think there are many newcomers
>with enough interest in amateur radio that want to be helped.

More often than not they are hostile when you attempt to offer constructive criticism or advise. One time I was chatting on 146.55 simplex with a roundtable, and I kept hearing someone talking, as if they were a few KCs off, like on 146.54. No amount of searching could find them. At one point I thought perhaps they were close to me in a mobile and I was getting some front-end overload, until someone else in the roundtable eventually heard them too. Finally, we found the party talking on the 146.70 repeater (with a 146.10 input). I could hear his signal from 145.8 to 146.6. When I called him on the radio (and later the phone) to tell him he might have a problem with his radio, I was told "F OFF, A-HOLE".

>Take an HF radio to a HAM club meeting and see how long it takes
>to give it away....

I'm running into this problem right now. As President of Rhode Island's second-oldest amateur radio club (est. 1926), we maintain a fully operational club station at a clubhouse the club owns outright. Yet, nobody ever uses it. One or two people might operate on a Friday nite when we're down there, but that's it. Other than our "70th anniversity" special event station last year, where we made over 1000 contacts, the station has been relatively unused. I've personally, out of my own pocket, donated a new pentium computer system and a drake L4B to upgrade the station. We've installed a new ICOM HF/6 meter (IC730, I think is the right number), purchased by the club. New antennas, new coax, totally remodeled station courtesy of our "station manager" and.... no use.

>I'm sure a lot of new hams or people who are thinking about ham radio
>are confused by what they read here. People who are hams who come
>here looking for something interesting or constructive about ham radio
>don't usually stay here for long.

When you really get down to it, though, Jim, what is interesting about amateur radio anymore? The technology is old, and newer technology is outside the engineering capabilities of 99% of today's hams. What is left to talk about? I visit our clubhouse for our weekly friday evening meetings, and we end up talking about our jobs, other events in our lives -- rarely anything "radio" related.

>No code, pro code, coded, uncoded, whatever, what goes on
>here does no good for amateur radio whatsoever. Nobody is going to
>win. Everybody is going to loose. One of these days somebody who
>is holding the chain is going to get very tired of all the noise and
>simply pull the plug.

With delivery of inexpensive personal communications to the masses, amateur radio has outlived its usefulness. Its just that simple.

JAMES shouts:

> CAN YOU IMAGINE THE SIZE OF THE 'TENNA ON THAT HT?

An external multi-turn loop antenna could probably be made to be somewhat portable and compact and still work for 160m. A whip with a large "basket coil" might also work, along with a huge loaded tiger tail. But a typical pull-out telescopic whip with all the loading inside the HT (or a large baseload) used in typical handheld operation would be a joke. It is difficult enough to get handheld antenna efficiency at 20 meters. The high noise level on 160 is one of the things that is difficult to overcome on QRP with short antennas.

OTOH, VHF FM HT vs 10m SSB HT...
I've done side-by-side simplex comparisons between a couple of 4 watt 2m FM HTs with halfwave AEA telescopic whips, and some AH-100 10m SSB HTs with 48inch long base loaded telescopic whips, in rough rocky terrain, the Cascade Mountains of the Northwestern US. The AH-100s won every time, no contest, even on low power. Even with the loss in efficiency of the loaded antennas, there is quite a difference in ground wave propagation for HTs between VHF and 10meters in mountainous terrain! Granted, the benefit of SSB over FM has to be factored in, but even when we stopped down to only 1 watt on 10m, the AH-100s still won.

Bye for now,
Amor Powers

You gotta be joking. SSB big gunner's splatter is 1000% worse than key
clicks. You can technically prove it. Are you guys using A0 mode over
there? Or what kind of RX are you using? Ancient 0-V-2?
I always self monitor my signal thru my back up RX.

Open your eyes fella---here's an excerpt from a posting on the "CW LIST"
from a ham,Charles McKnight WI5S, whose wife is an electronics officer
aboard a merchant marine ship working full time....Charles says...

"The US and most other developed nations are phasing out and no longer
monitoring 500kHz CW. Many other places in the world, CW is the only
thing that is monitored locally.
The failure rate of the GMDSS consoles is curently running 100%.
That's right, every disress signal from them has been a false alarm, at
least as of last summer this was true and probably still is.

The Sailor GMDSS console which has beed installed aboard the ship my wife is sailing on now can only be coaxed through the predeparture tests and is a very troublesome, albiet beautiful piece of equipment. It is claimed by Radio Holland that the operation of the 500kHz equipment in the vicinity of this "sensitive" equipment poses a danger that the high power RF will damage it. If this is true, which I seriosly doubt, it is certainly a piece of junk.
The reality of the situation is that it is the new politically correct way to go and everyone is going that way and no one can stop it because it is all about money, big money. No one cares a damn about safety of life at sea."

So there it is fron the front lines. You say you wanta take a sea cruise?

You can find the 'final word' on harware hacks on the HTX-202 at www.radioshack.com.

Just to save you a short trip - the manual specificaly says, "This radio cannot be modified for
expanded frequencies". I've had mine for about 3 months now - and have searched all I know to search
for any mods (online and other) - so far I've found a grand total of - none (excpet the one that
fries the rig).

RS does show how to setup a patch cable for a TNC at their web site.

Squiggy, Squiggy, Squiggy. You haven't restricted the 'calling' to Mike.
You call EVERYBODY who doesn't fit into your mold of the perfect
beeperless electronics engineer the same thing. You have a deep down
hatred for ham radio and everything it stands for. You need help, bubba.

>At least I had a REASON ...

No, you have two reasons. One, because you're you. Two, because you are
obsessed with this code/nocode baloney to the point where it has become
the most important thing in your life.

>That is WORLDS different that attacking a foreigner for whom English
>is a second language for some silly grammatical mistakes just so you
>can take a cheap shot ... one has to wonder if you would attack "Masa"
>so vigorously if he were a) not Japanese and b) not in favor of the

>you and Jim Kehler are amongst the worst examples of "Ugly Americanism"
>that I have EVER seen. (And I saw some AWFULLY rude and ignorant gringos
>while I lived in Mexico ...)

Our friend Masa is the town clown, the local jerk, the fool - if we teach him
a few more bad words in English, he may even become world class, like you.
Masa would still be the town clown if he could copy Morse code at 50 wpm.
He enjoys playing the fool - the difference between you and Masa is he
realizes he's a fool. You could turn a church sermon into a no code debate,
Squiggy.

You aren't interested in ham radio - you are only interested in making noise.

You are bitter because you haven't gotten anything out of ham radio because
you haven't put anything in to it. You are very confused.

Let's look at a few things you have said recently:

First, you told somebody:

>Message-ID: <01bd10ca$2914a920$0100005a@wa6vse>

>Yeah ... join No Code International (http://www.nocode.org) rather than
>sending your money to Oldington so they can use it to lobby AGAINST your
>interests and keep ham radio stagnated in the past.

Then you turn around and say:

>Message-ID: <01bd0f4c$55535e20$0100005a@wa6vse>

>I've been a dues-paying member of the ARRL since at least 1975, with only a
>brief lapse in membership while I was out of the country and didn't get a
>renewal notice.

So what is it Sqiggy, are you suffering from a split personality, or are you paying the ARRL 'to lobby AGAINST your interests' one day and then advising somebody else NOT to do the same the next day?

I guess the ARRL is OK for you but not for anybody else. Kinda like CW tests are OK for me but not for you, right ?

Kinda looks to me like you are playing both sides of the fence here Squiggy, and hoping the fence will cave in......

Before you bother to spend an hour trying to type out some explaination for the above, remeber that you you also said:

>Message-ID: <01bd1924$82019220$0100005a@wa6vse>

>The ARRL is ham radio's worst enemy.

>they are just a bunch of mealy-mouthed, weasle-worded
>politicians ... comparable in ethics and credibility to Bill Clinton,
>who is unquestionably the most corrupt, scumbag president since LBJ.

The ARRL is ham radio's worst enemy.... so you have been sending them money for 22 years to support the cause - your REAL cause - you want ham radio to go away. Mealy mouthed, weasle-worded politicians, whom you have supported for the last 22 years by sending them money.....

I don't think you are a hundred percent correct in that last quote, Squiggy. I think people like YOU are ham radios worst enemy. You're like the 4 year old kid whose ice cream fell on the floor - first thing you want to do is grab the other kids ice cream and throw it on the floor - if you can't have any, then you

don't want anybody else to have any either.

You have been a technician class ham radio operator for 25+ years. Nothing about ham radio ever excited you, intrigued you, got you interested. But you did notice along the way that other people in ham radio were having a lot more 'fun' than you were, and that pissed you off.

So then along came the no code tech license, no code international, usenet, and there you were, pissed off, just waiting to jump on the band wagon and see if you could help flush the toilet. You always wanted to be a HERO instead of a ZERO, so here you are typing, in hopes of confusing the sheep.

You have ZERO excuse for being a tech, Squiggy. You have expounded many times in the last two years how much you know about electronics. And a few times you have even slipped up and said:

>Message-ID: <01bd187c$5c2853c0$0100005a@wa6vse>

>I know (and passed a test on) the code ... I'm not as fast as the High Priests
>of Morseodism in Oldington and others like Roll, Carroll, etc. would like to
>see as "The Standard of Excellence," but I could copy CQ at probably 40 wpm ...

Which really blows a big hole in your 'I wanna get on HF to do digital experimentation and bring ham radio into the 21st' century but the code test is keeping me off HF' baloney. If you can copy a CQ at 40 wpm, you can damn sure pass a 13 WPM code test and get on HF and do all the experimenting you want - but that's not the real agenda - your real agenda is to cause as much hate and discontent as possible and see if you help throw the ice cream on the floor.

You're a fraud, Squiggy. A fake. Sad thing is, you have worked yourself up into such a rage and you spend so much time slobbering over a keyboard, that you are about the only one left here that doesn't realize that. You need help. Professional help.

You are not interested in ham radio - you are only interested in making noise.

But I'll tell you what I am going to do. ARRL membership now, I think is $36 a year. I have no idea what it was 22 years ago, so I will use todays figure. $36 times 22 years is about $792. We'll round if off to $800.

I'm going to give you a refund, so you can have back everything you have put into ham radio. You throw away the usenet software and go find a good head doctor.

You explain to him that you are consumed by the fact that you hate ham radio, and ask him if he can give you some help. If he says yes, you tell him to send me the bill for the first $800 worth. I'll look at it as my investment in the future of ham radio......

I've noticed you seem to have a problem finding things I post in usenet lately, Squiggy, so I'll email you a copy of this to make sure you get it. My usenet feed just isn't that reliable, I guess.

73, Jim KH2D

Hi Cec, So the good doctor (PhD in EE) is a no-code tech? Wonderful! Make sure he reads the FCC's version of our charter (S97.1). Have him join a local RACES or ARES group so he can perform community service (our primary mission as outlined in S97.1). (Hopefully, getting his feet wet during a flood won't be beneath his dignity.) Also, S97.1e requires him to work some DX occasionally. Make sure he reads the .dx newsgroup.

Remind him not to feel like an outcast, for you'll always make your station available to him for his cutting-edge HF research. If that's not good enough for him, then maybe he's not as altruistic as we thought.

Source record: 182392

As one person put it to another, who asked the same question on the internet serval months ago, if someone has to give you a compelling reason for you to upgrade then you really haven't caught on to what amateur radio is about.

I got onto amateur radio, back in the mid 60's, because of what I forsaw that it would give me. I had polio at age 5. Most of the people I knew, or met me sight first, saw my physical imperfections and prejudged me as someone who was disabled.

With amateur radio they met me via the telegraph key and mike first. The fact that I had passed our amateur exam, I am Canadian, and a little over a year later, the advanced showed them that I was talented. My disability didn't hold me back them.

During the later half of the 60's my station was not the fanciest but is was creative, some homebrew stuff. A lot of amateurs were impressed at what I was able to do with very little.

During the first half of the 70's, I rebuilt existing equipment, at a chronic care hospital, to allow the physically diabled, quads and paras, to operate their station by themselfs. That accomplishment, alone, gave me high recognition.

I also got involved in other public relations events and volunteer work.

No one can tell you why you should upgrade. That has to be a personal decision/choice for you to want to upgrade. As many people have told me, and I found out for myself, amateur radio will only give you what you are prepared to give it first. The more effort you put into it up front the more you will get back afterward.

I'm an inactive no-coder, digital modes was all I got a license for in the
first place. The only time I ever used voice was driving to / from work or to
use the local phone-patch. The current AM / FM / SSB modes are waste of
spectrum. CW, is a great space-saver, but no matter how "fast" you are at it,
it's still painfully slow compared to digital modes. Even though digital modes
use up the same spectrum as their analog modulation, they are far more
efficient, because more can be sent in less time, and at odd hours. It makes
no difference if a real person is there to receive it or not, it will be
stored and read later.
>

>The rabid pro-coders insist on trying to say "All they want to do is to

I personally think "contesting" and "paper chasing" are a waste of time and
spectrum, and should be banned. But it keeps the magazines going.....
Maybe we could make an execption for "Field Day" since it is alleged
to actually have a purpose.

no, your misunderstanding the rule that im talking about. it mearly states that using a communications device to break the law,(city,state county or federal) is a federal crime. the fact that some one has a scanner or ham radio in their vehicle is not reasonable cause to believe you are breaking a law. HOWEVER, if you are caught breaking a law and have those devices in your vehicle or on your person, then it is reasonable cause for law enforcement to think you are using them to assist in the breaking of that law.
ALSO, under the drug enforcement act of 1986, if you have a communications device (beeper,scanner,cell phone) on your person, while posessing any controled substance, the federal act mandates a 10 year federal prison term automatically..
so, keep the radios where they are. just be aware that the feds have armed law enforcement with more reasons to open that rule of suspiction more in their favor. if you have a scanner in your car, and tell the cop "hey i just like listening in" he has the laditude to use his own judgement in the situation. in a state like tenn. or texas, where everyone is related to each other, your not going to quote 1st,2nd,4th ammendment rights and scare him.

with my time than take a test." syndrome.

>What I would like to see is a leveling
>of that playing field so that imminently qualified potential HF hams
>are not barred from participation by obsolete regulations.

Well Cecil, using this logic they shouldn't even have to take theory
exams, since 1) they are already technical geniuses, and 2) all the
electronics theory on amateur exams is obsolete anyway (SSB, RTTY, etc.)

So, my solution would be just to send you a stack of licenses and a vending
machine. You can stick them down in the cafeteria, and when all the geniuses
take a twinkie break, they can spend their leftover 35 cents from their
candybar purchase on an amateur ticket.

>Most of the guys responding to my company's internal survey say,
>"I just don't want to waste my precious time learning something useless

What is the next aspect of amateur radio they are going to find "useless"?
Public service? Helping out other hams? These people don't sound like very
good hams. Part of being a ham is part self-sacrifice to help others. It
doesn't sound like this prima-donnas are interested in that at all.

This is in direct contridiction to FCC license data contained at
http://www.speroni.com/FCC, which lists the number of licensed
amateurs at 678k in Dec 97, up from 645K in Dec 96. Furthermore,
the "licenses by class" breakdown shows that the number of licenses
in all categories (even Novice!) increased from Dec of last year
to date.

SORRY DEPUTY DOG, THE LAWS IN THIS COUNTRY HAVE CHANGED SINCE YOU BEEN ON PATROL.
with the passing of three federal acts in the past ten years, state and local police have an upper hand on what was " a federal " matter". they now have the backing and support of the regional F.B.I.,DEA. and ATF offices to act in the interest of those agencys. if your caught with drugs on you, and you have a car phone on your person, you get handed over to the feds who now charge you with a felony, even if the drugs you were carrying only carry a slap on the hands on the local level.
THE SIMPLE FACT IS, IF YOU WANT TO CARRY A SCANNER, PAGER, CAR PHONE IN TODAYS ENVIROMENT, YOU HAVE BETER SHOW MORE THAN "INTEREST". now maybe i'm being a little extreme in my views, but with a brother in the mass state police for 14yrs, i would submit that people cant hide behind "individual rights" anymore.

You probably don't have a college degree, so that makes you a lesser person in your mind, you are inferior to the educated ham, even though he or she may actually be a "No-Code Tech". Your jealousy is showing through. I don't care how well you can do CW, if you don't understand how and why that radio works, you shouldn't be using it. In your opinion because I choose to not do CW, I shouldn't have a radio either.....

Dear K0MB,

You might use that library card to find a copy of "The Amateur Code"
by Paul Segal. You seem especially ignorant about the parts where
it talks about "considerate", "helpful", and similar topics.

If you don't like some of the "ignorant" questions you see, then
simply ignore them. It is not necessary for you to post patronizing
and sarcastic answers to demonstrate your "superior" knowledge and
bad manners.

Try "www.qrz.com" on the web.

I must warn you that there are *very* few amateur radio stations in
Chad. In over 35 years on the air, I have contacted less than 20
stations there.

>made a mistake" (8 dits, right Bill?)

Generally they used the Prisoner's Code. That puts the alphabet in a 5x5
matrix (I and J share a spot), and is sent by tapping out the row and column
for the character. So A is tap <pause> tap, B is tap tap <pause> tap, F is
tap <pause> tap tap, etc.

To send Morse by tapping, you need two distinctive taps, one for element
start and the other for element end. Telegraph sounders gave you that.
Key down made a click sound and key up made a clack sound. That way
you could determine element timing and thus determine what was sent.
With just clicks, you couldn't tell a dit from an intraelement space.

You know, Dwight, I think that is WHY the Kenicoyasawhooie radio sets
can't do anything like reasonable CW, anymore. The designers don't have
a clue of what it is all about --- they may have the brains and the fancy
Ph.D's, EE's or whatever, but they can't seem to manage good QSK, compared
to the Ten-Tec crew at a practical level. I have always wondered why......

Maybe a dit could be a tap, and a dah could be a "scrape" on the pipe. I
was able to send "CQ" on my desktop just now with a metal ruler that way.

Hope I never have to test it under "field" conditions HI HI

The code used at Hanoi Hilton (and other such places) was not Morse,
but a 5x5 grid in which 25 letters of the alphabet (I don't recall
which one they left out) were sent by identifying their position
(row x column) in two set of taps. To illustrate:

abcde
fghij
klmno
pqrst
uvwxy

To send the letter "k" you would tap three times for "third row" and
then tap once for "first column". (The above example assumes "Z" was
not in their grid, but I don't recall if that was the missing letter.)

SOS distress signal era ends

LONDON, Jan. 1 (UPI) _ The Morse code distress signal SOS is now officially history, but not before a 13,000 ton Bahamas-registered ship used
it to call for help 790 miles west of Ireland.

The SOS signal and official use of Morse Code was formally scrapped worldwide at midnight.

The ship MV Oak was headed from Canada to Liverpool with a crew of 26 when its cargo of wood shifted in storm-force winds and it lost all engine
power
Wednesday.

The ship tapped out Morse code's final SOS and the signals were picked up in Britain and passed to the Falmouth coastguard. The Coast Guard initially
considered the message a joke signaling the end of an era.

Guard spokesman Gerry Wood said, ``We haven't had a Morse distress message for years. It was almost too perfect.''

But he said they reacted knowing ``someone was in distress... as nobody ever sends an SOS signal as an exercise.''

Ship signals are now dispatched by modern satellite voice and computer communication.

The Morse code system dates back to 1908 when British and German radio operators agreed to use the SOS message.

The letters were chosen because they are simple to tap out in Morse code: dot-dot-dot-dash-dash-dash-dot-dot-dot.

Wednesday's message from the Oak said only ``SOS. SOS. This is Oak. Position 53 16 N, 24 59 W. Stop engine. We need assistance.''

British Coast Guard officials report the ship has been abandoned and the nearest ship is some 400 miles away. But the Oak's crew and captain are reportedly aboard lifeboats.

of course they don't have a clue. It's no longer (relatively))
famous and effective way of communication in today's standards.

Comparing Amateur Radio to the internet,
cute@radiotelephone.net.ham wrote:

> The internet is much faster and efficient. There are more people on
> the internet than the ham radio.

That is a meaningless comparison. Amateur Radio and the internet do not have equivalent functions, just as television and daily printed newspapers to not have equivalent functions. There are more people watching TV than are reading newspapers, but newspapers continue to thrive.

>a means of communications period).
>
> The Department of Defense does not even require its Amateur MARS
>operators to know Morse before using the HF bands (MARS operators can
>use the MARS HF Bands with only a Technician class license).

agreed again !! that's right, morse is not a requirement for HF
(except amateur) and many people have ability to use HF and to use it
responsibly without knowing morse. that's right. removing morse
from amateur should create a same result.

> As for Morse being a fall-back means of communications in times of
>disaster, if necessary I can use a computer to send/receive Morse
>without knowing a single bit of code myself (if there is power to
>operate my radio, there is power to operate my laptop).

and how often this disaster happens ?? if this kinda disaster
happens, electricity will go off so you can't use your radio anyway...
and no one will allow you to get into someone's car and make his
battery dead by using your radio...

> And it is nonsense to suggest that the Amateur HF bands will go to
>hell in a handbasket if Morse code is dropped.
> The military,
>government, public service, and commercial stations, frequencies have

>not gone to hell in a handbasket because the Morse requirement was
>dropped.

agreed completely. in fact, there was same kinda argument for
no-code license (created for above 30 MHz) that all VHF and UHF would
become disaster. it didn't happen.

> The CB band is the way it is because there is no license requirement
>(and therefore no accountability). The lack of Morse had nothing to do
>with the CB band going bad (because it never was a requirement for the
>CB band, even before the band went bad).

agreed !!

> Yes, there should definately be a test to obtain an Amateur license.
>But that test should evolve as the Amateur radio service evolves. Morse
>was once an important part of Amateur radio. That is no longer true
>today. The test should reflect that change.

CB radio is now even dying. Many of channels in Montreal area are
underused. I hardly hear anything on the channels. Wel... I pick
up something each 10 minutes or so while I scan, but that's it. I
am sure ham radio will follow the same way. The radio in general is
no longer (relatively) efficient, cheap and effective way of
communication.

Hello. I need a good tech/novice study book for my father. I have a copy of Now Your Talking, but it is about 2 years old and the question pool has changed. Can anyone recommend a good substitute? Is there a copy of this book with the current questions? Radio Shack has stopped carrying this series. They now have the Gordon West books, which are good if you know the theory and just need to learn the questions, but no good at all for someone who is not technical. If you cn recommend a good study book please email me. Thank you.

But why didn't they use the more whiz-bang modes to communicate? Clover
should have worked (provided someone else who also had Clover

capabilities had made an appointment for the emergency qso). RTTY should have worked. Or packet. Heck, the message would have made it that distance within 3-4 days, provided there were with VHF range of a packet station. Or satellite or voice or something...why did they have to use CW to get saved??? Did these people really *deserve* to get saved when they used such an outdated mode to call out for help?

Anti-coders will need to pretend that this just didn't happen.

You're absolutely right. But the fact remains that a CW sending test ALONE cannot rationally satisfy the requirement to "copy by ear" (which was the question posed in the original post).

Welp, there you have it:

1) contesting and "paper chasing" should be 'banned' because they are a waste
of spectrum and time,
2) CW is a waste of spectrum

thus

3) CW should be banned too.

(of course, the poster wouldn't come right out and say that, because it would
cause too much of an uproar.)

I wonder what would happen to amateur radio if everyone was able to "ban"
the aspects of the hobby they personally don't happen to like?

No, the whole point of the anti-code movement is NOT to ban the
use of CW, as it is undoubtedly a good weak-signal mode, but
simply NOT to have it as an arbitrary limit to HF access for
amateurs.
I have no problem with using CW, its REQUIRING CW for
something that doesn't need it that I have the problem with!

Duncan.

Source record: 182463

I don't know what 70 watts will do, but 50 is fine on 6m, 2m, and 440. The sheet metal seems a little thin so you have to back up the mount if you use anything bigger than a quarter wave. I have one antenna mounted to the roof rack and another thru the roof.
I honestly haven't warmed up to the Venture yet. I had a Lumina APV for 7 1/2 years and hated to get rid of it. The Venture has many refinements which I guess I'll learn to appreciate. Looked at the Chrysler/Dodge/Plymouth line but found them to be very cheaply made under the surface. Never been a fan of Ford's so I don't know about them. Mileage on the venture is ok, and may improve as it gets broken in. The Lumina averaged 22 around town, the Venture is running 18-19.

Hope that helps,
N9WIL

Following is posted for info of anyone out there who may have sailed deepsea and used the services of UK Coast Radio stations in years gone by:-

It's Hogmanay morning, 31st December 1997, and Radio Officer Bob Baker at Stonehaven Radio/GND (the control station for the United Kingdom Coast radio station service) is alerted by the sound of an automatic alarm signal on 500kHz. Of course the whole world knows that Morse is outdated and never used for distress purposes nowadays - which Coast Radio Station might this be, about to relay a distress broadcast? Bob waited for the DDD SOS signal, which would have indicated the relay of a distress message, only to hear dit-dit-dit dah-dah-dah-dit-dit-dit - this was no relay, this was no drill, this was the real thing.

Bob received the SOS call from MV OAK/C6MX8 on the Landsend Radio/GLD receiver, acknowledged receipt to the ship and then, with his colleagues at the radio station, set about the routine of alerting other shipping and the shore rescue authorities and coordinated the distress communications on 500kHz.

Since 1901 the callsign GLD had been heard on air and had carried on a 24-hour listening watch for shipping in distress since that year. Today, 31st December 1997, was the last day of that watch - but GLD was in action again!

==========

At 312348z December 1997 Graham Mercer, Radio Officer at Portpatrick Radio/GPK, (Radio Amateur callsign GM4BES) set the ball rolling for the closure of the United Kingdom's 500kHz Morse Telegraphy service with a final broadcast on 500kHz. Graham tells us,
"I have to admit that my hand was shakier than it was during any SOS situations that I have handled over the last 29 years from GPK! .... A VERY SAD occasion indeed."

"My broadcast was brief, as there were other closure broadcasts from GKR, GCC and GLD to follow mine (in that order) ...The whole lot was scheduled to be concluded by midnight. In the event, the response to the first broadcast from GPK, almost occupied the entire time slot!.... Responses first from EJM (specially resurrected on 500Khz for the occasion by RO Finbar {EI0CF}) ... followed by EAC, OST, EAO, SAA, SPE, OXZ, IAR, VCM, GKR, GCC, GLD and others...."

Graham's closing broadcast had stated,
"in 1844 QTC nr1 fm Samuel Morse was what had God wrought?"

"all R/O's now ken the answer to this"

Wick Radio/GKR's closure message (a long one!) was aptly
despatched by Tom McLennan (retired Radio Officer) with his very
distinctive fist with the subsequent communications being shared by
serving Radio Officer Tony fell.

Cullercoats Radio/GCC's Final broadcast was a poetic Geordie dittie
... sent by Bob Baker at GND (the same man who had been receiving the
SOS call earlier in the day) who was remotely controlling the GCC equipment.

Not to be outdone in the poetry stakes, Landsend Radio/GLD's final
broadcast, sent by the steady fist of David Nancarrow, Radio Officer,
(Amateur Radio callsign G3RID), included the text,
"but now the time has come,
ours is not to reason why,
the satellites are calling,
our morse transmissions die."
The broadcast ended with,
"Marconi, if you can hear us, we salute you"

Prior to the final broadcasts, at Landsend serving Radio Officer John
Chappell (Amateur Radio calsign G3XRJ) had been busy dealing media
coverage and interviews recording the end of a proud service. Many
members of GLD's staff, past and present, were also on hand to
witness the event and the same was true at Stonehaven/GND. At
Portpatrick retired Radio Officer Peter Howe joined Graham for the
occasion and, as already reported, at Wick Tom McLennan not only
attended but put his fist "on air" for a final time.

Several faxes were later received by the closing stations, from
ex-seagoing R/Os, who had taken the trouble to listen to the closure
broadcasts, and expressed their thanks for the work of the service
over the years.

==========

The callsign GLD first came on air in 1901 from Lizard Radio,
transferrng to Landsend Radio in 1913, and is probably one of the
most famous Coast Radio Station callsigns in the world. The code
LEFO in a radiotelegram (meaning Lands End for orders) may have been
a simple instruction to a ship to head for the UK, but for Radio
Officers worldwide it meant listening out for GLD's signals. Over
the passing years GLD has been a link, in peacetime and at war, for
countless mariners from all over the world. The station has a long
history of being there to help seafarers.

Portpatrick Radio first came on air in 1905 as a part-time Admiralty
station with the callsign BYS. In 1921, following a collision and
sinking in which over 30 lives were lost at a time when the radio
station was off watch, a rapid change of command took place and
Portpatrick came under GPO control maintaining 24 hour watch and with
a callsign change to GPK. It was GPK which received the first SOS

of the 2nd World War, when the steamer Athenia/GFDM was sunk by a torpedo on the first day of hostilities. It was also GPK which carried out the distress communications with the railway steamer Princess Victoria/GZMN on the day it sank with large loss of life - listening to the ship's drowning Radio Officer apologizing for his poor Morse Code as he reported that the ship was "on beam end".

Wick Radio was another Admiralty station, opening around 1907 under the callsign BYG. The station transferred to the GPO in 1920 when the callsign GKR came into use. At the northern extremity of the UK mainland, GKR has been involved in many distress incidents involving ships voyaging some of the world's most inhospitable waters. The station was also a main link for the UK's deepsea trawler fleet, with a Morse Telegraphy service on HF keeping them in touch with the fleets at their fishing ground off Norway, Spitzbergen, the White Sea and Bear Island, Iceland, Greenland and Newfoundland.

Cullercoats Radio/GCC commenced life in 1906, built by the Amalgamated Radio Telegraph Company. In 1909 ownership transferred to the Poulsen Company of Denmark and in 1912 the station came under GPO control.

Some historical information on the UK Coast Radio Station service is being constructed at:-
http://www.users.zetnet.co.uk/rdixon/crs.htm

Today Cullercoats, Landsend, Portpatrick and Wick continue in operation as part of the UK's radiotelephony Coast Radio Station network, along with the stations at Stonehaven, Humber and Hebrides. Cullercoats, Niton and Portpatrick provide the UK's Navtex service. And the last bastion of Morse Code in the UK is Portishead Radio/GKA, operating on the maritime HF bands.

==========

The UK's 500kHz Morse Telegraphy service finally closed in the early hours of 1st january 1998 with a last exchange between GLD and GPK:-

GLD de GPK
73 David, lets hope GMDSS is as gud

Lets look at a couple of cases.

First was in 1964, Anchorage Alaska. Major Earthquake.
Only communicaqtions in or out for a few days was Ham Radio.

Mexico City, 1989. Major earthquake. A voice net operated on
20 meters (14 mhz) from San Diego to Mexico City. Purpose of
the net was to coordinate what medical supplies/personnel
needed to help the victims.

Now, take away ham radio, depend on the internet (and telephone lines)
and let a major quake hit anchorage .. or Mexico City .. what gets
handled will be via internber .. sure hope those quakes don't disrupt
telephone service.

8 baud? That's interesting.

Kind of scary that some folks would complain about taking a test
in which their brains would only have to function at 1/5000 the
speed of their modem.

Karl wrote: The fact that the ARRL membership on only about 25%
of US hams is proof enough of their lies..."

The point of my article went *way* over your head, Karl. Your buddy,
CB Bimbo, wanted to know why the ARRL represented itself as the
voice of amateur radio. I showed him just the opposite is true - the
FCC looks to the ARRL as our voice.

In a like manner, Congress, and the population in general, view the NRA as
the voice of all gun owners; would you care to guess just how many gun
owners are members of the NRA? 1%? 0.1%?? (Don't forget the drug dealers
and other criminals are "gun owners.") Tomorrow I'll check with
the library and attempt to get the actual figures for you.

When the government considers an organization as a representative
of a certain body of people, the numbers make no difference at all.

Jeff KH2PZ/7, K7/H0CW

P.S. In my original post I made an error: In 1914 the League
established the very first transcontinental wire-less communications
network. This was one year *before* the transcontinental telephone
system was established. Thus it was the hams, under the leadership
of the ARRL, who first tied all the states together for almost
instantaneous communication.

You think? Then why are so many codeless hams pulling duty as the
officers of their local clubs? Running walk/bikathon communications?
Running Severe Weather Nets? Teaching classes to prospective hams?
Getting CPR training to club members? Is it because they want a free
ride? No, its because the more qualified old duffers are taking the
free ride. They passed their self serving 13/20WPM exam and then went
in to retirement.

Hello, I have a Knwd. TS-830S in very good condition with manual and box. I Also have a MFJ 929E tuner, and about 80ft. of rg-8 coax. Also, I have a Compaq notebook computer (486/25) which I'll admit isn't the fastest thing, but it does quite nicely on packet, rtty, cw, etc. It has a fair amount of ham software on it, and a lot of other electronics programs. I would like to trade the two for a nice computer system which has good graphics and audio capabilities. Any offers are much appreciated. Thank you, and good day. > they see fit.

No, they don't have a RIGHT to do anything. They have a priviledge to use
the radio in accordance with the rules and common operating proceedures
of the service in which they are using it. Example: I have have a ham license.
That ham license doesn't give me the right to hit you on the head with my
VHF radio, although, at this point, I think that might be a good use for a VHF
radio.

As Mike mentioned, most hams understand that the autopatch on a VHF or UHF
repeater is there for a) emergency calls and b) once in a while other calls and
is not a replacment for a cell phone. Most people with ham licenses that shoud
have little yellow FRS radios instead don't understand that. Thus the conflict.

> Depends on what your idea of "helping" them is. If it includes criticizing

>pocket, a phone line, and $19.95/month (or less) can purchase a used Pentium
>computer and accomplish the same thing, regardless of band conditions,

That's an extremely easy question to answer. Two part answer.

1. The magic of radio. I won't explain that to you Rambo, and I don't expect
you to understand it.

2. Any idiot can buy a computer and sign up with an ISP and communicate around
the world (see rec.radio.amateur.ANYTHING for proof). I can put a piece of
wire up in a tree and communicate around the world, no commercial power, no ISP
required. Most people can't do that, so it makes me feel I accomplished
something. Plus I enjoy doing it. It's fun.

>Maybe it's time to pay
>our final respects to "the old girl" and lie her to rest, gracefully, before
>the government and the commerical interests do it for us. Think about it.

We have though about it. Obviously you have too. I have also thought about
shooting my wife in the head instead of letting the invading armies ravage her.

Let me ask you a question, Big Ole Tough Talking CB Rambo, and we'll all
get to see if you have what it takes to live up to your little signature box.
Talk tough, tell us the truth, so we can see just how tough you really are.

Queston: If the 'old girl' was to die tommorrow, how will that make you feel,
and why ?

Hi Brian. The 'codeless' hams in your old club aren't pulling any duty.
The only thing they are pulling is in their pants..... Most of them can't
even spell public service, more less do it. But now their favorite toy
is broken, and we aren't going to fix it for them anymore, so we'll see
how long it takes until all the HT's are in the closet with a dead battery.

George, monitor noise can be a tuff one to get rid of. Usually, the noise is
being picked up by the antenna. Radio Shack has some snap on cores that
you can try over the monitor cables, I've had luck in some cases with them,
but on some monitors had to use more than one. Don't know what kind of
antenna you are using, but hopefully it is fed with coax. If you can't get rid
of the noise in the house, try moving the antenna as far away as possible.

[misc. Mikey bullshit lies deleted for brevity]

> Stevenson and his prima-donnas fail to recognize that there are two
> parts to amateur radio. There is the technical aspect, which is very
> important.

Talk about hypocrisy ... this from Mikey "UPS/FedEx shipping skills are
more important to hams than technical knowledge so they can ship their
rice-boxes back to the factory for repair."

> However, it is less important today than 20 years ago.

Where in Part 97 does it say that Mikey? That is what nincompoops like
you would LIKE everyone to believe, since you're obviously a technical
idiot of the worst sort, but whether YOU like it or not, ham radio is
still SUPPOSED to be a primarily technical service.

> Electronic circuits, with custom manufacturered, non-documented ICs,
> are more difficult to design and engineer these days than the typical
> tube rig the average ham built for his shack 30 years ago.

That is absurd. Today's IC technology makes it easier than ever to build
an entire radio (using 1-4 ICs total, plus a few passives). The fact that
so many of today's hams are appliance-operating techno-idiots like Mikey
who don't care enough about radio to develop the necessary skills is sad
and very dangerous to the future survival of ham radio.

> Equally, perhaps even more important, is the art of communication.

Give us a break, Mikey ... Morse is certainly nowhere near "the state of
the art" in communications, it has been abandoned by all other services,
is virtually never used for public service/emergency communications any
more, etc.

To assert, as you seem to be doing, that because Morse requires conditioning
in a Pavlovian response ("skill" seems an overly generous term) that it
is "art" is pretty lame.

While I agree that emergency/public service communications are important,
it us totally dishonest (a trait you seem thoroughly steeped in) for you
to imply that Morse has any importance in that venue.

> Let's look at things another way: which is more likely to be remembered
> by people: 1) that a ham created new technology which ultimately was
> engineered into your cell phone, or 2) that hams were able to assist
> in your local disaster communications during the last hurricane?

Probably b), but that has virtually NOTHING to do with Morse ... because
Morse is virtually universally NOT used in those scenarios any more.
The hundreds of hours per operator wasted on forced/coerced learning of
seldom/never used Morse "skills" that no EMS agency wants any more would
be FAR better spent becoming technically competent and preparing for some
realistic disaster scenarios with a realistic complement of modern, reliable,
redundant equipment.

> Technical knowledge is important, for competence. In-depth technical
> knowledge at the engineering level is no longer required in amateur radio.
> Instead, ability to communicate effectively is the important skill.
> Remember: image is everything. When all people see are the "public service"
> aspects of our hobby, its those elements we have to impress them with.
> They're not going to know (or care) that some IC in their cell phone was
> engineered by a ham operator.

Yes, and when they see the limitations of OOK Morse relative to the modern
forms of communications with which the general public is quite familiar, they
will think "Where the hell did THIS dimwitted bunch of old FOOLS come from?"

Source record: 182490

When one asks a question, it's important to guide the person to the proper reference text. Once in the text, he'll usually discover much more than he was initially looking for, and will know where to look when he has future questions. Why duplicate info contained in texts onto here?

Also, antenna queries are supposed to be asked on the .antenna news-group. We created such speciality NGs to help reduce the traffic on this NG (his antenna question probably generated at least 25 responses here).

Also, his question involved very elementary theory he was suppose to have learned in studying for his license. He later admitted he didn't know the answer to his question because he had only memorized the answers to the license exam. With an attitude such as that, you shouldn't be surprised at the remarks his query generated.

Finally, he's been a pest on this NG for quite some time. Cry "wolf" enough times and folks begin to detest the crier's presence.

I hope that explains the responses you saw to his antenna question.

Jeffy's assertion is absurd ... the ARRL is a minority organization
that falsely represents itself as "the representative of all US hams."

The fact that ARRL membership is only about 25% of US hams is
proof enough of their lies. That many, many "members" such as
myself are dissenters who have reluctantly kept membership only
so we could "keep an eye on the shenanigans" and avoid the classic
"if you're not a member you have no right to complain about league
policies" argument.

>>license.
>
>Now HERE'S a qualified voice to comment on ham radio issues.

And I suppose by that same logic, you'd require he put a bullet in his head to be qualified to answer a suicide hotline?

Its easy to take a single line or two out of context to make a point. However, absent address of the entire argument, the point is less than compelling.

As I understand it, they didn't use any form of Morse at all, but used
something called the "prisoner's code." How this works I haven't a
clue, since I've never been in prison. <g>

So far, so good.

Since WW II, however, hams have become pretty much irrelevant to the
needs of government, and are becoming more so every day.

>There are hundreds more examples I could provide, Bimbo, of why
>the government believes the ARRL and amateur radio are synonymous.
>Of course, you're too blinded by some hostility or ignorance to see the

>larger picture.

What the government and the ARRL may believe does not necessarily equate to the facts, however. Many hams feel (with good reason, I believe) that the ARRL does not represent the wishes and needs of Ham Radio and individual hams nearly as well as it did decades ago. The ARRL has turned into a bloated, wealthy bureaucracy which seems more intent on perpetuating itself and consolidating its power than it does in representing the best interests of the hobby.

Of course, there is no real alternative, so it behooves the rank and file amateur to find some way of kicking them out of their rut and getting them more involved in moving the hobby into the new millennium.

Also, if you're not a member of the League, you have no standing to complain about it.

Message-ID: <34B0722C.7D84263@provide.net>
Source record: 182504

First time I have ever worked a RTTY contest. I am confused as to the point's count.
On ARRL's page, it says:
1: QSO Points Count one point for each completed QSO.
2: Multipliers Each US state (except KH6 and KL7), each VE province plus VE8 and VY1) and each DXCC country.
KH6 and KL7 count only as separate DXCC countries.

Say I worked a total of 56 station's. Of this, 38 were different states and 6 were Canadian station's with no contact's outside the US. What formula do I use?

Michael,
The amount of USA global involvement today far surpasses the
ability to just have enough talented bilingual employees or
hiring major $$$ translators. We must cooperatively work
with people from other countries and it is our job to understand
and get along. If we don't, the competition will.

When I work with someone who doesn't have English as their primary
language, I don't need to have them capable of writing the
great American novel, I just need to be able to understand
their comments, ideas, etc... even if that isn't in the most
eloquent or perfect usage of English.

* How may I obtain the latest copy of the Elmers List?
* Acknowledgements

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only

not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and

"Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to

ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many
modes and radios.

My home page above is a Link page I mostly use to find what I am
looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at
this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and

C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

if I can't help with something, I probably know someone who can.

Carl Estey WA0CQG

wa0cqg@tapr.org

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by
organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail
address above.

* Batteries
* Power Supplies

I am a practicing electronics engineer (for over 35 years) with
expertise in solving problems in the design of linear circuits, audio
signal processors, low frequency (DC to 10 MHz), low noise, field

effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In

mailbox
* Index and subject list of all Homing In columns in 73 Magazine
through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is
not affiliated with 73 Magazine, Wayne Green Enterprises, or any other
commercial entity.

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than

a nightlight is bouncing off the ionosphere and ground three times,
and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as
hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland
Amateur Radio Clubs, and operate with both during public service
events. I have been the chief HF operator at University of Maryland
HF-related events (Field Day and Sweepstakes) for the past three
years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions,
testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well
as taught a 5 WPM code class. I have been told that I have a knack for
describing complex subjects in ways that make them far easier for
laypeople to understand.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

* Radio Officer and Chairman of Operations Committee for Lycoming County, Pennsylvania ARES/RACES/SKYWARN program
* Assistant EC for my local district, and Pennsylvania State Director for NACEC
* President of Keystone Amateur Radio Association (KARA)
* President of The Bald Eagle Repeater Association

- - I suspect that I would be classified as a "classic" amateur operator.
- - While not a proficient homebrewer/RF designer (yet), I pride myself on
- - the ability to construct equipment from kits, as well as being able to
- - competently debug and fix the equipment I use - this is a set of
- - skills that is becoming too rare in our "appliance operator" world.
+ I have been a ham since 15. I have been an Extra class operator since
+ age 17, and a VE since age 18. [_Editor's note:_Possibly the youngest
+ Contact VE ever.]

- - While many see a need to run high power and large antennas, I do not.
- - I live in a development with antenna restrictions, and I choose to not
- - expose my family and neighbors to high RF fields.
+ I am an avid HF QRP (low power) and mobile operator. I have spent
+ literally hundreds of hours installing my mobile station (IC-706 and
+ Screwdriver antenna, plus more grounding straps than I can remember)
+ in my 1995 Neon.

- - This has led to my love of QRP (low power) operation. Working from the
- - eastern U.S. into Germany at 100 Watts is pretty neat - but to do so
- - on 1/2 Watt? A flashlight uses more than that, and it's being seen
- - some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!
+ Most of the time I operate QRP CW mobile.

- - I also enjoy an occasional contest, although I am more relaxed about
- - operating than the annual "winners." I always operate on Field Day
- - with fervor, last year assisting the University of Maryland in making
- - 205 QSO's (most of them CW) at 4 Watts of output power into wire
- - antennas.
+ Why? It challenges my operating skills as much as possible, plus QRP
+ is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF

+ exposure still unknown, I don't feel like exposing myself to
+ high-power RF fields any more than necessary, and if 3 watts will do
+ the job, so be it, I'll emit it.

- - I greatly prefer CW over phone. I can frequently be found on 2m
- - repeaters during trips and the drive to and from work.
+ In addition, people are generally amazed when you mention that not
+ only are you running just 3 measly watts output power, and on top of
+ that you're doing it from your car as it's zipping down the Interstate
+ at 65 mph. They just can't believe it's possible that less power than
+ a nightlight is bouncing off the ionosphere and ground three times,
+ and is still able to be detected 10,000 miles away.

- - I have confirmation of contact with 138 countries and have earned my
- - WAS and WAC awards. I have been a Volunteer Examiner since age 18, and
- - a ham since age 15.
+ I'm here to tell them it is.

- - I get a great deal of joy from watching others learn something new,
- - and then embrace it as their own. Ham radio is a wonderful way to
- - become involved in public service and a great, technical, hands-on
- - hobby that can lead to careers and a lifetime of enjoyment. I find
- - great pleasure in making others aware of it.
+ I enjoy building kits, and consider myself to be a good builder.
+
+ I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as
+ hunting for DX.
+
+ I am active with both the Laurel (Maryland) and University of Maryland
+ Amateur Radio Clubs, and operate with both during public service
+ events. I have been the chief HF operator at University of Maryland
+ HF-related events (Field Day and Sweepstakes) for the past three
+ years.
+
+ As a Volunteer Examiner, I have conducted roughly 150 test sessions,
+ testing at minimum a thousand applicants.
+
+ I have recently given Novice/Technician license instruction, as well
+ as taught a 5 WPM code class. I have been told that I have a knack for
+ describing complex subjects in ways that make them far easier for
+ laypeople to understand.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

I have been licensed for almost 20 years and have seen quite a bit. I deal mostly with helping new hams get going on HF including helping with antenna projects, etc. I have taught novice classes in the past and continue to do so. I also have extensive experience with the VEC program including starting the Dunedin ARA VE team.

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations

of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and
sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with
hobby terms and expressions. A clear speaking voice and the ability to
read the written text of Amateur Radio books and describe the diagrams
and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new
volunteers, as well as a copy of the book to be read and cassette
master tapes. Readers will need a good-quality cassette tape recorder
and a quiet place to record. Some of the books we would ask readers to
tape would be ARRL license manuals, special interest Amateur Radio
books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace,
as long as there is a quiet place to read. It is a wonderful way to
share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio
examinations on-line. The written examinations for all five classes,
novice through extra, can be generated complete with figures, filled
in on-line, and then graded. The results are presented
question-by-question, and also graphically by subelement, so that
users can identify areas which require further study.

More advanced options include saving the results of each examination a
user takes on-line. These results can be used to monitor progress and
also as a basis for generating exams tailored to a user's needs,
ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of
the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to
you with the answers included at the end of the E-mail. These exams
lack the figures, so reference to a printed copy is advised! Simply
replace "novice" with any of the other exam names (technician,

general, advanced or extra) to get the other exams. To request
multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam
figures, and FCC Part 97 are also available. A comprehensive help page
exists to guide users through the facilities of the site. All
questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

* Packet and Digital Networking
* UNIX

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Our club offers CW training opportunities and we are working on
starting some theory classes but there are plenty of active Elmers in
our group despite our lack of organization to date. We also have VE

sessions and would be glad to help anyone in the area who is
interested in amateur radio.

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham-Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to

find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

USA

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the body of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through

publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100
callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly
into the QRZ! Callsign Database, where it will be published on both
CDROM and on the Internet. When you use this page, your E-mail address
is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the
server. There are no charges or listing fees, and it's free to all
radio amateurs. The procedure takes only a second, and you are only
asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is
now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can
begin operating as soon as your callsign shows up in the online
database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail
address above.

I have a page of Macintosh Shareware I have written:

http://www.best.com/~jluszcz/software.html

One of the programs I have written allows you to connect the Radio
Shack Digital Multimeter with PC Interface to your Macintosh Computer.
It is Apple Scriptable. The Radio Shack multi meter has a serial port
(RS-232).

It is called MacMultiMeter

>showed growth.
>MD

Sorry Mike, the numbers I posted reflected the net change over
the past 12 months (not just one month). For the record
here they are again and, in fact, only the EXTRA and No-Code
Tech saw growth. The Advanced, General and Coded Tech
all saw a net decrease. Additionally, the net increase in
total hams is only 7582 (not 30K as you state.

Thanks to the W5YI report, here are the latest statistics
for amateur licenses in the USA as of 12/1/97.

Total licensed hams: 719,341
This total is only 1.1% increased over last year at
the same time. The net increase is only 7582
over December 1, 1996.

Of the total, here's the breakdown by license class.

Extra: 75,694 an increase of 2176 which represents
an increase of 2.9%. The percent of all hams that
are Extra is now 10.5%, up from 10.3%.

Advanced: 112,482 a decrease of 1922 which represents
a decrease of 1.7%. The percent of all hams that
are Advanced is now 15.6%, down from 16.1%.

General: 124,415 a decrease of 2299 which represents
a decrease of 1.8%. The percent of all hams that
are General is now 17.3%, down from 17.8%.

Tech Plus: 147,559 a decrease of 782 which represents
a decrease of 0.5%. The percent of all hams that
are Tech Plus is now 20.5%, down from 20.8%.

Tech: 179,226 an increase of 18,636 which represents
a increase of 10.4%. The percent of all hams that
are Techs is now 24.9%, up from 22.6%.

Novice: 79,965 a decrease of 7582 which represents
a decrease of 10.3%. The percent of all hams that
are Novice is now 11.1%, down from 12.4%.

Some thoughts:
With the sole exception of the Extra class, all other
license classes with HF access have decreased.
Indeed, it can be seen that the total of all
hams with HF access has DECREASED by 12,054
over the last year. In the same time, the Tech
license (nocode) has increased by 18,636. This has
caused an over 2% shift in coded vs non-code hams.
Indeed, today, 1 in every 4 hams is a nocode ham.

The percent of hams with 13wpm or 20 wpm code
qualifications (Extra+Advanced+General)
is down to 43.5% from 44.3%.

Ultimately, these are not growth numbers that
bode well for amateur radio in the USA.

Hmmm, "$500 or less" let me see here, the CHEAPEST monitor you could get would be about $180-200. Then if I go with a Pentium based cpu that is NOT one the worthless 60-90Mhz bugs that was throw out for the public to have to try and get a configuration in, and THEN I have to have a modem. I think that the modem is the cheapest part at the least about $40 for a worthless brand that will NEVER get a good connect at the true high speed it was sold at. Then you have to have Hard drive(s), at the least a floppy, oh you forgot RAM and then you MIGHT get on the Net. That is if you want to support AOL or some other crap that is trying to "keep" up with the NEW digital lines. Oh do you want digital InterNET then we need to get a REAL modem first that would be $200+ EASY alone. Oh but wait I guess you mean go to a garage sale and buy some piece of crap that no one else wants. Then pay all these people monthly to get access (AS LONG as the LINES are NOT BUSY!) No thanks I would rather talk to people via. radio that will be able to TALK back not hide behind their keyboard and spit out random garbage that ends in no meaning. Oh yeah and eventually you will want a faster cpu that changes the price again, so please show me a REAL INTERNET computer for $500 or LESS! There is not one... not worth having IMO

It depends on how one interprets the rules. Part 97 does not specify
testing proceedures. 97.503 as you say does require the applicant be able
to copy by ear code at a given speed, but the means of determining that
is left strictly up to the examining VE's and their VEC. The rules
provide no specific proceedure for substituting a sending test in lieu of
a receiving test but on the other hand the rules do not enjoin such
substitutions. Some VEC's may have policies in this regards, but
ultimately it is up to the examining VE's in the field to determine a
candidate's qualifications with respect to the code elements.

REPLY...

I doubt many experts in the RF engineering field would waste their time learning Morse code.

The only possible place they could use it would be in the Amateur radio bands. All the other radio services (military, government, public service, and business) have all virtually given up on Morse code as a means of communications.

Heck, for that matter, I doubt many engineers at Yeasu, Icom, or Kenwood, Japan Radio, or the other Amateur radio companies, waste time learning code (or even get a ham radio license) today. It is certainly not necessary for their career, even when designing Amateur radios.

TAX IT!
Hell no, he'll sell it first!
According to our current congressional thinking:
Selling Radio Spectrum = Less National Debt

Most of us know how that game is played and that it really hasn't made
a noticeable bite in the debt; but tell that to Joe Average who thinks
every herringbone pattern on his $99 color tv is from the ham down the
street. I can see it now in the newspapaper, "Congress collects money
to balance national debt while eliminating interference on your tv!"

mini-rant complete.

Some time ago I adapted my logging program, in conjunction with GI4WRJ, to be used with HAL a "screen talker". Robin GI4WRJ is a blind op and his use of the program amazed me. He had to write an environment for HAL to read the logger which is not a little difficult. As the hardware and HAL are very expensive I wonder if later developments have made things less expensive for the blind ham. I have been thinking of making a talking version of my program using the SoundBlaster as a more economic answer.
So far I have not been able to locate any info on generating speech with a sound card but I am sure I will. Would this be a worthwhile exercise? I would be interested in constructive comment. You can find my website at http://www.kay-dee.demon.co.uk. for free and budget software.

Lumpy writes:
When I was a newly licensed tech, I got plenty of help from both the established amateur community and the ARRL. Classes, VE testing etc are all from the established amateur community. These are all gratis by the VE testers and class instructors. There is rarely a new tech who does not utilize VE testing.

When i first 'tech'd' the ARRL sent me several free publications, software etc. As well as maintains an absolutely free website where new tech's can get tons of information. All of this without even joining.

I'm not sure what you mean by damn little encouragement.???

> #define NUL '\0'
> #define FREQ 900U /* unsigned frequency (in Hertz) */
> #define TU 80U /* unsigned time_unit (in ◆seconds) */

What are "◆seconds"? My newsreader shows an "ae" character before
"seconds". I assume you mean "milliseconds", such that 80 ms would be
eight hundredths of a second. And BTW that "◆" character can't be
used in portable C source, even within a comment, although I know of
no implementation that notices illegal characters in comments.

>
> void dot(void) { sound(FREQ); delay(TU); nosound(); }
>
> void dash(void) { sound(FREQ); delay(3*TU); nosound(); }

You do not have adequate definitions for the sound(), delay(), and
nosound() functions. Presumably you expected their declaration to
come from dos.h. I'll just write replacements.

True portable time delays are impossible (as we shall see) but I think
this is about the best that can be done. Error checking is omitted;
clock() may return (clock_t)-1 to indicate no working clock is
available, but if you don't have a working clock() then nothing can be
done, and in the most likely implementations, (clock_t)-1 could be an
expected return value (where clock_t is unsigned long, the underlying
timer contains ULONG_MAX and is about to overflow). Similarly,
avoiding overflow from (clock() - start) can't be done either, since
the standard only defines clock_t as some arithmetic type. The
greatest likelyhood is that clock_t is unsigned and the subtract will
properly wrap around when the clock() counter overflows. Also,

nothing can be done about timing precision, but usually CLOCKS_PER_SEC
is at least 10 and will suffice.

So my delay() routine might not work, but it's written in the
standard's own terms, and it probably *will* work.

```
#include <time.h>

void delay(unsigned int tu)
{
long ticks;
clock_t start;

/* Convert tu in milliseconds to clock ticks */
ticks = CLOCKS_PER_SEC * tu / 1000;
if(ticks == 0) /* If it's too brief then delay at least one tick */
ticks = 1;

start = clock();
while(clock() - start < ticks)
;
}
```

sound()? The only thing the standard says is that the character '\a'
represents an alarm character which may (or may not) produce an
audible sound, so that's what I'll use. If it doesn't work then
nothing can be done.

```
void dot(void) { putchar('\a'); fflush(stdout); delay(TU); }
void dash(void) { putchar('\a'); fflush(stdout); delay(TU*3); }

>
> void delim(unsigned int n)
> { /* space between the signals forming the same letter = 1 TU
> space between two letters = 3 TU's
> space between two words = 7 TU's */
> delay(n*TU);
> }
>
> void main(void)
```

Everybody knows this one.

```
int main(void)

> {
> int c;
> size_t i, j;
> char user_input[81];
> char *ptrs[256];
>
> memset(ptrs, '\x00', 256 * sizeof(char *));
```

Do not initialize pointers using memset(, 0,) and expect them to be
NULL. It is highly likely that they will be, and on DOS and Windows
platforms they *must* be, but the standard does not define any bit
patterns in pointers, and specifically "all-bits-zero" need not equal
(char*)0.

```
for(i = 0; i < 256; i++)
ptrs[i] = NULL;
```

```
> ptrs['A'] = ".-"; ptrs['N'] = "-."; ptrs['1'] = ".----";
> ptrs['B'] = "-..."; ptrs['O'] = "---"; ptrs['2'] = "..---";
> ptrs['C'] = "-.-."; ptrs['P'] = ".--."; ptrs['3'] = "...--";
> ptrs['D'] = "-.."; ptrs['Q'] = "--.-"; ptrs['4'] = "....-";
> ptrs['E'] = "."; ptrs['R'] = ".-."; ptrs['5'] = ".....";
> ptrs['F'] = "..-."; ptrs['S'] = "..."; ptrs['5'] = ".....";
> ptrs['G'] = "--."; ptrs['T'] = "-"; ptrs['6'] = "-....";
> ptrs['H'] = "...."; ptrs['U'] = "..-"; ptrs['7'] = "--...";
> ptrs['I'] = ".."; ptrs['V'] = "...-"; ptrs['8'] = "---..";
> ptrs['J'] = ".---"; ptrs['W'] = ".--"; ptrs['9'] = "----.";
> ptrs['K'] = "-.-"; ptrs['X'] = "-..-"; ptrs['0'] = "-----";
> ptrs['L'] = ".-.."; ptrs['Y'] = "-.--";
> ptrs['M'] = "--"; ptrs['Z'] = "--..";
> ptrs['+'] = ".-.-."; ptrs['-'] = "-....-"; ptrs['='] = "-...-";
> ptrs['/'] = "-..-."; ptrs['?'] = "..--.."; ptrs['\''] = ".----.";
> ptrs['.'] = ".-.-.-"; ptrs[','] = "--..--"; ptrs[':'] = "---...";
>
> printf("Enter some data followed by EOF (i.e. Ctrl+Z):\n");
> for (i = 0; (c = getchar()) != EOF; i++)
> { user_input[i] = c; }
```

UNSAFE! You do not limit input to the length of the user_input
array! 80 characters is *likely* to be exceeded.

```
fflush(stdout);
i = fread(user_input, 1, sizeof(user_input)-1, stdin);
if(i < 0) /* Check for input error */
return 0;
```

(Without that loop, the variable "int c" is unused and the
declaration can be omitted.)

```
> user_input[i] = NUL;
>
> for (i = 0; i < strlen(user_input); i++)
> { char morse[] = {'\0', '\0', '\0', '\0', '\0', '\0', '\0'};
>
> if ( isalnum(user_input[i]) || user_input[i] == '+'

> case '.': dot(); delim(1);
> }
> }
> delim(2); /* delim(1 + 2) */
> }
> }
>
> }
```

With these changes it compiles and runs on my system (Windows NT, MSVC 4.2, language extensions disabled) and produces plausible results.

What did I miss?

Hello
Can some tell me where I can get a copy of the Radio Am.Handbook
local (Omaha,NE) The bookstores have alot of copys of (Stuff for
dummys)
and (how to make money off chicken soup), but I got a funny look when I
asked for a copy of the current handbook.
Thank you

Once again, CrACKed is at least bent, if not badly broken. I suppose
that we should accept indecipherable postings of a single individual in
crACKed, broken English as more than welcome. No one has slammed him
into the turf yet, just hinted that he make a better attempt to be
understandable. Other non-English posters here are able to do so. If he
cannot, he should at least understand that he needs to upgrade his
verbal English skills. Since it's obvious he doesn't understand this on
his own, it becomes necessary to inform him. And you see this as
anologous to making ham radio operators become minimally proficient in
one of the main communications modes that ham radio operators use. Yeh,
you're cracked alright. Why don't you join Amor Powers for some callsign
comparison?

I would like to know how you are computing that figure, since microwave ovens use pulse modulation. At what point are you measuring that "radiation", i.e., how close or how far from the oven. Is this figure for a new oven or one that has seen hard, commercial service. Are you using a DC average or a formula based on duty-cycle? For that matter, are you giving factual information or are you merely repeating something you read somewhere?

I just love people who give these sweeping "facts" without any technical basis.

I would also check out SmartLog, which has some very interesting features, including the ability to import almost any of your previous log files or contest program files. It's also less expensive than most, even though it does things the others won't do.

Their web site is http://www.lumisoft.com

It's a Windows program instead of a DOS program running under Windows as many of them are. The best thing to do is check them all out and compare 'em in terms of what you get for the money, IMO

Body handling: HTML body converted to readable text

Hello,
I thought I might place a comment here.
The term "POLICING" would imply authority to follow through with an action to correct a situation. We as amateur radio operators are supposed to be a self-policing group. The FCC is "supposed" to enforce regulations that would include enforcement of Part 97 violations.
I've been an amateur only a couple years. What I have seen since becoming one are that most amateurs are a laid back and somewhat lazy lot. They are "VERY" quick to complain and bad mouth someone, but very slow to "police" infractions of the regulations that guide us.
I speak mostly from what I have expirienced from local 2 meter repeaters. In traveling around the country and talking to other hams, I figured out it's not just a local problem.
Now if most local amateurs can't or won't do anything to effectively locate or stop a local ham that violates the regulations. How exactly does one go about getting a HF amateur that may be 20 miles or 2000 miles away to stop being disruptive. Most of the junk I hear on HF exists because a callsign is being used as a faceless "Handle" to allow a person to say whatever they wish.
Locally I think clubs and amateurs should do more to control violations, and be given a legal way to do just that, without having to beg the FCC, ARRL, a senator, or write the spouse to the president.
On HF violations, the FCC and ARRL should be lambasted for their lack of concern, effort, or especially enforcement of Part 97 rules.
Could some knowledgable individual please tell me how we amateurs can effectively "SELF POLICE" ourselves, when the governing body can't or won't enforce their already existing regulations nor give us the effective power to do it ourselves. The ARRL is powerless and refuses to do anything and the FCC either has no funds or inclination to do anything except to the worst offendors or when it would make them able to recoup some $$$.
Until amateurs have the effective power to enforce regulations through some governing power without jumping through 43 different hoops and 10 years of regulations, the concept of our being "SELF POLICING" is an absolute joke.
My 2 cents....

Roger Sellers KB9LBU

> XXX wrote: "Did these people really *deserve* to get saved when
> they used such an outdated mode to call for help?"

Sad.... My heart goes out to the crew of the M/V OAK/C6MX8 that had
to recently experience that cold day in the water, and to all those
past that have gone down to the sea in ships.

> It almost brings tears to my eyes to believe that someone could pen
> such cold-hearted words. XXX wrote something similar some time
> ago in regard to another ship in distress that had called for help
> via CW on 500 kc (occured 1-2 years ago).

I concur, on the sensitivity of this issue.

It feel it was probably not intended in really being cold-hearted,
Jeff, but that folks have gotten a little testy over the code issues.
I will suggest that we all can be a little more easy on the issues.

That was probably the M/V Salvador Allende/UWAG sinking. All hands
save two were lost, and it was well documented on CNN and was a long
night on 500khz for those that happened to listen. For those that
have never heard the cold chill of an autoalarm firing, for real, and
the subsequent distress call, one might be a little more reverent
for those who have given their all, or been put by fate into that
peril of the sea. When one hears that sound, knowing exactly what
and why it is, it makes one take a deep breath and ``crawl down deep
into the tin cans'' as and old R/O once told me. I concur.

Jeff, here, has heard it and knows exactly what I mean.
I am sure there are past R/Os aboard with us that also have, too.
I have heard it, and it sends cold chills even today, when I
replay the tapes, occasionally for those with an interest.

> It's shameful that these two radio operators stain the exceptional
> history radiomen have displayed in their caring and concern for
> their fellow humans in distress at sea.

I would concur on this particular point, and be of the opinion that
we should be a little less heated on the code issues on the internet.

> Jeff KH2PZ/7 (former US Coast Guard radioman)

I sense it was done only in a joking mode, but it is still a
sensitive issue amongst some and not to be taken too lightly.
Let us all relax a little on the code issues folks, OK. Even today,

some seafarers lives still depend upon it, even though many on the internet unknowingly make light of it. It is not unusual for there to be some 50 major vessels lost in any given year. Out of that, many are still CW radiotelegraphy equipped, per the Safety of Life at Sea conventions, and appliccable ITU/IMO and national regulations. If they, for any reason, need to use the distress call on CW radiotelegraphy, support them in any way that you can, and wish them safe passage.

This is Harry Miller KB6CGG. A friend of mine N6KXS asked me to list this for him. He has a like new Noise Reduction Unit, Model #NRI-10 made by JPS Communications, Inc. This unit cost almost $400 new. They are a very good unit. It is like new. He is retiring from ham radio and would like to dispose of this unit. He has the manual for it. Price $135 plus UPS. If interested, you can contact me at hmiller@fix.net.

Tnx es 73, Harry Miller KB6CGG

That is one reason to be very wary of the GMDSS. It has not really worked well under fire, from everything I have been able to find out. It will be touch and go after Feb 01, 1999, until it makes or breaks. I am hoping it will not take another Titanic affair to settle the issue.

> I've never heard of anyone ignoring an SOS on 500KHz, and the
> 15-18/45-48 minute arcs are still emblazoned in red on my shack
> clock, habit of 21 years of sea duty.

The mark of a real CW radiotelegraph station clock.....

Never, never, never would an R/O ignore that. He knows his own arse also may make use of it, someday. That is why the that old Morse CW system works..... everyone is listening. I'll scratch your back, today, and someday you can scratch mine..... it really does work, or it did.... Now, few are listening.....

When I am in the shack, of an evening, I still roll the dial to 500 when all is quiet elsewhere, or I am not in an active QSO. Although there is not a great deal going on there anymore, one can still hear the TFC LISTS and the WX bulletins go by occasionally, and a few 3rd world calls to shore stations in the night......but you have to listen rather carefully, as it is almost gone......

Not necessarily. It is still the bottom line mode of communication,
universally, and on ONLY that merit deserves better attention by the
manufacturers. But, so what......

Well, CW is usable in any spectrum, last time I checked.

> For these companies, the Amateur radio market is only a tiny part of
> their business. And because it is such a small part of their business,
> it is unlikely that they would go out of their way to hire engineers

Agreed. But, the principles of good CW were laid down decades ago.
It merely seems they have forgotten it, or made executive decisions
in lieu of it or such.

> But, in spite of that, you still have to give the "Kenicoyasawhooie"
> companies some credit. They are sticking with ham radio, even if it is

I do give them credit. I use one as a freqmetermonitor and occasional
vfo. In those functions it is great. But, on CW, well, nil good.

> By the way, I like Carl R. Stevenson's "YaesIcoWood" better than
> "Kenicoyasawhooie." Although "Kenicoyasawhooie" is not bad.

Both get the generic meaning across.....

>with the same feeling will also choose not to participate.

Well, Baldy, that might be what you meant, but it isn't what you said.
You specifically said "...should be BANNED..." (emphasis mine).

Now, I don't care for RTTY, satellite, EME, packet, PACTOR, and a host
of other modes, nor do I particularly care for contesting (almost never
operate one) or paper-chasing (don't have a piece of paper in my shack other
than my license and world prefix map), but I would *never* suggest that
we ban *any* of these activities.

>I always thought
>there was more to ham radio than "CQ, Contest, CQ, Contest, CQ Feld Day, (your
>club call), copy Seven Alpha Orange, Seven Alpha Orange, Thank you, CQ...."
>I participated in this pointless excercise for 4 years, coming to the site
>after work and then working the field day station for 12 hours.

Sounds like you have a boring field day. I get to my field-day site at
10am, help raise the antennas, set up the HF and VHF stations, and then
break out the bar-b-que and start cooking lunch. Then I operate for a
couple of hours, cook supper, and then sit around in a lawnchair most of
the evening kicking back a few frosty ones, BSing with the fellas.
Field day is a social activity, and we treat it as such.

>Did it ever occur to you to mention that you snipped something out to change
>what I said? No, you would rather misquote me to try to prove your point!!
>I said CW is a great space-saver, if you or anybody else is inclined to use
>it, that's great!

I cut out the irrelevant part of your post (makes sense, rather than waste
bandwidth quoting your entire message.) Whether or not CW is a great space
saver is irrelevant to your argument, which is certain activities you
don't like (or are obsolete) should be banned.

>Using packet, I could send you the complete works of Shakespeare
>in a couple hours, 100% error free, what you get will be an exact copy of what
>I have....Try that with CW, how long will it take?

I've never tried, but in the amount of time it will take you to send me
the complete works of Shakespeare over packet, I can drive to Boston, buy
it at a bookstore, drive home, and be half-way finished reading my new book.

you'll never know. You have answered your own question. Since you never caught on to the magic that is "radio" there is no point in you worrying about it. When your phone line breaks you can read a software manual. So, don't sweat it.

That would get you a big fat "F" in debate class. What you tried was
argument by analogy. The subject was lives being saved by CW. Argu the merits
of that case not try to "deflect" it with spurious comments about indians.

> little if any problems,.....

I have had my 202 for about 3 months and then the hi/lo power switch started to get touchy! I hooked the rig up to a power meter to test the output between low and high power. There was only about a 1 - 1 1/2 watt diff between high and low. My reflected power vs. forward power was also quite high. I took the radio in last week because the switch finally gave way. I hardly ever took it off of high power, except to hook it up to one of their 30 watt amps. On that note, I think the power amp is starting to go (only 1 month old). I get a lot of AC hum and I am using a regulated power supply.

I feel that in general most of their ham radios and components are cheaply made!

But, I LOVE my pro-62 scanner!

It's interesting that ham radio has nothing to do with the U.S. Coast Guard or
the U.S. militiary. Those advocating getting rid of code constantly use the
example that the aforementioned don't use CW any more, so hams shouldn't
have to use it either.....

But then again, this NG isn't ham radio. It's a forum for argument.

Well, no Greg, in your case, I think you are being punished for NOT exercising your abilities, if you want to consider it 'punishment'. You might want to check the Texas Constitution, and see if the use of HF is mentioned there, you never know.

In the proposal for licensing fees that Carl has submitted to the FCC, I believe it says that the fee for Texas is $500 a year. Everything is bigger in Texas, you know......

Dick, your service is appreciated. My Novice instructors, Bill True, Steve Stock, and George X will forever have my respect.
Do you ever feel like you're giving away amateur radio with those written exams? I once sent a searing message to the ARRL VE about the question pool. They sent back a thoughtful answer, but I still feel that the pools should be increased about 5 fold. All repetitive questions should be removed as each question should be unique.
As far as my Elmering goes, I've only taught a couple of classes (mostly adults) and helped set up only 2 shacks, but then again I'm a newcomer myself. I guess all of my Field Day efforts were probably self serving because I just LOVE field day. I've taken a few turns as a club officer here and there. I've helped out at a few BSA JOTAs in the US and on Guam. I have introduced amateur radio to a church youth group. I hope that I left a favorable impression with them.
However, as far a being a VE, the ARRL/FCC won't let me "proctor" 1/3rd of an amateur exam. But if you want to take the commercial exam, let me know. I can do that all by myself. Which brings up a very interesting point.
I will proudly stand up and take my turn once the ARRL and FCC recognize that it is integrity that matters, not code speed. Pushing the "play" button on a boombox, and checking the answer key against test responses is probably something that I could handle with the right amount of training. I used to provide Amer. Red Cross 1st Aid and adult CPR training classes before I started going to night school. I've signed a load of wallet CPR cards. No, CPR wasn't amateur radio, but I think you can probably see that I'm not a new duffer resting on my CW accomplishments.
I would gladly join your VE team it if it were legal for me to do so, and if you would have me. Thanks for asking.

Wire telegraph operators copied the spaces between the clicks.
Long space=dash, short space=dot. If you thing beeping is hard, try
that.

We did that. Our repeater is called HF. It's shut off. You can't use it.

Reading comprehension problem there, CB Ramboozle. Go back and reread the orignal discussion. Plus a bit of an attitude problem too, seems like. Which is primarily why you find yourself in the group you find yourself in. Never did like the rules much, huh Ramboozle ?

>>Queston: If the 'old girl' was to die tommorrow, how will that make you
>>feel,
>>and why ?

>and see...

Exactly the answer I expected, Rambone. Thank you for verifying the fact that you are here for the same purpose as Squiggy, to do everything you can to help throw the ice cream on the floor. Not enuff people in the CB newsgroup that know how to type, so you wound up over here right ? No DX on the local VHF repeater ?

We all understand your disease. Wanna be. Couldn't be. Not happy. It hurts. We know. Hopefully, the ARRL will start a Psychological Rehabilitation Fund for people like you and Sqiggy some day, as you have been so devistated by your inability to participate.

Tear up your no code tech license, of which you are so ashamed that you haven't even bothered to tell us about, NOW - avoid the rush later.

And when the ham bands go away, what happens if all us Hambos decide to slide on down to your band and dust your britches Ramboozle ? Remeber, we are not running two TV tube 100 watt 'boosters' like you are. No 'Big Sticks' on our towers. Guess then you'll have to start bootlegging on 20 meters, right ?

Hi Ryan,

The ARRL would have used the other $2.00 to lobby in Washington
D.C. to support amateur radio. Hopefully, when you get all done studying and
pass the test, there will still be some ham bands for you to use. If not, take
it up with www.ccrane.com . In life, you only get what you pay for.

Good luck with your studies.

I see you're in portugal so you probably want web access. Try the
Motorola semiconductors site at:

http://motserv.indirect.com/

They have most of their data in PDF format so you need to download the
acrobat reader if you don't have it.

You scare me Dan..... I would not want to ship out with you anywhere.
I would assume you were joking a bit about this. But, for the sake of
discussion.....and not joking.....

The Oak was an older ship, on a 3rd world registry flag. As such, its
owners could get by with only the minimally mandated requirements because
it was cheap to do. Someone might be able to look up the date of the Oak
from one of the ITU lists of ship radio stations and tell us what was on
it, in reality. POS 53N 25W at 750 miles west of Ireland is not really all
that far from where the Titanic went down --- out of vhf range of anywhere.
Although I can't say for sure what the Oak had on board, if it was using
a CW operator, it probably had sitor, voice, and CW. It is possible that
it had GMDSS gear aboard, but not likely anything more than EPIRBS which
fire after the ship sinks or can be manually fired. EPIRBS are one-way
distress beacons used as a last resort only. It is possible that some of
the sitor gear was down. I would not expect the ship to have had much in
the way of satcom gear, especially if it was a Bahamanian registry vessel
in a flag of convenience. The R/O could have routed a distress call through
one of the 4/8/12/16 mhz shore stations, but that would take time and in
a sinking ship, time is of the essence. The known problems people have had
with satcom routing of distress messages may have been a problem. If all
else was failing, then a 500khz distress call via CW was appropriate.
One thing about the GMDSS system is that RCC folks have to find a ship to
get back with you. That may or may not happen easily, and is a concern.
On a CW distress call on 500khz, all ships in the vicinity (within a
practical working range of 500-1000 nm) hear you immediately, and can
respond within a reasonable range. Bridge to bridge vhf fm is only

good out to 30-40 miles. It was a wise move to opt for something with a range of 500 miles over 30-40 miles since more ships with a potential for rescue would have been within a 500 mile range compared to a 40 mile range. At 750 miles out, the Oak was apparently within flight range of somewhere for air/sea rescue, though, and that method of rescue was used from what I saw on CNN, after they had abandoned ship to the life boats. They apparently jumped into the sea by pairs and were rescued by helicopter.

It is somewhat disconcerting to think that after Feb 01, 1999, when the GMDSS is officially in place, noone will be listening, anyway. It all depends upon a system of intercoordinated international stations and satcoms that is not quite yet proven under trial by fire to work, even though it is highly hyped as the miracle mode in the satcomm trade rags. CW was crude, old, but known to work well. It turns out to be not as cheap as satcomms and automatons, and the bottom line rather than people is what seems to count. Scary....but on the high seas, it seems to have always been that way.

> Anti-coders will need to pretend that this just didn't happen.

Anti-coders don't have a clue, anyway.

> KR4AJ

The owners of the ship chose to use a flag of convenience 3rd world
registry just to get AWAY from having to update the ship to higher
standards. That is very commonly done.

It's interesting that ham radio has nothing to do with commercial shipping or aircraft, and others in this NG are using commercial shipping distress as a reason for keeping code....Those advocating keeping code by giving examples of ships at sea don't seem to be telling stories about a ham who picked up a distress call and "saved the day", the stories are all about naval monitoring stations. In this day of sensationalized news, do you think it would pass by quietly if a ship at sea were stranded and there was no response from any government station? And a ham operator who just happened to be "passing by" picked up the signal and saved them? That would be on the 4:00, 5:00, 6:00, 10:00 and 11:00 news for a week!!! Government negligence almost kills 100's aboard a luxury cruise ship! A lone amateur radio operator is the hero that saved the day when the Navy failed their duty!! Navy plot to kill hundereds is stopped by ham operator!!

YES False alarms are failures.

Do you remember the story of the boy who cried wolf?

Or maybe you were in a dorm during finals week with all the false alarms
being set.

This is probably not a safe assumption with a flag of convenience
registry vessel. At best, it probably only had the GMDSS mandated
EPIRBS aboard, but I could be entirely wrong. I would not have
expected it to have been GMDSS compliant other than that, especially
if it still carried an R/O.

> The basic concept of GMDSS is that Search and Rescue (SAR) authorities

> to send alerts, identify the vessel and it's location, and for voice
> communications.

It depends upon the ship making a GMDSS satcom distress alert,
the alert being properly electronically routed, the RCC (Rescue
Coordination Center) properly acting on the distress call, and
then the database of vessels and vessel locations being currently
correct. There are no voice communications involved exept if you
are in the polar shadows where satcomms are ineffective (although
I have heard that some additional satellites may cure this). In
the polar shadows HF SSB is used as the failsafe mode. VHF FM is
used locally at the distress area. The sending of the distress alert
amounts to pressing a big red button on the console (a source of
many false alerts to date).

> Unfortunately, it is plagued with problems, both in reliability and in

> for generations.

A wise decision on the R/Os part. I would not have thought the master
would have made that decision as to mode, although I may be mistaken.

It seems that even the pursers have been GMDSS licensed it is said.
That would be scary. In the heat of a distress emergency, the mates
would have much other to do than poke at electronic equipment that
does not work as it should. The trade rags on the GMDSS issues seem
to sidestep the many problems as if they were trivial. Alas, they are
not, in reality, and they remain unproven under fire.

> At a GMDSS Conference held in Plymouth, UK, a British ships Master,

I had not heard that one. Is that due to the routing problems once
distress messages are in the system, or just the equipment problems?

> Capt Cooper was the most outspoken critic of GMDSS. But most other

Didn't say it because that's not what I ment.

>I wonder what would happen to amateur radio if everyone was able to "ban"
>the aspects of the hobby they personally don't happen to like?

We can, we can choose not to participate, and express why not. Other people with the same feeling will also choose not to participate. I always thought there was more to ham radio than "CQ, Contest, CQ, Contest, CQ Feld Day, (your club call), copy Seven Alpha Orange, Seven Alpha Orange, Thank you, CQ...."
I participated in this pointless excercise for 4 years, coming to the site after work and then working the field day station for 12 hours. All it did was show that when everybody was transmitting at once, nobody could communicate anything more than the minimun exchange, and sometimes even that was difficult. The CW operators were not doing much better, even the ex-navy radioman yanked the headphones off his head more than once!

Did it ever occur to you to mention that you snipped something out to change what I said? No, you would rather misquote me to try to prove your point!!
I said CW is a great space-saver, if you or anybody else is inclined to use

it, that's great! It don't waste spectrum like voice. I just said that compared to digital modes (Packet, Amtor, etc) it's painfully slow and inefficient. Using packet, I could send you the complete works of Shakespear in a couple hours, 100% error free, what you get will be an exact copy of what I have....Try that with CW, how long will it take?

In the summer of 1962 I had just passed my novice test and was waiting for the weeks to pass until I got my license. I was in the process of building a transmitter and had put up an 14-avq multiband vertical on the roof of the house.

After the antenna had been up about a week the lady that lived down the block came over and complained to my parents that my ham radio was causing interference to her television and telephones. She said she could here me talking and that I was making rude comments about her. She also just knew that her house was going to get hit by lightening because of my antenna. All of this before I even had a transmitter.

> of spectrum and time,

One person's opinion, though contesting and "paper chasing" are, IMO, simply vehicles for exercising the "art."

>2) CW is a waste of spectrum

Your words, Mr. MD, NOT those of Baldy: Another blatantly glaring attempt by the master obfuscator and twister, Mr. MD, to confuse facts and meanings, distorting the simple, honest attempts of innocent parties to convey their own opinions. Shame!

>
>thus
>
>3) CW should be banned too.

Your assertion, Mr. MD, based on your incorrect obfuscatory reading of Baldy's text. IMO, what others have said in the past bears a certain amount of validity, that being your considering the possibility of improving your reading comprehension by whatever means are at your disposal.

>
>(of course, the poster wouldn't come right out and say that, because it would
>cause too much of an uproar.)

And, of course, being the ever "helpful" obfuscator, Mr. MD "said that" for him. With friends like that, who needs ....!

>
>I wonder what would happen to amateur radio if everyone was able to "ban"
>the aspects of the hobby they personally don't happen to like?

Well, for one thing, Carl would probably say something to the effect that at least Mr. MD wouldn't be there to _____ (fill in the blank with your favorite Carl-response). =0)

>
>MD
>--
>-- Ted Kennedy has killed more people with his car than I have
>-- with my guns.

Michelle,
I'm only an electronics hobbyist, so I may ask stupid Questions. I'm at
a loss why the RF generated by a microwave oven would even be
"modulated". Could you explain further?, What information is being
carried by a modulated microwave oven?. I always understood RF signals
are modulated because of the fact that a pure continuous AC signal
cannot convey information. Thanks

Sorry to hear about the problem, but I(gave up being a VE for just those reasons. I knew of corrupt VE's in my area and called the league. Basically they don't give a damn!!

I also know of corrupt W5YI VE's. So the hell with the VE program.

I took my 20 WPM code at the FCC office in NYC.

Congrats on the re-test I hope they re-test some of the extra class VE's in my area. NO-CODE extras are scum!

What's more useless?

CBRrambo's post by far.

After all, there is always a chance that the HF rig will inspire it's owner to learn CW and advance.

There really isn't much hope for CBRambo, the teeny-bopper internet troll using mommy's AOL account.

Those monitoring stations you speak of would have been U.S. Coast Guard,
not Navy. U.S. Navy ships at sea used to guard 500 KHZ the same as any
other ship at sea. The mission of the Navy is not/was not to save other
ships. As a matter of fact, a Navy Radioman who answered an SOS before
notifying the Captain and being told to answer could have found himself
in deep Kim Chi.

Having said that, and having copied an SOS or two during my Navy years
and/or being on a ship when another operator copied one, I know of no
instance when a Navy ship did not attempt to go to the aid of another
ship that was in distress.

Cutie Boy, aka Slime, aka Troublemaker, aka M@s@ said:

> In April, 1961, Japan made a no-code license.

> No code license allowed you to use 21 MHz and 28 MHz.
> All the other amateur bands required to have morse.

And what a sorry mess that turned into!

Operator licenses are good for life and never expire.

(Station licenses are good only for 5 years and must be renewed.)

In order to obtain a station licensee, the applicant is required
to specify the equipment he will use (it must be a rig certified
by MPT, the JA equivalent of our FCC), and also list his operating
habits (bands, modulation, power). This information becomes part of
the station license.

If any of this changes (new rig, modification of rig, etc.) the license
must be modified to reflect the change.

If the rig must be government certified, and if I must notify the
government of a new radio, or modifications to my current radio, I will
not be very likely to experiment. Mainly, all I can do is yak! This is
ham radio?

Because operator licenses never expire, there is a current total
of 2.8 million operators in Japan.

Of this large number, 92% of the operators hold only an entry class
license, are limited to 10W HF, are prohibited from some modes,
and are denied permission to operate on 17, 20, or 30 meters.

LESS than a HALF OF ONE PERCENT of the operators in Japan have full
HF privileges. In other words, only 1 of every 200 JA amateur licensees
since 1961 has full HF priveleges! 99.5% do not.

LESS than THREE PERCENT of JA amateurs are allowed to operate on 20
and 30 meters. 97% are not allowed.

This very restrictive situation does not appear to be a model we
would like to emulate in the US. It may be fine for JA, but M@s@
should not criticize US laws as too stringent, when his own country
is MUCH more restrictive in granting full amateur operating privilege.

Because the computer is an unintelligent moron. A good chops is a real
people-person. I would much rather talk to the chops than the computer.

> Why use a keyboard? I don't get it. Are they trying to impress other
> folks on the air, or just get access to the CW frequencies?

You raise a very interesting point......

Although I am not what you would consider a cracker jack op on CW, I can
usually hold my own. I have occasionally used keyboards, and even written
some of my own programs to properly send the full ITM Morse code set (many
commercial keyboards and programs don't, a few do already, and none are what
I would consider any good except as playtoys).

When it comes right down to it, I always seem to fall back to the use of
a hand key of some sort (straight key, bug, keyer) and prefer operators
that use same over keyboards, simply because it keeps the/some character
of the sending operator in the exchange. I can almost always spot an
op I know even on a keyer, when the code is hand sent, and I know it is
Joe/Bill/Dale/Neal/whomever, merely by the sound of or the inflection of
the ``musick''. Keyboards get extremely monotonous in a hurry. They
are fast, if that is what you are into, but few are the operators that
run a consistent 50wpm. A number run 35-40 with keyers and bugs.
A great number run 20-25 on a straight sending irons or keyers or bugs.

Many of the ``computer'' keyboard things allow you to type in text
and buffer it an then send it. What for. I would much prefer a keyboard
that QSK's on the fly instead. Stacking up a 200 word text in the buffer
may be good for going and getting a cup of mud on the sly, but not much
else. Merely tieing up the ``line'' that long would not be the mark
of a good operator, either, unless he WAS saying something important
or worth hearing.

I also wonder how good the computers do with anything like QRM/QRN/
character to the sending, etc. Most I have seen fall far short under
fire. A good op can usually read well under the computer and have time
for coffee, and some chit/chat on the side. In clear signal, you can

just turn on the computer and let it log.... but geesh, how monotonous. Only the no-coders would do that, or maybe some contesters bent on upping their numbers. Nil fun there..... in my book.

I am not really impressed by keyboarders that run 50wpm all the time, and never seem to have much to say. It is fun to read the fellows that can spin a yarn or two worth hearing --- they occasionally have some real history behind them, and that is worth some respect, and makes great copy. The ones that run amok like high speed henriettas and never say anything.... well,.....

Also, as you age, things slow down. Around age 50 or so, your hearing tones begin go fade and what used to run fine a 55wpm needs to slow down a little to be descriminated against the noise. Keyboards help there if you don't mind the monotony of it. But, a fist with some character spins a much better tale, in my book. I would much rather copy the 91 year old that QSO'ed Marconi in 1923 on spark sets, rather the the dud dood talking about his latest find on the internet at www.wherever.com. The 91 year old had some character on his fist, even if all he could muster up was 25 wpm or so, and something to tell you too!

If you are into mill copy of long wx bcsts or such, or tfc lists for fun, it is nice to hear it sent with the machine monotone. All else, give me someone with some character on his fist, so I get to know him a little.

If I want computers, I can use the internet.

Hi S.

>I need a design for a HF receiver (3.5MHz-30MHz but at least >3.5-18M) that is OK for a back yard (which has a pool, garage >etc).

Is it an antenna for reception only that you want? The usual arangement is to use an end fed wire, as long as possible, as high as possible, and as much in the clear as possible.
For casual use, the inefficiency of an untuned antenna won't hurt your performance much. This is because at HF, the weak signal are masked under atmospheric noise rather than receiver noise (especially at the lower frequencies). An inefficient antenna will reduce the signal level but it reduces the noise level an equal amount.
For improved performance at the higher frequencies or when the bands are "closed" (when the minimum dicernable signal might be limited by receiver noise figure), you might want to add an antenna tuner. An "active antenna", which contains an integrated pre-amplifier, also makes an effective receiving antenna. Both arrangements are far more costly than a 100' hank of wire.

> I have seen a commercial VERTICAL affair but was many >meters high (and vertical and expensive ..how does this pickup >horizontally polarised signals (I'm new to this, as you can tell).

If it's short wave reception that you are interested in, don't worry about polarization too much. After a few reflections, the polarisation gets pretty well mixed up anyhow. The polarisation will probably be eliptical by the time it arrives at your antenna, so either a horizontal or vertical antenna will do the job. (If we were discussing ground wave or line of sight propagation as used at VHF and above, polarisation would become critical.)

If you have some specific application in mind that makes a simple random wire antenna unsuitable, please post the situation and we can discuss it in more detail.

Regards,

Blake

What a silly argument. Are you prepared to take a math test to add
numbers at only 1/5000th the speed of a Pentium 300? Let's see
that's "only" about 60,000 ops per second.

REPLY...

I'm glad you agreed so fully with my previous message. I keep hearing that CB radio is dying, but around here it is still going strong. And amazingly, there are few problems (interference, troublemakers, etc.). Perhaps these are big city problems.

I doubt that ham will die however. In fact, as the world gets smaller, with interntaional travel becomming more common (business, etc.), I expect that ham radio will actually grow over the next few years.

Sorry for the quick reply. We have a strong thunder storm moving in and I had better turn off the computer.

Dwight Stewart (KF4URZ)

Sorry to hear you are inactive. It might be interesting to find out why.

I sometimes carry a 2M box just for the same reasons. That is fine,
and often as useful or more so than a cell fone.

I sense that sometimes folks enter ham radio with a great deal of high
expectation and find out that it is not what they expected. Then they
become inactive or leave the service. That is fine. I still respect
them for any time they were able to put in and do something of use to
themselves for that time.

This is a main problem with digital modes. Many folks seem to not be
able to grasp that. In CW lingo, digital modes are not QSK. They are
not bidirectionally fluid (unless you use dual channel diversity such
as opposite sidebands or diverse audio tones so several channels can
occupy the same frequency) or similar schemes. If I want to store and
forward a message or simple mesend then usend on the average ham channel,
then they are good at that. If you want to store and forward at odd
hours then use the internet, not ham radio, and you will be farther ahead.

If you are really wanting to do a digital nobel prize for amateur radio,
then develop a small satcom system of emergency communications specific
to amateur radio that will handle all the various modes and encodings
that you will likely need, and network into existing and future emergency
comms. Something like that would be much nicer than the average 2 meter
bitch box type of thing or the 80M fone band funzies that occurs. And,
you could put all your digital dreaming to good use. Unfortunately,
I get a great sense that few of the technically inclined newcomers are
able to or willing to do that kind of thing.

I would side with you here, and also agree that contesting and paper chasing is more of a waste of time than anything else. But, it can serve its use as a minimal skill training device. Field Day is most definitely a good and worthwhile operational/logistical/etc training device, if it is done right, even though it has a lot of fun times involved. I speak with some 25 Field Days under my belt, and do have some credentials there. But, that tends to be more the exception compared to the usual contest. Still, many of these sorts of activities do have skill training merit (in round about ways) and that is part of what ham radio is about, too. Also, a little easing up of the old tension cap helps, and finding a different band helps too, when a contest weekend comes along. That is not usually a problem on 10 meters and above though, in my experiences. Territory abounds on those waves, if folks will just use it.

Well, if you want to stay inactive, that is fine. But, if you want to become active.... then take that first step and do someting about it or with it. There is a lot of usable spectrum from 10M on down that can be used for a lot of new amateur digital technology development. It only needs to have someone take that first step if there is an interest in doing so.

Dan Fin wrote: "Did these people really *deserve* to get saved when they used such an outdated mode to call for help?"

It almost brings tears to my eyes to believe that someone could pen such cold-hearted words. Carl wrote something similar some time ago in regard to another ship in distress that had called for help via CW on 500 kc (occured 1-2 years ago).

It's shameful that these two radio operators stain the exceptional history radiomen have displayed in their caring and concern for their fellow humans in distress at sea.

This brings up an interesting point. There are some things that do
very easily on dos or even CP/M that makes windoz croak. Maybe that
is why a good CW program on CP/M is only 12K (for example on a Kaypro II),
while the same program on dos is 20K (on dos 2.1/3.3/5.0 etc.), yet the
same program for windos is 250K. Something to be said sometimes for
loendian tech, even in ham radio..... But, you are right, most folks
don't care..... but a few do.

> > It is to learn discipline and not give in to the easy way out.

> Not many people want or actually interested in amateur radio. How do
> you make them learn discipline ??

You put them on the internet instead and they are happy on windoz but would
croak on unix..... no discipline in windoz, plenty in unix.

CW is like unix.... it takes some grunt to make it play, and some
operator savvy.

SSB or DIGITAL is like windoz..... it is done for you, but beware when
it crashes.

I LIKE IT!

The problem is that I use several different kinds of machines and OS's,
so finding a portable program to do the real-time CW via the internet
might be a challenge. Barring things like network bottlenecks, it should
be rather instantaneous and compatible for QSK operation.....hmmmmm.

I would hate to assume everyone is running a windoz junker with a
soundblaster card, but that might be necessary (YUK). It would be more
fun to do it in a spare virtual console on unix, perhaps that came up in
a keyboard mode with the sound active in real time on the motherboard beeper.

Sounds fine to me, and does not require any licensing. It might even
stimulate some of the no-coders to see what it is all about. That, even
of itself would be a worthwhile venture.

It might even be a good way to allow the experience of American Morse.

> Many people have replied to my request for information on "virtual CW" with

You would need to send a series of packets or variable length packets
encoded with a timing function appropriate for the letter. The packet
would be accepted in a mode such that it would log a series of packets
to memory, then sound them on the fly. On a 30 mhz or faster machine,
that would be easily doable, unless the operating system was too slow
to handle it.

For example send 1 packet for the letter e.

send 3 packets for the letter T, etc.

That would be a crude way, and not very elegant, but would be
physically the most correct way.

It should be possible to encode in one packet a stream of morse text,
something like the text that is seen in folks .signatures such as
``.'' for dit and ``-'' for dah, and similar for prescribe timing spaces.
Then, all the program would need to do on the other end is decode the
timing from the text and sound it.

That would be a somewhat more elegant way.

Probably the best way to do it via the internet is just send a packet
encoded in ascii representations of the full ITU Morse code character
set, and convert that on the fly.

I could sense that maybe 50 lines of straight code in a morse function
in C might do it and it could be tacked onto any available program for
which C calling functions might be added that did basic ethernet/serial
interfacing.

For timing, have the program read the system clock, and count 10 seconds,
and divide accordingly.

My crude dos and CP/M programs use a simple incremental counter as the
timer, but they require recompilation on the target machine if the speed
of the processor is off of what I usually run.

For the bencher paddles, you would need a timing loop of some sort that would read the ADC port (joystick port) and look for a simple presence or absence of a voltage. It could also be done by merely reading the RS-232 port and monitoring the receive line as high or low, but making a keyer do that would not be easy without some interfacing chips or a transistor or two for logic ttl to rs232 conversion.

If you have the joystick port, you could read midscale as nul and then read - or zero as dits and +5 or whatever as dahs and do the timing functions on them. You could even do the same thing on a parallel port if you read the bit pattern on the parallel port in real time. A tieup line to +5volts or such and pulldown through a 1K ohm resistor would allow you to monitor the transitions and logic levels corresponding to the dits or dahs. It could even be made self-completing if you set the timing function sequentially after first firing to read then check for other transitions or read and space time and then check for other transitions.

That way you could even hook your bencher or your bug or your straight sending iron into the line.....(:+}}....

> Meanwhile, I will leave the arguments over code vs. no code to the rest of
> you.

Do.... Hey, I would love to see if this kind of thing would work.

Anyone got any code snippets they want to try out on dos or unix boxes?

Morse Code on the Internet..... yup.... the dawn of a new era.....

Bill, you are forgetting American Morse where timing is in the spacings.

Try a letter C in American Morse, for instance......

dit dit space dit

or the letter Q

dit dit dah dit.

That sounds well with a tapper (read sounder). Thus tapping on pipes
is legitimate. One needs to just develop a different hearing pattern
on the sounds. Pipes characteristically have rather long time constants
so even dahs should sound well.

REPLY...

I won't dispute that Bob. It is probably far better for someone with actual experience to design the radio. But the bigger companies are building radios to be used all over the radio spectrum.

For these companies, the Amateur radio market is only a tiny part of their business. And because it is such a small part of their business, it is unlikely that they would go out of their way to hire engineers with Amateur experience. That is not an excuse, only a fact.

But, in spite of that, you still have to give the "Kenicoyasawhooie" companies some credit. They are sticking with ham radio, even if it is not that large of a market. And they are building decent radios, even if they are not the very best designed radios. And, if you shop around enough, you can find a few sweet apples in the lackluster "Kenicoyasawhooie" orchard.

By the way, I like Carl R. Stevenson's "YaesIcoWood" better than "Kenicoyasawhooie." Although "Kenicoyasawhooie" is not bad.

> With just clicks, you couldn't tell a dit from an intraelement space.

Also, one might consider that there is a ringing that occurs on the sounder board (the reason for the sounding board to begin with, and for the sounder box often used [and maybe also for the tin ``lids'' used as amplifiers or ringers by the ``lids'' of telegraphy fame]). If you listen carefully, you can hear a ringing bell sound rather below the intensity of the click/clack of the armature. It rings kindof like a plucked and muted stringed instrument, but not so long in time constant. It sort of seems like the armature resonance coupled to the sounding board resonance, perhaps.

Even continental morse flows well on a sounder because of the long ringing time constant of the entire machine. It is also a fun way to interface Mr. Morse to a modern receiver, if anyone cares.

Not with GSM (the system used in Portugal). I suppose it is possible to pick up the GSM network, but not that easily. However, he might be able to use a modified radio to pick up the actual cellular phone (and local repeaters that are not on the GSM system), but that would be very limited.

He best bet would be to look around the internet for radio modifications, modify his radio, and hope he gets lucky. Or he could try to find the guy on the television program and ask him how he did it (ask the tv station for the guy's name and address).

They have been setting up 1.2GHz repeaters a few years ago... Why? Because there are lots of hams, but most of them only communicate inside JA, not with other countries. Many only have contacts with members of their local club. For that, VHF/UHF/... will fit most times...
Also: How many of them are active hams? I met quite a few telling me that they would be hams too, but when I asked for their call, they only remembered "something starting with J..."

>learn something from JA.
I learnt when I was there. What did you learn about Canada meanwhile?

>are even under used. 2m repeater are underused here in Montreal
>as well.
>commercial guys are almost there to take our bands.
>keep cw and make ham radio dead. heheeheheeee....
Hmm, I don`t know about the situation in VE or W (although I heard that there are fewer hams/sqkm than in DL - maybe that`s the reason why distances are longer and activity is not that high?)
Here in DL you only need a "real" antenna to hear activity on VHF/UHF/SHF - at least in larger cities. All only a question of density...

Wrong again, Mr. Know-it-all HAMBO. I've passed the all-important Morse code examination. Unlike you and others like you who continue to stick their heads in the sand, however, I realize that continuing the requirement in 1998 does nothing to help...and in fact is hurting amateur radio.

> from a computer monitor, it drives me crazy when I'm on ten meters.

REPLY...

That depends on where the interference is coming from (and to answer that, you are going to have to do some work).

If is is coming from the cable, between the computer and monitor, the solution is a better shielded cable. If it is coming from the internal electronics, the solution is to increase the shielding on the case. If it is coming from the power cord, the solution is to use another outlet (or a filter). If it is coming from the CRT tube, you out of luck.

How do you find out which is the source of interference? If it is the cable, the way to test it is to try various cables. If the interference changes, get a cable with the best shielding you can find (an electronics store can help you).

If it is case shielding, the way to test it is to carefully wrap grounded aluminum foil around the outside of the case (don't short out any connections). If the interference changes, take the case off and spray the inside of the case with a metal coating and ground the case. If you're really cheap, you can glue aluminum foil to the inside of the case and ground that (it has been done).

Sometimes interference can come over the power cord (or the ground wire on the outlet). Try connecting either the monitor, or radio, to another outlet. Also make sure they are not grounded to the same grounding block (assuming you have your station properly grounded).

If none of these solve the problem, the likely source is the CRT tube itself. The only solution is to replace the monitor (making sure to get a well shielded monitor this time).

Of course, before you do all that, try moving your radio around a little. Sometimes you can lose all interference by simply moving the radio farther away from the computer, or changing the radio's position in relation to the computer (move the radio to the other side of the computer).

One solution I saw involved using a grounded metal shelf between the radio and computer. It did not get rid of the interference completely, but it did cut it down. Another solution involved placing the radio in a grounded metal housing (again not perfect, but an improvement).

Good luck!

> Is a false alarm a failure?

In my view, it is a failure. False alarms are so pervasive that bridge crews now routinely ignore GMDSS alerts because they only see false alarms, never a bona fide alert.

I've never heard of anyone ignoring an SOS on 500KHz, and the 15-18/45-48 minute arcs are still emblazoned in red on my shack clock, habit of 21 years of sea duty.

>of the service in which they are using it. Example: I have have a ham
>license.
>That ham license doesn't give me the right to hit you on the head with my
>VHF radio, although, at this point, I think that might be a good use for a
>VHF
>radio.

Read my comments again, old man. I said "WITHIN LEGAL PARAMETERS, OF COURSE"
Again, if someone passes the tests and is issued a license, they have the LEGAL
RIGHT to use their radio for any legally-permitted purpose, as specified in the
FCC rules and regulations.

>As Mike mentioned, most hams understand that the autopatch on a VHF or UHF
>repeater is there for a) emergency calls and b) once in a while other calls
>and
>is not a replacment for a cell phone. Most people with ham licenses that
>shoud
>have little yellow FRS radios instead don't understand that. Thus the
>conflict.

Hey, if you wish to dictate who does and does not use "your" autopatch, you
better make sure it's a closed system. I will use any open autopatch I damn
well please. If you don't like it (assuming it's your repeater), SHUT IT OFF!
If it's NOT your repeater, than you really don't have anything to say about the
matter.

(more psychobabble by card-carrying member of the ARRL deleted for the sake of
brevity)

>Queston: If the 'old girl' was to die tommorrow, how will that make you

kingsnake (kingsnake@dm.net) wrote:
: How does a year in the slammer sound???

Like a major breach of my guaranteed first amendment rights.

Think about it, the government is trying to regulate what you should and shouldn't listen to. Granted, its not a new thing, but laws about it seem almost as rediculous as prohibition...

The same freedom the US fought for for other countries is now in jeopardy IN THE US ITSELF!

and why? cuz some senator got snitched on when someone heard him talking about his scandalous affairs on a cellphone....

When (maybe if?) people realize almost anything that is wireless (note that i am not DISCOUNTING things WITH wires here... :) can be received by other than the party intended as the recipient.

If you think about it, weigh all the angles, and dont just spout off for some reason (like if you have a cell phone or something), you can see that making such a law as the one that exists is a waste of paper.

Now, i don't listen to cellphones, frankly, i'm not interested.
Nor do i plan to be. In fact, I also find it sad that it is almost impossible to find a way to communicate using wireless methods without the risk of a third party interception. Hey, i'm just like everyone else and sometimes want my privacy. But there comes a point when you have to be aware of what is out there and how to protect yourself. Ever see pulp fiction? When he is bringing the Overdosing girl to the seller's house, he realizes that the guy is on a cellphone, and immediately hangs up after claiming audibly "prank caller prank caller, who is this? i dont know you!" Now, beit a somewhat semi-believable and far-fetched example, i think we should all think about what means we communicate through, because you never know who is listening...

I can't wait until the day they make it illegal to hear someone who is talking above average volume to another person at another table in a restaurant.

All this talk about code well taste this
I personally know several xclass ops and none of them
use code by hand but by computer and they type in the message
and the pc send the code for them and the guy on the other end
recieves the code and his pc spits out words so why learn the code if the
computer knows how to? Another delema is not all xclass ops are real
and out of the many I know none of them can even do code by hand and yes
they all say I learned to get to the top and that my friend is a lie because
I was offer to get there for money and out of all the xclass people
I know of at least 2 out of twenty that I know really have a real lincense
and the other 18 were there friends who know nothing about radios so this
self policing the ham band got out of hand and anyone who has a friend is
now a ham , lets go back to the 70's when the fcc gave you the test and not
your friend. that will scare alot of them and they would all flunk and the
air will be clear for only licensed operators not just abunch of idiots who
think the code should be gone because the code may say a life someday
because the only radio was a car radio that you converted to a cw machine
and then the code you learned will help if not well lay there and die
because your friend forgot what amateur radio is and why we have it and that
is to learn how to communicate using anything you got. if not then maybe you
should just stick to the citizen band where no code is required and leave
the ham band for the people who really like to learn and help others.If
everyone was a ham then the air would be crowded with gigberish and that is
what your chicken band CB is for the people who just gibber so there you
goand I said what I said and I really don't care what anyone says because
the code is here to stay and I will fight for that right just to keep
children who just play away from real radio operators......

No one ever said there should not be any CW in the future ... we only
want to change the exam proceedures.

The owner of that ship should be held accountable for not having more
modern communications capability on board.
The Wild West indians here in the USA once used smoke signals but I
doubt there are very many people now who could recognize a SOS smoke
signal sent in Cherokee or Black Foot languages. Now the idians would
probably use FRS or SSB or FM on 2m or 6m or maybe 20m.

Why retake the code test? Get a doctor sign your application indicating you are handicapped and cant take the code test,. like so many in Charleston have done. We got loads of Extras here that dont even recognize their own callsign in CW! Take a look at the affadavit on the back of 610. A doctor is not required to even know what he's signing! I like CW because when I was first licensed, I HAD to work CW a year before I could take the" Class A" exam. So I learned to like it. Now I QSO mostly on CW (anything up to 45 wpm) and handle traffic, for the most part, on SSB. To each his own. Amateur Radio has something for everyone!

Yes, I highly recommend them. In fact it is the only HF rig I have.
Plusses:
Can be turned up to 150 watts and still have clean sig and no overheating.
Easy to operate and program.

Minused:
No built-in keyer.
I have done a lot of contesting with just my TS50 and a random length loop
and was able to get a
"Clean Sweep" in the November Sweepsakes SSB in both 1995 and 97. The
going rate for a used
one here is about $600-650 which is MUCH cheaper than a new one.

I just purchased one (used) along with the AT-50 tuner, about two weeks ago. I have installed it into my truck and am using hamstick antennas.

I have found it easy to use and have received nothing but good reports concerning audio and signal performance. I live in Arlington, TX and have made contacts in Ireland, Japan, Cuba, and England from my driveway using the hamstick antennas.

I have found no problems with the radio or tuner thus far.

Good Luck

Danny

>The number of station licenses is increasing... unfortunately...
>especially among young people (it's very common among high school
>kids).

I assume from what you state here that you are saddened by the increase in station licenses in Japan??

>please let me know any 1.2 or 2.4 GHz repeaters in US.
>I am sure others are also interested.
>
>

Suggest you pick up a copy of the ARRL Repeater Directory (available through the ARRL (http://www.arrl.org). I see no reason to do such easy research on your behalf. Also, you might connect to the artsci web page (www.artscipub.com) and do a little research on your own.

>flooding the bands is the way to keep the spectrum.
>If HFs are packed, many will move to higher bands.
>That's what's happening in JA.

Simple suggestion then to getting more hams on the bands. Do away with all testing, pack a license application in with every radio sold and have, on the license application, that whoever applies for an amateur license certify that they will abide by all applicable regulations. This will fill up the amateur bands quickly.

>introduce phonetics instead of electronic devices.

I have no idea what this means... Please explain, in detail, what is mean by this statement.

You don't really address my statement of electronic theory in testing. Your suggestion only refers to some vague items on how to make and respond to a call. This does not require testing, only a few sentences (or perhaps a paragraph or two) in a pamphlet. I seem to remember in one of your previous posts concerning antenna length that you stated that you memorized the questions and answers for the exam and promptly forgot everything. This tends to support my suggestion that testing for amateur radio exams be dropped, and a simple applied for license be substituted along with a small booklet outlining how to operate a radio and make a call.

BTW, Masa, many of us are still waiting for the names and addresses of the 'several personnels' that you mentioned in your posting regarding your licensing suggestion. You did state that they were interested in hearing everyone's opinions, but we have no way to contact them with our comments... How about it??

CrACKeD....
I understand the point you are trying to make very well, but your logic
is badly flawed. Take a close look at the HF Amateur Radio frequency
allocation and the charts which describe the modes of operation allowed.
You will find that CW is ALLOWED on every HF frequency. That is ONE
good reason for keeping the cw REQUIREMENT in the testing process for HF
band amateur licenses.

Sorry CrACKeD... your argument just doesn't hold water.

Are you blind, or just irrevocably dense? This guy stated quite
clearly "I PERSONALLY THINK" meaning that those were his opinions. As
counterproductive and as ludicrous as I find code testing, I would not
be so bold as to say people don't have a right to their own opinions,
nor would I shamelessly misquote someone like this to make some
pathetic point.

Hi radio lovers,

I need a design for a HF receiver (3.5MHz-30MHz but at least 3.5-18M) that is OK for a back yard (which has a pool, garage etc). I have seen a commercial VERTICAL affair but was many meters high (and vertical and expensive ..how does this pickup horizontally polarised signals (I'm new to this, as you can tell).

If you can help please either email me advice or post it here. I am very appreciative.

S.Burrows@mailbox.uq.edu.au

You will find that SSB is allowed on every HF frequency except 10 MHz.
This is one good reason for allowing no-coders to operate on HF bands
except 10 MHz. If you like CW, go to 10 MHz.

Look to http://www.cyberway.com.sg/~pearllim/basic/morse.txt and
http://home.earthlink.net/~ggte/mtgold.htm for Morse Tutor programs.
The latter specifically says it supports sound cards. At
http://www.frankeser.net/drivers/ham-mors.htm is a page listing the
various software. Some of the descriptions mention sound cards.

Look to http://ld.net/?kc5fm for help with low cost long distance
service no matter where you live.

Let me know how more I can help.

I don't believe I've ever posted a message criticizing MASAs grammar
or spelling. I did attempt to explain, in a serious way, that if he
wants to be taken seriously he needs to make a more concerted effort
to write intelligently. Apparently nobody, with all their politically-
correct feel-good nonesense, had the testicular fortitude to explain
something that should be painfully obvious to the kid.

Of course I get your point...we should welcome with open arms anyone
who wishes to post unintelligible drivel to an English language
newsgroup just as we should welcome anyone who wishes to avoid learning
code, to the HF bands. Same logic, same result. Those who don't learn
English well enough to write understandable posts and those who don't
learn code are both evidently uninterested enough to effectively post or
work code communications-still a major, required portion of ham
radio,despite the No-Code Agenda. If Cutsie wishes to remain totally
misunderstood and Stevenson and others wish to remain half-assed, it's
their choices.

Not on the GSM setwork. In the nordic countries we also use NMT,
which can easilly be tapped.

If you actually passed the 20wpm test, then take it again. No sweat.
It should go like you were in your sleep, right.... like clockwork,
like apple pie, like water off a duck's back..... etc......

If you are one of those that can't do the code....... then you have
problems, and the old pendulum has swung around to bite.

ANY self-respecting ham should be able to retake any part of any prior
passed exam, no sweat. Something is wrong, if you can't, real wrong.

That is not meant to come down on you, but is a wake up call for the
entire ham community, perhaps?

Many radios can do this.
Easily.
I cut a green wire on my Yaesu FT-530, and it receives cellphones. I did it mainly for the out-of-band transmit on UHF, because the radio, when at lowest power, puts out legal power in the FRS frequencies, so i can talk to my friends who have FRS radios. That turned out to be kind of a waste though, so i just left it modified for the sake of not opening it back up and fumbling with rediculously small wires.
So yes, for a FACT some FT-530s (later models had some components changed and may not be able to get cellphones though...) do this, and many scanners do, and i've seen an alinco, and an icom do the same. I'm sure that there are many others.

Even though the US is the only country I know of to fight for the right of other countries to be able to listen to any radio they wish and then a few years down the road, turn around and make it illegal in our own country, I think many people can and do listen to cellphones... I tried to see if the mod sheet i followed was correct. But seriously, who would care to listen to a bunch of "hi hon, i'm on my way home, do we need milk?" conversations? Sorry, but even though my rig does it, i'll stick to scanning the police freqs, weather freqs, FRS freqs, and of course, the Ham freqs..

Eavesdropping just doesn't seem "right..."

;)

-joseph

That is probably asking a little much..... something like the commercial
exams might be better:

novice/general/advanced 20wpm straight copy sending and receiving
by hand, without bugs, keyers, or mills
full ITU alphabet and punctuation.

extra 25wpm straight copy sending and receiving
by hand, bug, keyer, with/without mill
full ITU alphabet and punctuation, but
only after 12 mos time in grade at the
lower level.

Sounds like a winner to me.....(:+}}.....

You can be sure they will be very quiet and hope it goes away soon and silently....give it a little time, they will be back with the same old tired sonatas, ignoring reality as though they created it...

That's *THREE* CW initiated marine rescues I know of within the past year, while the new marine GMDSS system has had a 100% failure rate--all alarms so far have been false!!! Yeh, Cw is old, obsolete, useless--tell it to the ship's crews.

This sounds false. My expectation is that the reporter did not do a very good job of playing the facts, but was grandstanding to the heathen masses for headline appeal. According to what I can find it is February 01, 1999, that the offical use of Morse Code as a mandatory 500KHZ distress requirement will be discontinued, and it will be replaced by the GMDSS (Global Maritime Distress and Safety System). For reference see Title 47 CFR 80 and referenced documents. Apparently Great Britain has ceased watchkeeping at 010001UTC JAN 98. Even after February 01, 1999, Morse is very likely to be used in the backwaters of the world where the Morse system is in place, still, for a few years longer, since it is doubtful the entire world fleet will be converted to the GMDSS, on time, manpower is cheap, and bodies are already there pumping on the brass monkeys. The problem is that the third world fleet (read things like the Bahamas, Cuban, Liberian registry) is way behind schedule getting converted to GMDSS, and as long as they don't pull into port in the US, GB or GMDSS countries, noone probably cares.

Gee, I wish I would have been able heard that call, since I usually keep a 500khz receiver going anytime I am in the shack. That night, I was SKN'ing. I only saw it later on CNN.

> modern communications capability on board.

My guess is that the ship may well be equipped with Global Marine Distress and Safety System (GMDSS). I'd also guess that the master of the ship probably didn't trust GMDSS.

The basic concept of GMDSS is that Search and Rescue (SAR) authorities ashore as well as in shipping in the immediate vicinity of a ship or person in distress will be rapidly alerted to a distress incident so that they can assist in a co-ordinated search and rescue operation with the minimum delay. The system uses a combination of satelites and radio to send alerts, identify the vessel and it's location, and for voice communications.

Unfortunately, it is plagued with problems, both in reliability and in implementation. So the master of Oak used 500KHz CW as mariners have for generations.

The lack of familiarity with operating the GMDSS equipment is universal. The 99 percent false alarm rate is a strong indication of the truth in that statement. There seem to be some common factors in this problem. Most of the equipment is not at all user friendly. The operating manuals are VERY POOR in their explanations of procedures and the abbreviated operating diagrams were designed by people who already know how to operate the equipment, but have little or no understanding of how a watchstanding Mate would view these explanations. Lack of user friendly equipment and operating manuals which make sense are contributing to the 99 percent false alarm rate. The attitude of the Mates is such that they tend to disregard an alarm until they have time to look at it. There are so many alarms that they lose their meaning.

At a GMDSS Conference held in Plymouth, UK, a British ships Master, Captain Nick Cooper, said the system of automated distress calls using Digital Selective Calling was "almost totally unworkable, impractical and unreliable". He said a combination of false alarms and badly designed equipment was causing dangerous situations on bridges and could lead to collisions or groundings by distracting ship's officers from navigational duties.

Capt Cooper was the most outspoken critic of GMDSS. But most other speakers reported major problems with the system, which is based on now-outdated technology, including a very high incidence of false alarms, slow implementation of the system with many ships unlikely to meet the

February 1999 deadline and only a handful of countries having acted to implement GMDSS effectively.

It would appear to me that any ships owners who rely 100% on this "more modern communications capability" without backing it up with traditional 500KHz SOS capability, should be held accountable for gross negligence to their responsibilities for safety of mariners.

675. Stevenson proposes "Rich Kids" Amateur Service

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-06 00:00:00 UTC
From: K0HB@JUNO.COM
Message-ID: <884101742.529727490@dejanews.com>
Source record: 182433

Carl Stevenson said this about license fees for US
amateurs:

> I said $100 per year ... not $1000 ... in other words about what
> you'd pay for dinner for two and a couple of drinks at a nice
> restaurant ... if ham radio is not "worth" that to you, you're
> not very dedicated. If you can't afford that, your financial
> situation is such that you ought to be spending your time
> on a second job, or schooling/training to get a better one, rather
> than wasting time and spectrum calling CQ DX or CQ Contest.

I am most surprised to see the above comments from Carl
who I thought was opposed to arbitrary "barriers" to entrance
to the Amateur Radio service.

Most of us got into this service by scrimping and saving from
allowances, after school jobs, or paper routes to get our first
rigs and get on the air. Amateur Radio has historically been the
"nursery" where young people got interested in "things technical"
and went on to adult careers as technicians and engineers.

Now Carl would support a $1,000 (10 years x $100) "entry fee" for
a teenager getting his first license, or a young wage earner trying
to support a new family! (And we haven't even started to talk about
actually assembling a station yet!) Can you imagine ANYONE, even
a reasonably affluent adult, plunking down $1,000 to get a simple
license to engage in an avocation? He calls it equivalent to a nice
dinner for two and a couple of drinks.... for the folks we want to
get interested in this hobby, a "good dinner" is a #2 meal-deal at the
local McDonalds, or the special down at the university cafeteria, not
lobster and chardonnay at the Hilton.

Or maybe just rich kids should become hams?

Sorry Carl, you've lost touch with the meaning of "avocation".

jhine41015@aol.com (JHine41015) writes:

> I'm considering building my own repeater split site system.
> Question: Can I house the other half of the split site at a NOT yet FCC
> licensed individual's house?
>
> I am the control operator, right? Or do we share that responsibility?

Well, you're the control operator unless you designate someone else to be control operator---the "someone else" must have an FCC license, Tech or higher, meaning: no Novices, no reciprocal permit holders, no Canadians operating under a Canadian license and, in the near future, no CEPT or IARP holders. 97.103(a,b); and see 97.205(a).

More to the point is that you are the station licensee. That means you have to have "physical control" of the station before you can attach your callsign to its transmissions. (97.5---or, perhaps more to the point, the FCC is going to treat any station using your callsign with your permission as under your physical control, meaning you're on the hook.) In addition, as station licensee you promised on your form 610 to make the station inaccessible to unauthorized persons (i.e., persons you do not designate as control operator, and persons you legally can't designate as control operator.) So it would seem you have to put the station in some sort of locked cabinet or something, but that's all: many repeaters are kept in places other people own.

I doubt the "lock police" will come around to check, but the point is that, as station licensee, you are responsible for *whatever* the station does at any time (97.103(a)), no matter who the control operator is, so it's only prudent to lock out people who don't know what they're doing. In addition, only a fool would fail to check to make sure the station was safe to anyone (kids, cats, lovers, friends, etc.) who might come near it, including the RF check now required. (Will your insurance cover this sort of risk---a radio station at someone else's house---if an injury occurs?)

One more duty at station licensee: by 97.103(c) you have to make the station available to FCC representatives upon request. That means you have to be able to get at the station at any time, so you'll need the keys needed to get to it, and your friend's agreement to allow you (any any FCC personnel with you) onto the premises at any time. That agreement---the license to use his place---you might consider putting in writing and running by a lawyer.

Note that I'm not a lawyer and those who want authoritative opinions should consult one.

Baldy (no callsign?) wrote: "I personally think contesting and paper chasing are a waste of time and spectrum, and should be banned."

That's due to you not understanding the underlying purpose of those activities. Only the most robust amateur stations, efficient in every aspect, and thus well-prepared for any emergency/disaster, can seriously compete in the contests. Each competitive event maximally tests the equipment and operator - both are pushed to their extreme limits. This continual *voluntary* training makes such an operator the ideal emergency communicator when your community is stricken with a disaster.

It would, if you had a 1/4 watt or so two yagi antennas could get you a couple miles or so depending on many factors.In the motorola handbook you'll find some hybrid VHF broadband amps I think the cost is around $40 to $60 but that was some time ago. They are very small, about the size of a small box of stick matches. I hooked one up to the output of a very robust RF modulator and pumped it into a yagi one night about 2:00 am, my buddy watched the video on channel 4, it was 100% and he was 6 miles away. We were VERY surprized and terminated our little experiment with extreme prejudice. We estimated the output to be about 350mw or so and he was almost line of site from my qth.

> babarum@hotmail.com wrote in message ...
> >>I would appreciate if anyone could tell me what ham radio has to offer
> >that computer/internet doesn't offer.
>
> What ham radio offers is listed in detail below:

a. communication between to people via vhf/uhf within a 10 mile radius using a repeater system.
While you could run internet from your car and a cell phone this would be a very expensive way to communicate.
b.Offers an opportunity to build radio transmitter and reciever circuits and use them on the air on frequencys set aside
just for you!
c. Works even when the phone lines/ power lines are down.
d. No annoying banners when you turn on your ham radio :)
e. Contests, awards, etc. What was the last Internet contest you were in?
f. No monthy user fee's
g. Ability to communicate from remote area's where there is no power available.

The internet and ham radio are two completly different things, why do you have to have one or the other?, together they make a nice pair. There are guys using the internet to link repeaters together, I think the internet will enhance ham radio in the future.

If anyone can help me find an owner's manual and service manual for an ICOM 726-S it would be greatly appreciated. Just baught it, and it needs work. Probably a non-American-market radio.

Willing to pay postage, photocopy costs, etc.

Thanks!,
Scott

692. FS OR TRADE Cushcraft Antenna

Newsgroup: rec.radio.amateur.misc

Hello To All,

I am selling a Cushcraft 10 meter magnet mount antenna (Model CS-28M) in Brand New Condition. I purchased this in anticipation of putting a 10 mtr rig in my truck but the deal fell through. I have used this antenna ONCE.

HRO PRICE: $59.95
****YOUR COST $39.95*** plus shipping

Thank-you for reading my ad.

Well we've had no lives saves because of CW in
amateur radio for decades.

Not so. Any ham equipment can be modified in any way you
want...BUT if you transmit illegally, then you break
the law as you correctly note below:

Hello to all... sorry if this is a tired subject.

Can anyone provide a (the) mod for the 706MKII for either general coverage TX or at least TX at 149 MHZ? I have a transverter for 1.2 GHz that I use for repeaters and the 20MHz offset on that band requires it. I have a 2 diode removal mod (from QRZ) and a 3 diode removal mod. Don't know which one will do what I need. Help appreciated.

Both of you earn an "F" and an expulsion from the class, since the CW
debates are off-topic in rram.

It's right up there in the paragraph above. Get involved. It's the
only game in town, so make it represent YOUR views. Of course, if you
think that the ARRL really has all of your best interests as a ham and
an American citizen at heart and is doing a perfect job of
representing them, then do nothing, as most hams do.

Just don't come whining to me when it's gone, or has been turned into
something you don't even recognize, much less enjoy.

Well, I am a no-code and have not upgraded. However, I would not find
somebodys' pride of accomplishment abhorrant at all. In fact, I find
it something worthy of congratulations and respect.

The point I hope to make, is that not all 'no-coders' are anti-cw; it is just not our cup of tea (at least at the present time). Besides, if it were not for those of us in this license class who would handle the field day barbeque when the 30MHz+ activity slows down and the hf bands are rolling full speed?

Howard KE6MAK

699. Linux AX25 HOWTO (part 1/3)

- --- BEGIN Linux AX25 HOWTO part 1/3 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v1.5, 17 October 1997

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25, NetRom and
Rose support for Linux. A few typical configurations are described
that could be used as models to work from.

The Linux implementation of the amateur radio protocols is very
flexible. To people relatively unfamiliar with the Linux operating
system the configuration process may look daunting and complicated. It
will take you a little time to come to understand how the whole thing
fits together. You will find configuration very difficult if you have
not properly prepared yourself by learning about Linux in general. You
cannot expect to switch from some other environment to Linux without
learning about Linux itself.

1.1. Changes from the previous version

Additions:
Joerg Reuters Web Page
"More Information" section
ax25ipd configuration.

Corrections/Updates:
Changed pty's to a safer range to prevent possible conflicts
```

Updated module and ax25-utils versions.

ToDo:
Fix up the SCC section, this is probably wrong.
Expand on the programming section.

1.2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html>. This document is also available in various formats from the sunsite.unc.edu ftp archive <ftp://sunsite.unc.edu/pub/Linux/docs/howto/>.

You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

1.3. Other related documentation.

There is a lot of related documentation. There are many documents that relate to Linux networking in more general ways and I strongly recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/HAM-HOWTO.html>,

the NET-3-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/NET-3-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Ethernet-HOWTO.html>,

and:

the Firewall-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/Firewall-HOWTO.html>

More general Linux information may be found by reference to other Linux HOWTO <http://sunsite.unc.edu/LDP/HOWTO/> documents.

2. The Packet Radio Protocols and Linux.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25. The NetRom protocol

features dynamic routing and node aliases.

The Rose protocol was conceived and first implemented by Tom Moulton W2VY and is an implementation of the X.25 packet layer protocol and is designed to operate with AX.25 as its datalink layer protocol. It too provides a network layer. Rose addresses take the form of 10 digit numbers. The first four digits are called the Data Network Identification Code (DNIC) and are taken from Appendix B of the CCITT X.121 recommendation. More information on the Rose protocol may be ontained from the RATS Web server <http://www.rats.org/>.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom and Rose support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@poboxes.com. Baycom and SoundModem support were added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now maintained by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems. Thomas's new soundmodem driver supports Soundblaster and soundcards based on the Crystal chipset.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

2.1. How it all fits together.

The Linux AX.25 implementation is a brand new implementation. While in many ways it may looks similar to NOS, or BPQ or other AX.25 implementations, it is none of these and is not identical to any of them. The Linux AX.25 implementation is capable of being configured to behave almost identically to other implementations, but the configuration process is very different.

To assist you in understanding how you need to think when configuring this section describes some of the structural features of the AX.25 implementation and how it fits into the context of the overall Linux structure.

Simplified Protocol Layering Diagram

```
-----------------------------------------------
| AF_AX25 | AF_NETROM | AF_INET | AF_ROSE |
|=========|===========|=============|=========|
| | | | |
| | | TCP/IP | |
```

```
| | ---------- | |
| | NetRom | | Rose |
| ------------------------------------
| AX.25 |
-----------------------------------------
```

This diagram simply illustrates that NetRom, Rose and TCP/IP all run directly on top of AX.25, but that each of these protocols is treated as a seperate protocol at the programming interface. The `AF_' names are simply the names given to the `Address Family' of each of these protocols when writing programs to use them. The important thing to note here is the implicit dependence on the configuration of your AX.25 devices before you can configure your NetRom, Rose or TCP/IP devices.

Software module diagram of Linux Network Implementation

```
-------------------------------------------------------------------------
User | Programs | call node || Daemons | ax25d mheardd
| | pms mheard || | inetd netromd
-------------------------------------------------------------------------
| Sockets | open(), close(), listen(), read(), write(), connect()
| |-----------------------------------------------
| | AF_AX25 | AF_NETROM | AF_ROSE | AF_INET
|---------------------------------------------------------------
Kernel | Protocols | AX.25 | NetRom | Rose | IP/TCP/UDP
|---------------------------------------------------------------
| Devices | ax0,ax1 | nr0,nr1 | rose0,rose1 | eth0,ppp0
|---------------------------------------------------------------
| Drivers | Kiss PI2 PacketTwin SCC BPQ | slip ppp
| | Soundmodem Baycom | ethernet
-------------------------------------------------------------------------
Hardware | PI2 Card, PacketTwin Card, SCC card, Serial port, Ethernet Card
-------------------------------------------------------------------------
```

This diagram is a little more general than the first. This diagram attempts to show the relationship between user applications, the ker- nel and the hardware. It also shows the relationship between the Socket application programming interface, the actual protocol modules, the kernel networking devices and the device drivers. Anything in this diagram is dependent on anything underneath it, and in general you must configure from the bottom of the diagram upwards. So for exam- ple, if you want to run the call program you must also configure the Hardware, then ensure that the kernel has the appropriate device driver, that you create the appropriate network device, that the ker- nel includes the desired protocol that presents a programming inter- face that the call program can use. I have attempted to lay out this document in roughly that order.

3. The AX.25/NetRom/Rose software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. These have been significantly enhanced in the 2.1.* kernels. Unfortunately, the rest of the 2.1.* kernels makes them fairly unstable at the moment and not a good choice for a production system. To solve this problem Jonathon Naylor has prepared a patch kit which will bring the amateur radio protocol support in a 2.0.28 kernel up to the standard of the 2.1.* kernels. This is very simple to apply, and provides a range of facilities not present in the standard kernel such as Rose support.

3.1. Finding the kernel, tools and utility packages.

3.1.1. The kernel source:

The kernel source can be found in its usual place at: ftp.kernel.org

/pub/linux/kernel/v2.0/linux-2.0.31.tar.gz

The current version of the AX25 upgrade patch is available at: ftp.pspt.fi

/pub/linux/ham/ax25/ax25-module-14e.tar.gz

3.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at: ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.33.tar.gz

The latest ipfwadm package can be found at: ftp.xos.nl

/pub/linux/ipfwadm/

3.1.3. The AX25 utilities:

There are two different families of AX25-utilities. One is for the 2.0.* kernels and the other will work with either the 2.1.* kernels or the 2.0.*+moduleXX kernels. The ax25-utils version number indicates the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel. The following are working combinations. You must use one of the following combinations, any other combination will not work, or will not work well.

```
Linux Kernel AX25 Utility set
---------------------- -------------------------
linux-2.0.29 ax25-utils-2.0.12c.tar.gz **
linux-2.0.28+module12 ax25-utils-2.1.22b.tar.gz **
linux-2.0.30+module14c ax25-utils-2.1.42a.tar.gz
linux-2.0.31+module14d ax25-utils-2.1.42a.tar.gz
linux-2.1.22 ++ ax25-utils-2.1.22b.tar.gz
linux-2.1.42 ++ ax25-utils-2.1.42a.tar.gz
```

Note: the ax25-utils-2.0.* series (marked above with the '**' symbol) is now obsolete and is no longer supported. This document covers configuration using the versions of software recommended above the table. While there are differences between the releases, most of the information will be relevant to earlier releases of code.

The AX.25 utility programs can be found at: ftp.pspt.fi <ftp://ftp.pspt.fi/pub/linux/ham/ax25/>

or at: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

4. Installing the AX.25/NetRom/Rose software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

4.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.31.tar.gz
# tar xvfz /pub/net/ax25/ax25-module-14e.tar.gz
# patch -p0 </usr/src/ax25-module-14/ax25-2.0.31-2.1.47-2.diff
# cd linux
```

After you have unpacked the kernel source and applied the upgrade, you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make menuconfig
```

You might also try:

```
# make config
```

I'm going to describe the full screen method (menuconfig) because it is easier to move around, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

```
The options most relevant to an AX.25 configuration are:

Code maturity level options --->
...
[*] Prompt for development and/or incomplete code/drivers
...
General setup --->
...
[*] Networking support
...
Networking options --->
...
[*] TCP/IP networking
[?] IP: forwarding/gatewaying
...
[?] IP: tunneling
...
[?] IP: Allow large windows (not recommended if <16Mb of memory)
...
[*] Amateur Radio AX.25 Level 2
[?] Amateur Radio NET/ROM
[?] Amateur Radio X.25 PLP (Rose)
...
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[?] BAYCOM ser12 and par96 driver for AX.25
[?] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
[?] Serial port KISS driver for AX.25
[?] BPQ Ethernet driver for AX.25
[?] Gracilis PackeTwin support for AX.25
[?] Ottawa PI and PI/2 support for AX.25
[?] Z8530 SCC KISS emulation driver for AX.25
...

The options I have flagged with a `*' are those that you must must
answer `Y' to. The rest are dependent on what hardware you have and
what other options you want to include. Some of these options are
described in more detail later on, so if you don't know what you want
yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able
to cleanly compile your new kernel:

# make dep
# make clean
```

```
# make zImage
```

maake sure you move your arch/i386/boot/zImage file wherever you want it and then edit your /etc/lilo.conf file and rerun lilo to ensure that you actually boot from it.

4.1.1. A word about Kernel modules

I recommend that you don't compile any of the drivers as modules. In nearly all installations you gain nothing but additional complexity. Many people have problems trying to get the modularised components working, not because the software is faulty but because modules are more complicated to install and configure.

If you've chosen to compile any of the components as modules, then you'll also need to use:

```
# make modules
# make modules_install
```

to install your modules in the appropriate location.

You will also need to add some entries into your /etc/conf.modules file that will ensure that the kerneld program knows how to handle the kernel modules. You should add/modify the following:

```
alias net-pf-3 ax25
alias net-pf-6 netrom
alias net-pf-11 rose
alias tty-ldisc-1 slip
alias tty-ldisc-3 ppp
alias tty-ldisc-5 mkiss
alias bc0 baycom
alias nr0 netrom
alias pi0a pi2
alias pt0a pt
alias scc0 optoscc (or one of the other scc drivers)
alias sm0 soundmodem
alias tunl0 newtunnel
alias char-major-4 serial
alias char-major-5 serial
alias char-major-6 lp
```

4.1.2. What's new in 2.0.*+ModuleXX or 2.1.* Kernels ?

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler. That being said, it also makes configuration slightly more difficult.

All drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin
etc now present a normal network interface, that is they now
look like the ethernet driver does, they no longer look like
KISS TNC's. A new utility called net2kiss allows you to build a
kiss interface to these devices if you wish.
bug fixed
there have been many bug fixes and new features added to the
drivers and protocols. The Rose protocol is one important
addition.

4.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new
network configuration tools. These tools allow you to modify the
configuration of network devices and to add routes to the routing
table.

The new alpha release of the standard net-tools package includes
support for AX.25 and NetRom support. I've tested this and it seems to
work well for me.

4.2.1. A patch kit that adds Rose support and fixes some bugs.

The standard net-tools-1.33.tar.gz package has some small bugs that
affect the AX.25 and NetRom support. I've made a small patch kit that
corrects these and adds Rose support to the tools as well.

You can get the patch from: zone.pspt.fi
<ftp://zone.pspt.fi/pub/linux/ham/ax25/net-
tools-1.33.rose.tjd.diff.gz>.

4.2.2. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.33.tar.gz
# zcat net-tools-1.33.rose.tjd.diff.gz | patch -p0
# cd net-tools-1.33
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

When the compilation is complete, you should use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

4.3. The AX.25 user and utility programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.1.42a.tar.gz
# cd ax25-utils-2.1.42a
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If this is a first time installation, that is you've never installed
any ax25 utilities on your machine before you should also use the:

```
# make installconf
```

command to install some sample configuration files into the /etc/ax25/
directory from which to work.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package
properly installed on your system. The configuration script attempts
to locate your ncurses packages in the common locations, but some
installations have ncurses badly installed and it is unable to locate
them.
5. A note on callsigns, addresses and things before we start.

Each AX.25 and NetRom port on your system must have a callsign/ssid
allocated to it. These are configured in the configuration files that

will be described in detail later on.

Some AX.25 implementations such as NOS and BPQ will allow you to configure the same callsign/ssid on each AX.25 and NetRom port. For somewhat complicated technical reasons Linux does not allow this. This isn't as big a problem in practise as it might seem.

This means that there are things you should be aware of and take into consideration when doing your configurations.

1. Each AX.25 and NetRom port must be configured with a unique callsign/ssid.

2. TCP/IP will use the callsign/ssid of the AX.25 port it is being transmitted or received by, ie the one you configured for the AX.25 interface in point 1.

3. NetRom will use the callsign/ssid specified for it in its configuration file, but this callsign is only used when your NetRom is speaking to another NetRom, this is not the callsign/ssid that AX.25 users who wish to use your NetRom `node' will use. More on this later.

4. Rose will, by default, use the callsign/ssid of the AX.25 port, unless the Rose callsign has been specifically set using the `rsparms' command. If you set a callsign/ssid using the `rsparms' command then Rose will use this callsign/ssid on all ports.

5. Other programs, such as the `ax25d' program can listen using any callsign/ssid that they wish and these may be duplicated across different ports.

6. If you are careful with routing you can configure the same IP address on all ports if you wish.

5.1. What are all those T1, T2, N2 and things ?

Not every AX.25 implementation is a TNC2. Linux uses nomenclature that differs in some respects from that you will be used to if your sole experience with packet is a TNC. The following table should help you interpret what each of the configurable items are, so that when you come across them later in this text you'll understand what they mean.

Linux	TAPR TNC	Description
T1	FRACK	How long to wait before retransmitting an unacknowledged frame.
T2	RESPTIME	The minimum amount of time to wait for another frame to be received before transmitting an acknowledgement.
T3	CHECK	The period of time we wait between sending

| | a check that the link is still active.

N2 | RETRY | How many times to retransmit a frame before
| | assuming the connection has failed.

Idle | | The period of time a connection can be idle
| | before we close it down.

Window | MAXFRAME | The maximum number of unacknowledged
| | transmitted frames.

5.2. Run time configurable parameters

The 2.1.* and 2.0.* +moduleXX kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port.

The structure of the files in /proc/sys/net/ax25/<portname>/ is as follows:

FileName Meaning Values Default
ip_default_mode IP Default Mode 0=DG 1=VC 0
ax25_default_mode AX.25 Default Mode 0=Normal 1=Extended 0
backoff_type Backoff 0=Linear 1=Exponential 1
connect_mode Connected Mode 0=No 1=Yes 1
standard_window_size Standard Window 1 <= N <= 7 2
extended_window_size Extended Window 1 <= N <= 63 32
t1_timeout T1 Timeout 1s <= N <= 30s 10s
t2_timeout T2 Timeout 1s <= N <= 20s 3s
t3_timeout T3 Timeout 0s <= N <= 3600s 300s
idle_timeout Idle Timeout 0m <= N 20m
maximum_retry_count N2 1 <= N <= 31 10
maximum_packet_length AX.25 Frame Length 1 <= N <= 512 256

In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

The structure of the files in /proc/sys/net/netrom/ is as follows:

FileName Values Default
default_path_quality 10
link_fails_count 2
network_ttl_initialiser 16

```
obsolescence_count_initialiser 6
routing_control 1
transport_acknowledge_delay 50
transport_busy_delay 1800
transport_maximum_tries 3
transport_requested_window_size 4
transport_timeout 1200
```

The structure of the files in /proc/sys/net/rose/ is as follows:

```
FileName Values Default
acknowledge_hold_back_timeout 50
call_request_timeout 2000
clear_request_timeout 1800
link_fail_timeout 1200
maximum_virtual_circuits 50
reset_request_timeout 1800
restart_request_timeout 1800
routing_control 1
window_size 3
```

To set a parameter all you need to do is write the desired value to the file itself, for example to check and set the Rose window size you'd use something like:

```
# cat /proc/sys/net/rose/window_size
3
# echo 4 >/proc/sys/net/rose/window_size
# cat /proc/sys/net/rose/window_size
4
```

6. Configuring an AX.25 port.

Each of the AX.25 applications read a particular configuration file to obtain the parameters for the various AX.25 ports configured on your Linux machine. For AX.25 ports the file that is read is the /etc/ax25/axport file. You must have an entry in this file for each AX.25 port you want on your system.

6.1. Creating the AX.25 network device.

The network device is what is listed when you use the `ifconfig' command. This is the object that the Linux kernel sends and receives network data from. Nearly always the network device has a physical port associated with it, but there are occasions where this isn't necessary. The network device does relate directly to a device driver.

In the Linux AX.25 code there are a number of device drivers. The most common is probably the KISS driver, but others are the SCC driver(s), the Baycom driver and the SoundModem driver.
Each of these device drivers will create a network device when it is started.

6.1.1. Creating a KISS device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Serial port KISS driver for AX.25
```

Probably the most common configuration will be for a KISS TNC on a serial port. You will need to have the TNC preconfigured and connected to your serial port. You can use a communications program like minicom or seyon to configure the TNC into kiss mode.

To create a KISS device you use the kissattach program. In it simplest form you can use the kissattach program as follows:

```
# /usr/sbin/kissattach /dev/ttyS0 radio
# kissparms -p radio -t 100 -s 100 -r 25
```

The kissattach command will create a KISS network device. These devices are called `ax[0-9]'. The first time you use the kissattach command it creates `ax0', the second time it creates `ax1' etc. Each KISS device has an associated serial port.

The kissparms command allows you to set various KISS parameters on a KISS device.

Specifically the example presented would create a KISS network device using the serial device `/dev/ttyS0' and the entry from the /etc/ax25/axports with a port name of `radio'. It then configures it with a txdelay and slottime of 100 milliseconds and a ppersist value of 25.

Please refer to the man pages for more information.

6.1.1.1. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you to make use of both modems on a dual port TNC. Configuration is fairly simple. It works by taking a single serial device connected to a single multiport TNC and making it look like a number of devices each connected to a single port TNC. You do this before you do any of the AX.25 configuration. The devices that you then do the AX.25 configuration on are pseudo-TTY interfaces, (/dev/ttyq*), and not the actual serial device. Pseudo-TTY devices create a kind of pipe through which programs designed to talk to tty devices can talk to other programs designed to talk to tty devices. Each pipe has a master and a slave end. The master end is generally called `/dev/ptyq*' and the slave ends are called `/dev/ttyq*'. There is a one to one relationship between masters and slaves, so /dev/ptyq0 is the master end of a pipe with /dev/ttyq0 as its slave. You must open the master end of a pipe

before opening the slave end. mkiss exploits this mechanism to split a single serial device into seperate devices.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyq0 /dev/ptyq1
# /usr/sbin/kissattach /dev/ttyq0 port1
# /usr/sbin/kissattach /dev/ttyq1 port2
```

would create two pseudo-tty devices that each look like a normal single port TNC. You would then treat /dev/ttyq0 and /dev/ttyq1 just as you would a conventional serial device with TNC connected. This means you'd then use the kissattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use kissattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

6.1.2. Creating a Baycom device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BAYCOM ser12 and par96 driver for AX.25
```

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced PicPar parallel port modems. Further information about the modems themselves may be obtained from the Baycom Web site <http://www.baycom.de/>.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The BayCom driver creates network devices called: bc0, bc1, bc2 etc. when it is configured.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod hdlcdrv
# insmod baycom mode="ser12*" iobase=0x3f8 irq=4
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod hdlcdrv
# insmod baycom mode="par96" iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the Baycom module using:

```
# insmod hdlcdrv
# insmod baycom
```

or that you compiled the kernel with the driver inbuilt.

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

```
# sethdlc -p -i bc0 mode par96 io 0x378 irq 7
```

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

```
# sethdlc -p -i bc1 mode "ser12*" io 0x3f8 irq 4
```

6.1.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 200 mS, SlotTime of 100 mS, PPersist of 40 and half duplex:

```
# sethdlc -i bc0 -a txd 200 slot 100 ppersist 40 half
```

Note that the timing values are in milliseconds.

6.1.3.1. Configuring the Kernel AX.25 to use the BayCom device

The BayCom driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig bc0 hw ax25 VK2KTJ-15 up
```

will assign the BayCom device bc0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, you'll still need to use the ifconfig command to bring the device up though:

```
# ifconfig bc0 up
# axparms -setcall bc0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the BayCom device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.4. Creating a SoundModem device.

Kernel Compile Options:

```
Code maturity level options --->
[*] Prompt for development and/or incomplete code/drivers
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Soundcard modem driver for AX.25
[?] Soundmodem support for Soundblaster and compatible cards
[?] Soundmodem support for WSS and Crystal cards
[?] Soundmodem support for 1200 baud AFSK modulation
[?] Soundmodem support for 4800 baud HAPN-1 modulation
[?] Soundmodem support for 9600 baud FSK G3RUH modulation
```

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.

The driver currently emulates 1200 bps AFSK, 4800 HAPN and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

6.1.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal' that may be used for SoundCards based on the Crystal chipset. If you have some other card then you will have to use some other software to initialise it. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:
setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

6.1.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.

For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

```
# insmod hdlcdrv
# insmod soundmodem mode="sbc:afsk1200" iobase=0x220 irq=5 dma=1
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

```
# insmod hdlcdrv
# insmod soundmodem
```

or that you compiled the kernel with the driver inbuilt.

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 4800 bps HAPN modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:hapn4800 io 0x388 irq 10 dma 1 serio 0x2f8
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
```

6.1.4.3. Configuring the AX.25 channel access parameters.

The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. You use the sethdlc utility for this as well.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 100 slot 50 ppersist 128 full
```

Note that the timing values are in milliseconds.

6.1.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

6.1.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The ifconfig utility may be used to perform this.

```
# /sbin/ifconfig sm0 hw ax25 VK2KTJ-15 up
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-15. Alternatively you can use the axparms command, but you still need the ifconfig utility to bring the device up:

```
# ifconfig sm0 up
# axparms -setcall sm0 vk2ktj-15
```

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other. You can configure it for TCP/IP, add it to ax25d and run NetRom or Rose over it as you please.

6.1.5. Creating a PI card device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Ottawa PI and PI/2 support for AX.25
```

The PI card device driver creates devices named `pi[0-9][ab]'. The first PI card detected will be allocated `pi0', the second `pi1' etc. The `a' and `b' refer to the first and second physical interface on the PI card. If you have built your kernel to include the PI card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pi0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PI card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu>

6.1.6. Creating a PacketTwin device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Gracilis PackeTwin support for AX.25
```

The PacketTwin card device driver creates devices named `pt[0-9][ab]'. The first PacketTwin card detected will be allocated `pt0', the second `pt1' etc. The `a' and `b' refer to the first and second physical interface on the PacketTwin card. If you have built your kernel to include the PacketTwin card driver, and the card has been properly detected then you can use the following command to configure the network device:

```
# /sbin/ifconfig pt0a hw ax25 VK2KTJ-15 up
```

This command would configure the first port on the first PacketTwin card detected with the callsign VK2KTJ-15 and make it active. To use the device all you now need to do is to configure an entry into your /etc/ax25/axports file with a matching callsign/ssid and you will be ready to continue on.

The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>.

6.1.7. Creating a generic SCC device.

Kernel Compile Options:

```
General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] Z8530 SCC KISS emulation driver for AX.25
```

Joerg Reuter, DL1BKE, jreuter@poboxes.com has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

6.1.7.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

Joerg's web page <http://www.rat.de/jr/>

or:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following commands were what I used to compile and install the package for kernel version 2.0.30:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0-scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

6.1.7.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

6.1.7.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may

specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card
PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

```
chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM
```

PA0HZP SCC card

```
chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

6.1.7.3. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

6.1.7.4. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

kissattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

- --- BEGIN Linux AX25 HOWTO part 3/3 ---

21.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for TCP/IP encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.

. . . . . .
--- .
| Network /---------\ . Network
| 154.27.3/24 | | . 44.136.16/24 \ | /
| | Linux | . \|/
| | | . |
| eth0 | IPIP | . /-----\ /----------\ |
---|---------------| |-----| TNC |----| Radio |---/
| 154.27.3.20 | Gateway | . \-----/ \----------/
| | | sl0
| | | 44.136.16.1
| | | .
| | | .
| \_________/ .
--- . . . . . .

The configuration files of interest are:

# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
```

```
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
kissattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"
```

```
echo "#"
echo "# remote routes"

fgrep encap | grep "^route" | grep -v " XXX.XXX.XXX.XXX" | \
awk '{
split($3, s, "/")
split(s[1], n,".")
if (n[1] == "") n[1]="0"

echo "# the end"
```

21.3. AXIP encapsulated gateway configuration

Many Amateur Radio Internet gateways encapsulate AX.25, NetRom and Rose in addition to tcp/ip. Encapsulation of AX.25 frames within IP datagrams is described in RFC-1226 by Brian Kantor. Mike Westerhof wrote an implementation of an AX.25 encapsulation daemon for unix in 1991. The ax25-utils package includes a marginally enhanced version of it for Linux.

An AXIP encapsulation program accepts AX.25 frames at one end, looks at the destination AX.25 address to determine what IP address to send them to, encapsulates them in a tcp/ip datagram and then transmits them to the appropriate remote destination. It also accepts tcp/ip datagrams that contain AX.25 frames, unwraps them and processes them as if it had received them directly from an AX.25 port. To distinguish IP datagrams containing AX.25 frames from other IP datagrams which don't, AXIP datagrams are coded with a protocol id of 4 (or 94 which is now deprecated). This process is described in RFC-1226.

The ax25ipd program included in the ax25-utils package presents itself as a program supporting a KISS interface across which you pass AX.25 frames, and an interface into the tcp/ip protocols. It is configured with a single configuration file called /etc/ax25/ax25ipd.conf.

21.3.1. AXIP configuration options.

The ax25ipd program has two major modes of operation. "digipeater" mode and "tnc" mode. In "tnc" mode the daemon is treated as though it were a kiss TNC, you pass KISS encapsulated frames to it and it will transmit them, this is the usual configuration. In "digipeater" mode, you treat the daemon as though it were an AX.25 digipeater. There are subtle differences between these modes.

In the configuration file you configure "routes" or mappings between destination AX.25 callsigns and the IP addresses of the hosts that you want to send the AX.25 packets too. Each route has options which will be explained later.
Other options that are configured here are

the tty that the ax25ipd daemon will open and its speed (usually one end of a pipe)

what callsign you want to use in "digipeater" mode

beacon interval and text

whether you want to encapsulate the AX.25 frames in IP datagrams or in UDP/IP datagrams. Nearly all AXIP gateways use IP encapsulation, but some gateways are behind firewalls that will not allow IP with the

AXIP protocol id to pass and are forced to use UDP/IP. Whatever you choose must match what the tcp/ip host at the other end of the link is using.

21.3.2. A typical /etc/ax25/ax25ipd.conf file.

```
#
# ax25ipd configuration file for station floyd.vk5xxx.ampr.org
#
# Select axip transport. 'ip' is what you want for compatibility
# with most other gateways.
#
socket ip
#
# Set ax25ipd mode of operation. (digi or tnc)
#
mode tnc
#
# If you selected digi, you must define a callsign. If you selected
# tnc mode, the callsign is currently optional, but this may change
# in the future! (2 calls if using dual port kiss)
#
#mycall vk5xxx-4
#mycall2 vk5xxx-5
#
# In digi mode, you may use an alias. (2 for dual port)
#
#myalias svwdns
#myalias2 svwdn2
#
# Send an ident every 540 seconds ...
#
#beacon after 540
#btext ax25ip -- tncmode rob/vk5xxx -- Experimental AXIP gateway
#
# Serial port, or pipe connected to a kissattach in my case
#
device /dev/ttyq0
#
# Set the device speed
#
speed 9600
#
# loglevel 0 - no output
# loglevel 1 - config info only
# loglevel 2 - major events and errors
# loglevel 3 - major events, errors, and AX25 frame trace
# loglevel 4 - all events
# log 0 for the moment, syslog not working yet ...
#
loglevel 2
```

```
#
# If we are in digi mode, we might have a real tnc here, so use param to
# set the tnc parameters ...
#
#param 1 20
#
# Broadcast Address definition. Any of the addresses listed will be forwarded
# to any of the routes flagged as broadcast capable routes.
#
broadcast QST-0 NODES-0
#
# ax.25 route definition, define as many as you need.
# format is route (call/wildcard) (ip host at destination)
# ssid of 0 routes all ssid's
#
# route <destcall> <destaddr> [flags]
#
# Valid flags are:
# b - allow broadcasts to be transmitted via this route
# d - this route is the default route
#
route vk2sut-0 44.136.8.68 b
route vk5xxx 44.136.188.221 b
route vk2abc 44.1.1.1
#
#
```

21.3.3. Running ax25ipd

Create your /etc/ax25/axports entry:

```
# /etc/ax25/axports
#
axip VK2KTJ-13 9600 256 AXIP port
#
```

Run the kissattach command to create that port:

```
/usr/sbin/kissattach /dev/ptyq0 axip
```

Run the ax25ipd program:

```
/usr/sbin/ax25ipd &
```

Test the AXIP link:

```
call axip vk5xxx
```

21.3.4. Some notes about the routes and route flags

The "route" command is where you specify where you want your AX.25 packets encapsulated and sent to. When the ax25ipd daemon receives a packet from its interface, it compares the destination callsign with each of the callsigns in its routing table. If if finds a match then

the ax.25 packet is encapsulated in an IP datagram and then transmitted to the host at the specified IP address.

There are two flags you can add to any of the route commands in the ax25ipd.conf file. The two flags are:

b traffic with a destination address matching any of those on the list defined by the "broadcast" keyword should be transmitted via this route.

d any packets not matching any route should be transmitted via this route.

The broadcast flag is very useful, as it enables informations that is normally destined for all stations to a number of AXIP destinations. Normally axip routes are point-to-point and unable to handle 'broadcast' packets.

21.4. Linking NOS and Linux using a pipe device

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users via NOS.

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyq[1-f] and the slave end of the pipes are known as: ttyq[1-f]. Remember they come in pairs, so if you select /dev/ptyqf as your master end then you must use /dev/ttyqf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program,

as the Linux kernel starts first and the master end of the pipe must
be opened first. You must also remember that your Linux kernel must
have a different IP address to your NOS, so you will need to allocate
a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to
create the slip link from your linux kernel you can use commands
similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptyqf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88
and the NOS program is using IP address 44.70.248.67. The route
command in the last line simply tells your linux kernel to route all
datagrams for the amprnet via the slip link created by the slattach
command. Normally you would put these commands into your
/etc/rc.d/rc.inet2 file after all your other network configuration is
complete so that the slip link is created automatically when you
reboot. Note: there is no advantage in using cslip instead of slip as
it actually reduces performance because the link is only a virtual one
and occurs fast enough that having to compress the headers first takes
longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttyqf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end
of the pipe device pair to your linux kernel, and a route to it to
make it work. When you have started NOS you should be able to ping and
telnet to your NOS from your Linux machine and vice versa. If not,
double check that you have made no mistakes especially that you have
the addresses configured properly and have the pipe devices around the
right way.

22. Where do I find more information about .... ?

Since this document assumes you already have some experience with
packet radio and that this might not be the case I've collected a set
of references to other information that you might find useful.

22.1. Packet Radio

You can get general information about Packet Radio from these sites:

American Radio Relay League <http://www.arrl.org/>,

Radio Amateur Teleprinter Society <http://www.rats.org/>

Tucson Amateur Packet Radio Group <http://www.tapr.org/>

22.2. Protocol Documentation

AX.25, NetRom - Jonathon Naylor has collated a variety of documents that relate to the packet radio protocols themselves. This documentation has been packaged up into ax25-doc-1.0.tar.gz <ftp://ftp.pspt.fi/pub/ham/linux/ax25/ax25-doc-1.0.tar.gz>

22.3. Hardware Documentation

Information on the PI2 Card is provided by the Ottawa Packet Radio Group <http://hydra.carleton.ca/>.

Information on Baycom hardware is available at the Baycom Web Page <http://www.baycom.de/>.

23. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio TCP/IP discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which TCP/IP is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

24. Acknowledgements.

The following people have contributed to this document in one way or another, knowingly or unknowingly. In no particular order (as I find them): Jonathon Naylor, Thomas Sailer, Joerg Reuter, Ron Atkinson, Alan Cox, Craig Small, John Tanner, Brandon Allbery, Hans Alblas, Klaus Kudielka, Carl Makin.

25. Copyright.

attach asy scc0 0 ax25 scc0 256 256 4800

6.1.7.5. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program
to display the current configuration of an SCC device. To use it try:

# sccstat /dev/scc0

you will displayed a very large amount of information relating to the
configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration
after you have booted. Its syntax is very similar to the NOS param
command, so to set the txtail setting of a device to 100mS you would
use:

# sccparam /dev/scc0 txtail 0x8

6.1.8. Creating a BPQ ethernet device.

Kernel Compile Options:

General setup --->
[*] Networking support
Network device support --->
[*] Network device support
...
[*] Radio network interfaces
[*] BPQ Ethernet driver for AX.25

Linux supports BPQ Ethernet compatibility. This enables you to run the
AX.25 protocol over your Ethernet LAN and to interwork your linux
machine with other BPQ machines on the LAN.

The BPQ network devices are named `bpq[0-9]'. The `bpq0' device is
associated with the `eth0' device, the `bpq1' device with the `eth1'
```

device etc.

Configuration is quite straightforward. You firstly must have
configured a standard Ethernet device. This means you will have
compiled your kernel to support your Ethernet card and tested that
this works. Refer to the Ethernet-HOWTO <Ethernet-HOWTO.html> for more
information on how to do this.

To configure the BPQ support you need to configure the Ethernet device
with an AX.25 callsign. The following command will do this for you:

/sbin/ifconfig bpq0 hw ax25 vk2ktj-14 up

Again, remember that the callsign you specify should match the entry
in the /etc/ax25/axports file that you wish to use for this port.

6.1.9. Configuring the BPQ Node to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux
implementation does not, and instead it uses the normal Ethernet
broadcast address. The NET.CFG file for the BPQ ODI driver should
therefore be modifified to look similar to this:

LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address

6.2. Creating the /etc/ax25/axports file.

The /etc/ax25/axports is a simple text file that you create with a
text editor. The format of the /etc/ax25/axports file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-15 4800 256 2 4800bps 144.800 MHz
ether VK2KTJ-14 10000000 256 2 BPQ/ethernet device

Remember, you must assign unique callsign/ssid to each AX.25 port you
create. Create one entry for each AX.25 device you want to use, this
includes KISS, Baycom, SCC, PI, PT and SoundModem ports. Each entry
here will describe exactly one AX.25 network device. The entries in
this file are associated with the network devices by the
callsign/ssid. This is at least one good reason for requiring unique
callsign/ssid.

6.3. Configuring AX.25 routing.

You may wish to configure default digipeaters paths for specific
hosts. This is useful for both normal AX.25 connections and also IP
based connections. The axparms command enables you to do this. Again,
the man page offers a complete description, but a simple example might
be:

/usr/sbin/axparms -route add radio VK2XLZ VK2SUT

This command would set a digipeater entry for VK2XLZ via VK2SUT on the
AX.25 port named radio.

7. Configuring an AX.25 interface for TCP/IP.

It is very simple to configure an AX.25 port to carry TCP/IP. If you
have KISS interfaces then there are two methods for configuring an IP
address. The kissattach command has an option that allows you to do
specify an IP address. The more conventional method using the ifconfig
command will work on all interface types.

So, modifying the previous KISS example:

/usr/sbin/kissattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
/sbin/route add -net 44.136.8.0 netmask 255.255.255.0 ax0
/sbin/route add default ax0

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

If you have any other interface type then you use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other TCP/IP interface. The following example is for a PI card device, but would work equally well for any other AX.25 network device:

```
# /sbin/ifconfig pi0a 44.136.8.5 netmask 255.255.255.0 up
# /sbin/ifconfig pi0a broadcast 44.136.8.255 mtu 512
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other TCP/IP software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring a NetRom port.

The NetRom protocol relies on, and uses the AX.25 ports you have created. The NetRom protocol rides on top of the AX.25 protocol. To configure NetRom on an AX.25 interface you must configure two files. One file describes the Netrom interfaces, and the other file describes which of the AX.25 ports will carry NetRom. You can configure multiple NetRom ports, each with its own callsign and alias, the same procedure applies for each.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom ports in much the same way as the /etc/ax25/axports file describes the AX.25 ports. Each NetRom device you wish to create must have an entry in the /etc/ax25/nrports file. Normally a Linux machine would have only one NetRom device configured that would use a number of the AX.25 ports defined. In some situations you might wish a special service such as a BBS to have a seperate NetRom alias and so you would create more than one.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use. Note, this is not that address that users should connect to to get access to a node style interface. (The node program is covered later). This callsign/ssid should be unique and should not appear elsewhere in either of the /etc/ax25/axports or the /etc/ax25/nrports files.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 236 Linux Switch Port

This example creates a NetRom port known to the rest of the NetRom network as `LINUX:VK2KTJ-9'.

This file is used by programs such as the call program.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file. This file may contain a number of entries. There would normally be one entry for each AX.25 port that you wish to allow NetRom traffic on.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If you do not have an entry in /etc/ax25/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 100 1

8.3. Creating the NetRom Network device

When you have the two configuration files completed you must create the NetRom device in much the same way as you did for the AX.25 devices. This time you use the nrattach command. The nrattach works in just the same way as the axattach command except that it creates NetRom network devices called `nr[0-9]'. Again, the first time you use the nrattach command it creates the `nr0' device, the second time it creates the `nr1' network devices etc. To create the network device for the NetRom port we've defined we would use:

nrattach netrom

This command would start the NetRom device (nr0) named netrom configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The Linux kernel does all of the NetRom protocol and switching, but does not manage some functions. The NetRom daemon manages the NetRom routing tables and generates the NetRom routing broadcasts. You start NetRom daemon with the command:

/usr/sbin/netromd -i

You should soon see the /proc/net/nr_neigh file filling up with information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that it is started automatically each time you reboot.

8.5. Configuring NetRom routing.

You may wish to configure static NetRom routes for specific hosts. The nrparms command enables you to do this. Again, the man page offers a complete description, but a simple example might be:

/usr/sbin/nrparms -nodes VK2XLZ-10 + #MINTO 120 5 radio VK2SUT-9

This command would set a NetRom route to #MINTO:VK2XLZ-10 via a neighbour VK2SUT-9 on my AX.25 port called `radio'.

You can manually create entries for new neighbours using the nrparms command as well. For example:

/usr/sbin/nrparms -routes radio VK2SUT-9 + 120

This command would create VK2SUT-9 as a NetRom neighbour with a quality of 120 and this will be locked and will not be deleted automatically.

9. Configuring a NetRom interface for TCP/IP.

Configuring a NetRom interface for TCP/IP is almost identical to configuring an AX.25 interface for TCP/IP.

Again you can either specify the ip address and mtu on the nrattach command line, or use the ifconfig and route commands, but you need to manually add arp entries for hosts you wish to route to because there is no mechanism available for your machine to learn what NetRom address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu of 512 and configured with the details from the /etc/ax25/nrports file for a NetRom port named netrom you would use:

```
# /usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# /usr/sbin/nrattach netrom
# ifconfig nr0 44.136.8.5 netmask 255.255.255.0 hw netrom VK2KTJ-9
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring a Rose port.

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation <http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

The Rose packet layer protocol protocol relies on, and uses the AX.25 ports you have created. The Rose protocol rides on top of the AX.25 protocol. To configure Rose you must create a configuration file that describes the Rose ports you want. You can create multiple Rose ports if you wish, the same procedure applies for each.

10.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the
/etc/ax25/rsports file. This file describes the Rose port in much the
same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050294760 Rose Port

Note that Rose will use the default callsign/ssid configured on each
AX.25 port unless you specify otherwise.

To configure a seperate callsign/ssid for Rose to use on each port you
use the rsparms command as follows:

/usr/sbin/rsprams -call VK2KTJ-10

This example would make Linux listen for and use the callsign/ssid
VK2KTJ-10 on all of the configured AX.25 ports for Rose calls.

10.2. Creating the Rose Network device.

When you have created the /etc/ax25/rsports file you may create the
Rose device in much the same way as you did for the AX.25 devices.
This time you use the rsattach command. The rsattach command creates
network devices named `rose[0-5]'. The first time you use the rsattach
command it create the `rose0' device, the second time it creates the
`rose1' device etc. For example:

rsattach rose

This command would start the Rose device (rose0) configured with the
details specified in the /etc/ax25/rsports file for the entry named
`rose'.

10.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms
utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named `radio' in your /etc/ax25/axports file to a neighbour with the call-sign VK2XLZ.

You may specify a route with a mask to capture a number of Rose destinations into a single routing entry. The syntax looks like:

```
# rsparms -nodes add 5050295502/4 radio vk2xlz
```

which would be identical to the previous example except that it would match any destination address that matched the first four digits supplied, in this case any address commencing with the digits 5050. An alternate form for this command is:

```
# rsparms -nodes add 5050/4 radio vk2xlz
```

which is probably the less ambiguous form.

11. Making AX.25/NetRom/Rose calls.

Now that you have all of your AX.25, NetRom and Rose interfaces configured and active, you should be able to make test calls.

The AX25 Utilities package includes a program called `call' which is a splitscreen terminal program for AX.25, NetRom and Rose.

A simple AX.25 call would look like:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

A simple NetRom call to a node with an alias of SUNBBS would look like:

```
/usr/bin/call netrom SUNBBS
```

A simple Rose call to HEARD at node 5050882960 would look like:

```
/usr/bin/call rose HEARD 5050882960
```

Note: you must tell call which port you wish to make the call on, as the same destination node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

12. Configuring Linux to accept Packet connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25, NetRom or Rose connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they

connect?". People are developing neat little applications that may be used to provide services to callers, a simple example is the pms program included in the AX25 utilities, a more complex example is the node program also included in the AX25 utilities. Alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

The ax25d program is similar to the inetd program commonly used to accept incoming TCP/IP connections on unix machines. It sits and listens for incoming connections, when it detects one it goes away and checks a configuration file to determine what program to run and connect to that connection. Since this the standard tool for accepting incoming AX.25, NetRom and Rose connections I'll describe how to configure it.

12.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25, NetRom and Rose connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The general format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[port_name] || <port_name> || {port_name}
<peer1> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
parameters window T1 T2 T3 idle N2 <mode>
<peer3> window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
...
default window T1 T2 T3 idle N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<port_name>
is the name of the AX.25, NetRom or Rose port as specified in the /etc/ax25/axports, /etc/ax25/nrports and /etc/ax25/rsports files. The name of the port is surrounded by the `[]' brackets if it is an AX.25 port, the `<>' brackets if it is a NetRom port, or the `{}' brackets if it is a Rose port. There is an alternate form for this field, and that is use prefix the port name with `callsign/ssid via' to indicate that you wish accept calls to the callsign/ssid via this interface. The example

should more clearly illustrate this.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

idle
is the idle timer value in seconds.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Validate call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it
is run. You pass useful information into these arguments by use
of the following tokens:

%d Name of the port the connection was received on.

%U AX.25 callsign of the connected party without the SSID, in
uppercase.

%u AX.25 callsign of the connected party without the SSID, in
lowercase.

%S AX.25 callsign of the connected party with the SSID, in
uppercase.

%s AX.25 callsign of the connected party with the SSID, in
lowercase.

%P AX.25 callsign of the remote node that the connection came in
from without the SSID, in uppercase.

%p AX.25 callsign of the remote node that the connection came in
from without the SSID, in lowercase.

%R AX.25 callsign of the remote node that the connection came in
from with the SSID, in uppercase.

%r AX.25 callsign of the remote node that the connection came in
from with the SSID, in lowercase.

You need one section in the above format for each AX.25, NetRom or
Rose interface you want to accept incoming AX.25, NetRom or Rose
connections on.

There are two special lines in the paragraph, one starts with the
string `parameters' and the other starts with the string `default'
(yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a
catch-all, so that any incoming connection on the <interface_call>
interface that doesn't have a specific rule will match the `default'
rule. If you don't have a `default' rule, then any connections not

matching any specific rule will be disconnected immediately without notice.

The `parameters' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `parameters' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any using the `parameters' entry. The trap is that the these defaults apply only to those rules below the `parameters' line, not to those above. You may have more than one `parameters' rule per interface definition, and in this way you may create groups of default configurations. It is important to note that the `parameters' rule does not allow you to set the `uid' or `command' fields.

12.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 02/03/97
# This configuration uses the AX.25 port defined earlier.

# <peer> Win T1 T2 T3 idl N2 <mode> <uid> <exec> <argv[0]>[<args....>]

[VK2KTJ-0 via radio]
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

[VK2KTJ-1 via radio]
default * * * * * 0 root /usr/sbin/node node

<netrom>
parameters 1 10 * * * * *
NOCALL * * * * * * L
default * * * * * * 0 root /usr/sbin/node node

{VK2KTJ-0 via rose}
parameters 1 10 * * * * *
VK2XLZ * * * * * * * root /usr/sbin/axspawn axspawn %u +
VK2DAY * * * * * * * root /usr/sbin/axspawn axspawn %u +
NOCALL * * * * * * L
default 1 10 5 100 180 5 * root /usr/sbin/pms pms -a -o vk2ktj

{VK2KTJ-1 via rose}
default * * * * * 0 root /usr/sbin/node node radio
```

This example says that anybody attempting to connect to the callsign `VK2KTJ-0' heard on the AX.25 port called `radio' will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should be locked out, note the use of mode `L'.

The parameters line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines provide definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection, and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

The next configuration accepts calls to VK2KTJ-1 via the radio port. It runs the node program for everybody that connects to it.

The next configuration is a NetRom configuration, note the use of the greater-then and less-than braces instead of the square brackets. These denote a NetRom configuration. This configuration is simpler, it simply says that anyone connecting to our NetRom port called `netrom' will have the node program run for them, unless they have a callsign of `NOCALL' in which case they will be locked out.

The last two configurations are for incoming Rose connections. The first for people who have placed calls to `vk2ktj-0' and the second for `VK2KTJ-1 at the our Rose node address. These work precisely the same way. Not the use of the curly braces to distinguish the port as a Rose port.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. The configuration file is explained fully in the ax25d.conf man page. A more detailed example is included in the ax25-utils package that might be useful to you too.

12.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

13. Configuring the node software.

The node software was developed by Tomi Manninen <tomi.manninen@hut.fi> and was based on the original PMS program. It provides a fairly complete and flexible node capability that is easily

configured. It allows users once they are connected to make Telnet, NetRom, Rose, and AX.25 connections out and to obtain various sorts of information such as Finger, Nodes and Heard lists etc. You can configure the node to execute any Linux command you wish fairly simply.

The node would normally be invoked from the ax25d program although it is also capable of being invoked from the TCP/IP inetd program to allow users to telnet to your machine and obtain access to it, or by running it from the command line.

13.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports rose netrom

# Node Identification.
# this will appear in the node prompt
NodeId LINUX:VK2KTJ-9

# NetRom port
# This is the name of the netrom port that will be used for
# outgoing NetRom connections from the node.
NrPort netrom

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800
```

```
# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex node commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"

# Externam Command Aliases
# Provide a means of executing external commands under the node.
# extcmd <cmdname> <flag> <userid> <command>
# Flag == 1 is the only implemented function.
# <command> is formatted as per ax25d.conf
extcmd PMS 1 root /usr/sbin/pms pms -u %U -o VK2KTJ

# Logging
# Set logging to the system log. 3 is the noisiest, 0 is disabled.
loglevel 3

# The escape character
# 20 = (Control-T)
EscapeChar 20
```

13.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ampr User is telnet connected from an amprnet address (44.0.0.0)
ax25 User connected by AX.25
host User started node from command line
```

```
inet user is telnet connected from a non-loca, non-ampr address.
local User is telnet connected from a 'local' host
netrom User connected by NetRom
rose User connected by Rose
* User connected by any means.

port
For AX.25 users you can control permissions on a port by port
basis too if you choose. This allows you to determine what AX.25
are allowed to do based on which of your ports they have
connected to. The third field contains the port name if you are
using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users
to enter a password when they connect. This might be useful to
help protect specially configured users who have high authority
levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --------------------------------------------------
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.
128 Rose (C)onnects allowed.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 255

# The following users are banned from connecting
NOCALL * * * 0
```

```
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 159
* netrom * * 159
* local * * 159
* host * * 159
* ampr * * 159
```

13.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do this you need to add appropriate rules to the /etc/ax25/ax25d.conf file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[vk2ktj-1 via radio]
default * * * * * 0 root /usr/sbin/node node
```

This says that the Linux kernel code will answer any connection requests for the callsign `VK2KTJ-1' heard on the AX.25 port named `radio', and will cause the node program to be run.

13.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 3694/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 3694 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;

nected to the node.

14. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It may be invoked from the ax25d program as described above in a manner similar to the node program. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
```

```
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.
```

15. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

15.1. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

15.2. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

15.3. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

15.4. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

```
default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj
```

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

15.5. Test the PMS.

To test the PMS, you can try the following command from the command line:

```
# /usr/sbin/pms -u vk2ktj -o vk2ktj
```

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

16. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
default * * * * * * *
root /usr/sbin/ax25_call ax25_call bpq %u vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu&#65533;
ally be the Linux ax25d daemon and then be automatically switched to
an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. The `netrom_call' and `rose_call' utilities work in similar ways. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

17. Configuring the Rose Uplink and Downlink commands

If you are familiar with the ROM based Rose implementation you will be familiar with the method by which AX.25 users make calls across a Rose network. If a users local Rose node has the callsign VK2KTJ-5 and the AX.25 user wants to connect to VK5XXX at remote Rose node 5050882960 then they would issue the command:

```
c vk5xxx v vk2ktj-5 5050 882960
```

At the remote node, VK5XXX would see an incoming connection with the local AX.25 users callsign and being digipeated via the remote Rose

nodes callsign.

The Linux Rose implementation does not support this capability in the kernel, but there are two application programs called rsuplnk and rsdwnlnk which perform this function.

17.1. Configuring a Rose downlink

To configure your Linux machine to accept a Rose connection and establish an AX.25 connection to any destination callsign that is not being listened for on your machine you need to add an entry to your /etc/ax25/ax25d.conf file. Normally you would configure this entry to be the default behaviour for incoming Rose connections. For example you might have Rose listeners operating for destinations like NODE-0 or HEARD-0 that you wish to handle locally, but for all other destination calls you may want to pass them to the rsdwnlink command and assume they are AX.25 users.

A typical configuration would look like:

```
#
{* via rose}
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsdwnlnk rsdwnlnk 4800 vk2ktj-5
#
```

With this configuration any user who established a Rose connection to your Linux nodes address with a destination call of something that you were not specifically listening for would be converted into an AX.25 connection on the AX.25 port named 4800 with a digipeater path of VK2KTJ-5.

17.2. Configuring a Rose uplink

To configure your Linux machine to accept AX.25 connections in the same way that a ROM Rose node would you must add an entry into your /etc/ax25/ax25d.conf file that looks similar to the following:

```
#
[VK2KTJ-5* via 4800]
NOCALL * * * * * * L
default * * * * * * - root /usr/sbin/rsuplnk rsuplnk rose
#
```

Note the special syntax for the local callsign. The `*' character indicates that the application should be invoked if the callsign is heard in the digipeater path of a connection.

This configuration would allow an AX.25 user to establish Rose calls using the example connect sequence presented in the introduction. Anybody attempting to digipeat via VK2KTJ-5 on the AX.25 port named 4800 would be handled by the rsuplnk command.

18. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

19. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

/proc/net/arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

/proc/net/ax25
contains a list of AX.25 sockets opened. These might be listening for a connection, or active sessions.

/proc/net/ax25_bpqether
contains the AX25 over ethernet BPQ style callsign mappings.

/proc/net/ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

/proc/net/ax25_route
contains AX.25 digipeater path information.

/proc/net/nr
contains a list of NetRom sockets opened. These might be

listening for a connection, or active sessions.

/proc/net/nr_neigh
contains information about the NetRom neighbours known to the
NetRom software.

/proc/net/nr_nodes
contains information about the NetRom nodes known to the NetRom
software.

/proc/net/rose
contains a list of Rose sockets opened. These might be listening
for a connection, or active sessions.

/proc/net/rose_nodes
contains a mapping of Rose destinations to Rose neighbours.

/proc/net/rose_neigh
contains a list of known Rose neighbours.

/proc/net/rose_routes
contains a list of all established Rose connections.

20. AX.25, NetRom, Rose network programming.

Probably the biggest advantage of using the kernel based
implementations of the amateur packet radio protocols is the ease with
which you can develop applications and programs to use them.

While the subject of Unix Network Programming is outside the scope of
this document I will describe the elementary details of how you can
make use of the AX.25, NetRom and Rose protocols within your software.

20.1. The address families.

Network programming for AX.25, NetRom and Rose is quite similar to
programming for TCP/IP under Linux. The major differences being the
address families used, and the address structures that need to be
mangled into place.

The address family names for AX.25, NetRom and Rose are AF_AX25,
AF_NETROM and AF_ROSE respectively.

20.2. The header files.

You must always include the `ax25.h' header file, and also the
`netrom.h' or `rose.h' header files if you are dealing with those
protocols. Simple top level skeletons would look something like the
following:

For AX.25:

```
#include <ax25.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
```

```
sockaddr.fsa_ax25.sax25_family = AF_AX25
```

For NetRom:

```
#include <ax25.h>
#include <netrom.h>
int s, addrlen = sizeof(struct full_sockaddr_ax25);
struct full_sockaddr_ax25 sockaddr;
sockaddr.fsa_ax25.sax25_family = AF_NETROM;
```

For Rose:

```
#include <ax25.h>
#include <rose.h>
int s, addrlen = sizeof(struct sockaddr_rose);
struct sockaddr_rose sockaddr;
sockaddr.srose_family = AF_ROSE;
```

20.3. Callsign mangling and examples.

There are routines within the lib/ax25.a library built in the AX25 utilities package that manage the callsign conversions for you. You can write your own of course if you wish.

The user_call utilities are excellent examples from which to work. The source code for them is included in the AX25 utilities package. If you spend a little time working with those you will soon see that ninety percent of the work is involved in just getting ready to open the socket. Actually making the connection is easy, the preparation takes time.

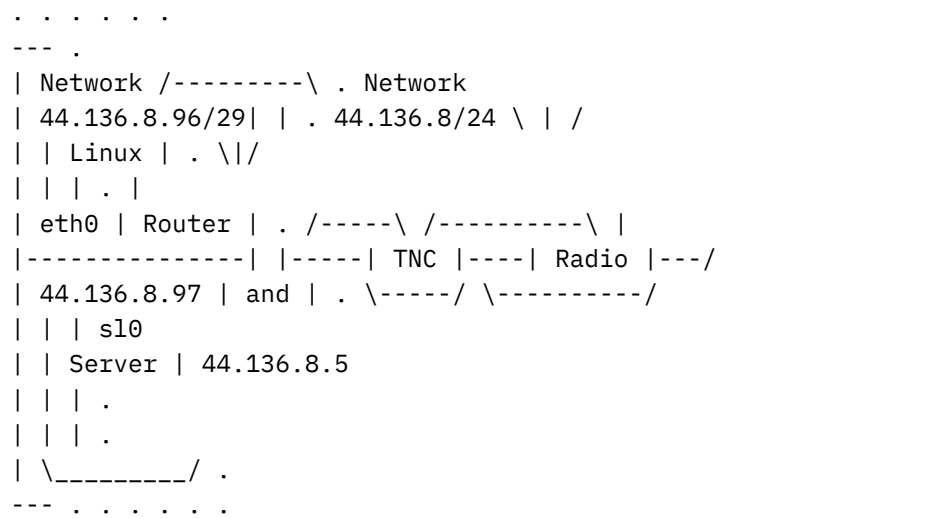
The example are simple enough to not be very confusing. If you have any questions, you should feel to direct them to the linux-hams mailing list and someone there will be sure to help you.

21. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

21.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \

4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0

The use of the mss and window parameters means that I can get optimum
performance from both local Ethernet and radio based connections.
```

• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

```

*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telstra.com.au
v2.3, 1 April 1997

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added entry based last updated field.
bpf - filter calculator
BayBox - Packet BBS
digiinfo - digipeater information database
Contest logging program
Chirp contest logger
bip

pileup
twclock
DX Cluster watcher
F6FBB BBS

Corrections/Updates:
Changed all ftp: url's to point to the directory rather than the file.
CLX, and just about everything else.
Updated location of John Gotts mirror.

ToDo:
find a way of automating this, or find an alternate means of
presenting this information.

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document
appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-
HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the
following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com
<http://www.hboc.com/linux/index.html> and www.lan.com
<http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www-
personal.engin.umich.edu <http://www-
personal.engin.umich.edu/~jgotts/linux/HOWTO/HAM/HAM-HOWTO.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the
following two locations: wheel.dcn.davis.ca
<http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and
fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in
Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at:
DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too.
I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite
communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor
G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.91 released.

Updated
01 Apr 97

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer
directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.cs.nott.ac.uk <ftp://ftp.cs.nott.ac.uk/jsn/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/> or ftp.funet.fi

<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/>. The version current at the time of writing was microsat-0.91.tar.gz. Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 4.0 is a fully commercial release. Version 3.1.5 is the last freely available release.

Updated
01 Apr 97

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the

Moon are also provided. Future releases will provide more options. SatTrack requires about 5MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

Where and How to obtain it.
The commerical version of SatTrack can be found at: SatTrack WWW Home Page <http://www.primenet.com/~bester/sattrack.html>.

The free version of SatTrack may be found at: ftp.jvnc.net <ftp://ftp.jvnc.net/priv/kupiec/sattrack/> or ftp.amsat.org <ftp://ftp.amsat.org/amsat/software/Linux/>.

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required. Version 4.0 is a fully commercially supported release.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

Updated
01 Apr 97

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the

system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict.tgz from: amsat.org <ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

Updated
01 Apr 97

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

```
# cd /
# tar xvfz dove.tgz
```

Where and How to obtain it.
You can obtain dove.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

Updated
01 Apr 97

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen.tgz from: amsat.org
<ftp://amsat.org/amsat/software/Linux/>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its CAT port from linux.

Status
Working

Updated
01 Apr 97

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. F6FBB Packet BBS

Author
Jean-Paul Roubelat, F6FBB, jpr@f6fbb.org

Description
Fully Features Packet Radio BBS system with X11 Windows interface

Status
Version 7.00b45 is Beta.

Updated
01 Apr 97

System Requirements
Kernel based AX.25/NetRom/Rose network configuration. X11 windowing system for the X11 version.

Detail
This is a port of the well known F6FBB Packet Bulletin Board system to Linux. The BBS supports connections from AX.25, NetRom, Rose and TCP/IP and offers all of the features you'd expect from the product. The optional X11 interface provides a nicely presented sysop interface.

A mailing list for F6FBB is available. To subscribe send a mail message to: majordomo@f6fbb.org with the line `subscribe xfbb' in the body of the message. The mailing list is archived at zone.pspt.fi <http://zone.pspt.fi/archive/fbb/>.

Where and how to obtain it
You can obtain the F6FBB package from its home site at: F6FBB Home Page <http://www.f6fbb.org/>.

Licensing/Copyright etc.
The F6FBB software is frelly available for non-commercial use.

5.2. DX Cluster Watcher

Author
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

Description
Displays DX information passively received from a DX Cluster Node.

Status
Version 4, stable.

Updated
01 Apr 97

System Requirements
Requires Kernel based AX.25 configuration.

Detail
The DX Cluster watchers listens to the DX Cluster traffic on your frequency, captures it and displays it in a coloured text window. It conserves traffic on the frequency by not requiring you to actually connect to the cluster node.

Where and how to obtain it
You can obtain the DX Cluster Watcher from the: DX Cluster Watcher Home Page <http://ing49.unife.it/~iz4ako/project_inglese.html>.

Licensing/Copyright etc.
GNU GPL

Contributed by
Pierluigi Guerzoni, IZ4AKO, iz4ako@ing49.unife.it

5.3. Digiinfo

Author
Ported by Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

Description
A database of packet radio network information.

Status
Version 2.5.1 is stable.
Updated
01 Apr 97

System Requirements
No special requirements.

Detail
digiinfo was a program initially written for the Atari by
Karsten DC7OS. Digiinfo is a database program for displaying
information about the packet radio networks.

Where and how to obtain it
You can obtain the digiinfo package and database from its home
site at: www.vdazone.org
<http://www.vdazone.org/~dl5mlo/digiinfo/>.

Licensing/Copyright etc.
ALAS, Amateur only license

Contributed by
Mario Lorenz, DL5MLO, dl5mlo@vdazone.org

5.4. BayBox BBS

Author
Flori Radlherr, DL8MBT, flori@t-online.de

Description
A Packet Bulleting Board System for Linux.

Status
Version 1.38, stable.

Updated
01 Apr 97

System Requirements
Recommended hardware is 80486/33Mhz with 8MB RAM

Detail
Unfortunately the documentation is in German and I'm unable to
understand most of it. I get the impression though that this is
a BBS that supports all of the usual features on a packet radio

bbs, forwarding etc, but the documentation seems to suggest that the Linux version supports telnet access only. This isn't really a big constraint, as you can easily configure a session under the Linux ax25d program to accept AX.25/NetRom/Rose connections and connect the BBS via telnet.

If you're able to help by giving a better description, I'd appreciate it.

Where and how to obtain it
You can obtain the BayBOX from its home sites at:
members.aol.com <http://members.aol.com/baybox/>

Licensing/Copyright etc.
The BayCom-Mailbox software is intended for usage in amateur radio context only. Any usage outside of the amateur radio AX.25 network, especially commercial usage or distribution is prohibited. Within the scope of this limitation, usage and copying of the BayCom-Mailbox without fee is hereby granted. In any case of usage, the software is provided "as is" and comes with absolutely no warranty, neither implied nor expressed.
Contributed by
Iztok Saje, S52D, s52d@s55tcp.ampr.org

5.5. JNET

Author
Takeshi Shoji, JF2CEX, taka@myk.ilc.or.jp

Description
An enhanced version of KA9Q NOS for Linux and other platforms.

Status
Version 961210, Stable, released.

Updated
01 Apr 97

System Requirements
No special system requirements, requires KISS TNC.

Detail
This another actively maintained derivative of the KA9Q NOS package. This version has been ported to a wide range of alternative platforms and offers some enhancements not available in other NOS derivatives. A small catch is that most of the documentation is in Japanese.

Where and how to obtain it
You can obtain the latest version of JNET from its home site at:
www.myk.ilc.or.jp
<http://www.myk.ilc.or.jp/~taka/software.html#jnetcex>.

Licensing/Copyright etc.
I'm actually not sure. I suspect though that as a NOS derivative
it is freely usable by amateur radio operators.

Contributed by
Isao SEKI, http://www.prug.or.jp/people/jm1wbb

5.6. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

Updated
01 Apr 97

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan
manager could use to analyze and manage traffic. The tools
present a graphical view of all of the traffic received at the
monitoring node allowing the observer to easily see where the
traffic flows normally and other information such as:
- Packet counts
- Node statistics
- Network Utilisation figures

The network is displayed with icons representing hosts and lines
between them representing the traffic flow. The graphical
display provides an instantly absorbable view of the traffic on
the network being monitored. Richard has more information and
sample displays at: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com
<http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.7. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.11, Stable

Updated
01 Apr 97

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.8. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

Updated
01 Apr 97

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you
use the splitscreen program to access services like convers.

Where and how to obtain it
The `splitscreen' package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright etc.
Public Domain

5.9. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
Version 960426, working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be retained.

5.10. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The `7pl217sr' encoder package is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.11. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features many enhancements not found in other NOS versions.

Status
Version 2.21. Stable.

Updated
01 Apr 97

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/unix/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.12. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.
Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

Updated
01 Apr 97

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a
compatible set of commands with the RLI bbs so users will be
familiar with it immediately. It then extends the command set
to be a very nice natural language style interface (e.g "list at
allus about KPC-3"). Many csh style bang commands are supported.
Also included is a mail interface to provide a packet to
internet gateway.

Currently you need to customize the source code for your
installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to
rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com.
This code is not packaged for distribution yet since it is not
past the alpha stage of development.

A version of the software is available from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/n0ary/>

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.13. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25
kernel code or with the Wampes package.

Status
In development, working.

Updated
01 Apr 97

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could
build a Packet BBS to smtp gateway for Linux. I'm not sure what
the current status is as the last version I could find was dated

30 Jun 1995. The latest binary version supports:
• MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain the `LBBS' package from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.14. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

Updated
01 Apr 97

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.15. CLX Packet DX Cluster Program

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Current version 2.07

Updated
01 Apr 97

System Requirements
Linux Kernel version 2.0 or greater, TCP/IP networking, SysV IPC. Also requires Perl and optionally Expect.

Detail
PacketCluster nodes have been available for about seven years. The original software was written by Dick Newell, AK1A, and is running under DOS. CLX is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical. Remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and CLX. So it fits well into an established network of PacketCluster nodes.

CLX is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from a users point of view. It allows multitasking and different priorities.

• The software detects looping DX spots without generating endless messages. CLX filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". CLX knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by CLX users.
• An interface for extending CLX with your own programs and applications.

• Extended connectivity through the use of connect scripts. CLX now can build up and maintain virtually any connection using TCP/IP, UUCP or any other communication programs.

• CLX uses modern programming concepts like shared memory for common data, lex and yacc to implement command language, shared libraries to keep binaries small, remote procedure calls for interprocess communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises of several modules running as separate processes.

Where and How to obtain it
You can obtain the software from ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

00Index
clx_206.tgz
clx.txt
README

Licensing/Copyright
CLX (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to clx_us@dl6rai.muc.de to organise this.

Contributed by
Bernhard ("Ben") Buettner, DL6RAI

5.16. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU,

wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS,
DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

Updated
01 Apr 97

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than
the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text
to files. You can log transmit, receive or both to a log
file. You can overwrite or append received data to existing
files. You can use the `autobin' protocol to transmit or
receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can
access other programs on your computer. You can also run a
program and direct its input/output to a channel so that
users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a
device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do

so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

New versions will support the Linux kernel AX.25 code.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
The `dptnt' package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.17. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an

IPIP encapsulating gateway. Note, this probably isn't necessary any more in most installations because recent kernel support a kernel device to perform encapsulation.

Status
Ron is running this code himself, and the other version have been run quite successfully.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.18. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsulating gateway.

Status
Not properly tested, but assumed to work ok.

Updated
01 Apr 97

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>. An enhanced version of this software is included in recent versions of the Linux AX.25 utilities. Refer to the AX25-HOWTO <http://sunsite.unc.edu/LDP/HOWTO/AX25-HOWTO.html> for more information.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.19. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de, and Brian Lantz brian@lantz.com.

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics. Brian Lantz has further enhanced the software with additional features.

Status
In use of a number of popular convers servers, appears very stable.

Updated
01 Apr 97

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.

5.20. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.08

Updated
01 Apr 97

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.21. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

Updated
01 Apr 97

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.22. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and convert it into a talk request for a user on the host machine. This may also be configured for use with the ax25d program so that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

Updated
01 Apr 97

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't actually defined anywhere (except the source), the ttylink protocol from NOS has become the defacto standard, at least for amateurs, to provide keyboard to keyboard communication over tcp/ip. This daemon fills the need for something to answer ttylink requests to linux machines.

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

An slightly enhanced version of this software is now included in the Linux AX25 utilities package.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. Pileup

Author
Richard Everitt G4ZFE richard@babbage.demon.co.uk. Based on sccw by Steve Merrifield.

Description
CW pileup training program

Status
v1.0. Stable but extra development planned.

Updated
01 Apr 97

System requirements
Linux supported sound card

Detail
CW pileup trainer (similar to PED) based on sccw. Up to 9
stations calling at once with variable CW speed and tone/volume
to simulate a pileup. Callsigns are taken from the 1996 CQ WW
CW contest entry of M6A to add some realism.

I fed /usr/dict/words to the program and it was quite a chuckle.
So even if you aren't into Morse it is worth trying out just for
the giggle.

Where and How to obtain it.
You can obtain the pileup package from its home site at: Pileup
Home Page <http://www.babbage.demon.co.uk/pileup.html> or
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

Contributed by
Richard Everitt G4ZFE richard@babbage.demon.co.uk.

6.2. bip

Author
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr. 24 rue de
l'Oasis, 92800 Puteaux, France

Description
A program to learn Morse code (for various Unix-like platforms)

- --- END Linux HAM HOWTO part 1/2 ---

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Status
Production release

Updated
01 Apr 97

System requirements
Works on many Unix-like systems, including Linux. On linux it
works with or without X11 or a Soundcard.

Detail
bip offers a very wide range of options that make it very
suitable as a code practice program. It can send text from text
file or random character groups but it has a range of other
features. Some of these are
```

- Morse compliant with ARRL specification
- adjustable volume and tone
- adjustable speed, including Farenheit method
- Jitter feature to simulate hand sent morse

```
Where and How to obtain it.
Not available online, but anyone can write to
Marcin.Skubiszewski@inria.fr for a copy of the source code.

Licensing/Copyright
Shareware $10.

Contributed by
Marcin Skubiszewski, Marcin.Skubiszewski@inria.fr.

6.3. cw2hex
```

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.
Status
version 1.1 is tested and ready to go.

Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.4. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

Updated
01 Apr 97

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.5. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

Updated
01 Apr 97

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or
the program is capable of generating random character groups. As
it stands you must invoke the program from a Linux Virtual
Console, as it relies on certain kernel calls to produce the
sound, and these don't work as easily from an XTerm. As it
sounds each character it lists the character in verbal form (Di,
Dit, Dah etc.) to the screen. Alan is hoping that someone will
take the code and enhance it with the features he has listed in
the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.z>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.6. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.
Status
Quite stable

Updated
01 Apr 97

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse.tar.gz can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.
Updated
01 Apr 97

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either www.bobsplace.com <http://www.bobsplace.com/~twitham/> or sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

Updated
01 Apr 97

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope in the scope package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.3. Printed Circuit Board design tool.

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

Updated
01 Apr 97

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current> or from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>

Licensing/Copyright

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation tool suite.

Status
vers 5.10, stable.

Updated
01 Apr 97

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet. It is a suite of tools for circuit design and simulation.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

Updated
01 Apr 97

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain the irsim package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

Updated
01 Apr 97

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of the spice package from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely
redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

Updated
01 Apr 97

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the svgafft package at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

Updated
01 Apr 97

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio, performs a fast fourier transform on the data and displays the output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/> or by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development and implementation of Digital Signal Processing. It allows you to design your DSP network, runs simulations with oscilloscope style plots and listings at any point in the network.

Status
Alpha version 0.2.

Updated
01 Apr 97

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of total memory (real+swap) recommended, 6Mb of disk space for minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is a binary only package for Linux which I recommend you start with. There is comprehensive documentation included from which you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi <ftp://ftp.funet.fi/pub/Linux/util/electronics/opd>. There are a number of files that comprise the package, some of the quite large so be prepared.

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

11.10. bpf - bandpass filter calculator

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
bpf assists in the design of two pole bandpass filters.

Status
Stable.
Updated
01 Apr 97

System requirements
standalone textual program, requires gcc to compile

Detail
bpf is a simple text interface program that offers you a menu of

options of different ways of inputting design data. After you've entered the data it presents a text based circuit diagram and a list of the appropriate component values. It sounds simple, and it is, but it's also quite cute, and bound to be useful.

Where and How to obtain it.
You can obtain bpf.tar.Z from www.atd.ucar.edu <http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse Code tutorials, technical examination database, Computer Based Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. twclock - World Time Clock for Hams

Author
Ted Williams, ted@bluestone.com

Description
A world clock designed for ham radio operators

Status
Version 1.0, stable.

Updated
01 Apr 97

System requirements
Motif libraries if you want to recompile it. Just X11 if you want to run the precompiled binaries.

Detail
Anyone who needs the time of day someplace else in the world, or anyone tired of the same old look of their clock will find this software of interest. It is implemented with Motif widgets, and will displays the current time in major cities around the world.

Where and How to obtain it.
You can obtain the twclock package from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>.

Licensing/Copyright
GNU GPL

13.2. Chirp - Contest Logger

Author
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

Description
Contest logging program

Status
Active development

Updated
01 Apr 97

System requirements
Requires ncurses library and header files to compile.

Detail
A linux based contest logging program. Kenneth is writing it so
he can use it on his laptop while working VHF contests. He is
also writing it as an excuse to learn ncurses programming. His
goal is a general purpose contest logger that a user can specify
new contests in as they come about. It supports all bands and
modes.

Where and How to obtain it.
When version 1.0 is available, you should be able to find it
from the Chirp Home Page
<http://www.cs.utexas.edu/users/kharker/chirp/>

Licensing/Copyright
Probably GNU GPL.

Contributed by
Kenneth E. Harker, N1PVB, kharker@cs.utexas.edu

13.3. Contest - Contest Logging Program

Author
Carsten Wilderotter, carsten.wilderotter@student.uni-ulm.de

Description
A logfile program for Contest operation

Status
Version 0.0.1, Alpha

Updated
01 Apr 97

System requirements
No special requirements.

Detail
Linux contest logging program.

Where and How to obtain it.
You can obtain the contest package from: sunsite.unc.edu

<ftp://sunsite.unc.edu/pub/Linux/apps/ham/>

Licensing/Copyright
GNU GPL

13.4. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for Amateur Radio operators.

Status
Not yet available.

Updated
01 Apr 97

System requirements.
Linux compatible hardware, some software will obviously require specialised hardware to operate. No additional software should be required.

Detail
A complete Linux distribution specifically catering for Amateur Radio operators. It will include a fully featured Linux installationplus a range of amateur radio specific software such as those listed in this document. Bruce has detail and updated status report available at the LinuxForHams WWW page <http://www.rahul.net/perens/LinuxForHams>. Bruce has been extremely busy with the Debian project and this has reduced his available time to just about zero. He does still intend to pursue this. Why don't you help out by maintaining one of the software packages as Debian packages ? More information from the Debian Web Site <http://www.debian.org/>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.5. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are

exposed by sunlight and what parts aren't.

Status
Released.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.6. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

Updated
01 Apr 97

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture

of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like mercator projection. You have a number of options in determining the behaviour of the view. The details are available from the xearth Home Page
<ttp://www.cs.colorado.edu/~tuna/xearth/index.html> and in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu <ftp://cag.lcs.mit.edu/pub/tuna> or just about any X11/contrib directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is

what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would
be great. If it is commercial software then the name of the
company distributing the software, and an address or telephone
number. If it is available only by some other means, say mail
order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain?
Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what
you do know and I'll list what I can. I'd rather have an incomplete
listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telstra.com.au

I'd list a packet radio address too but I'm still not properly
operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and
Linux take place. They take place in the comp.os.linux.* newsgroups,
they also take place on the linux-hams list on vger.rutgers.edu.
Other places where they are held include the tcp-group mailing list at
ucsd.edu (the home of amateur radio tcp/ip discussions).
To join the Linux linux-hams mail list, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

704. Radios For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-07 00:00:00 UTC
From: michael.downing@lvvwd.com
Message-ID: <884151792.865271816@dejanews.com>
Source record: 182245
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Radio Shack pro-2006 Scanner 25-1300 Mhz with cell mod, antenna adapter, instructions and box. $295

Radio Shack DX-392 portable short wave receiver with programmable cassette, (same as Sangean 818cs), power supply, instructions, and box $169.

Uniden President 10M transceiver. SSB and AM xmit not working. FM and receiver fully functional. With microphone, brackets, and box. $50.00.

GE G-97 1939 console radio in blonde cabinet. Recapped and aligned working excellent. Cabinet is so-so. $295.

McIntosh MR-65B all tube FM tuner. Mint condition. Beautiful chrome. No cabinet. This is a bargain price for a McIntosh but I need money now! $325.

1940(?) Zenith console complete except for steering wheel. 8S something Not gone through or turned-on in 3 years. Cabinet needs refinish but no extensive damage. $125.

All Plus shipping cost from Las Vegas.

Thier is a micro-slide switch behind the front pannel. Partialy lift the cover (be carefull of connecting wires going to th amplifier section). The swicth is on the right hand side, behind mode selector push butttons, on a vertical PC board, attached to the front pannel. Slide it over with a small screwdriver. 1.8 to 30 Mhz transmit.
Steve.

Would you mind telling me what non-type acceptance means since there is no type acceptance for amateur radio equipment? Hmmmm? I don't want to alarm you but your ignorance is showing.--

Have your 4 year old move the period one character over so it's
http://surf.to/ham.radio
and watch it connect. I think the ".to" is the country of Tonga that is
making a few bucks
by selling addresses.

Basically it's a re-direct service to
http://www.qni.com/~kg0zz/amateur_radio/clipart.htm

On my ts820 the display was operating intermittently. From a source
(I forget where) I learned that sometimes the soldering of the DIP ICs
inside the DG1 is lacking. I examined all the solder joints and touched up
any that looked suspicious. Worked fine after that. Good luck.

By the time he has finished sending Shakespeare on packet, you could probably WALK to Boston, buy the book, walk home and be half finished reading it. And you would have a complete copy, we don't know of any way to be sure what he'd have without trying it.

That's largely the problem with the complex digital systems, they work fine in theory, and sometimes even in real life, but they often become musclebound by their own overhead and the very involved complexity of their overall systems, forcing serious delays or even non-communication. One-on-one, station to station, he could probably do it without problem if everthing was "optimal". If there was a digipeter network involved with all the usual forewarding, BBS etc garbage, not a chance. Maybe on PACTOR or CLOVER. Maybe.

If the real life implementations of the advanced Amateur digital modes worked as well as the theory says they should, we would *really* be impressed. The Maritime GMDSS system is supposed to be perfect, too, but you know that story already.

Surely you know that, in the U.S., TRANSMITTING on a radio that is not approved by the FCC for that specific radio service is illegal. Just because a radio is approved for ham use does NOT automatically make it legal for any other radio service, including FRS. You may verify this with Yeasu.

Just a hint that you may want to be more careful about including your name, etc. when you may be violating a law.

The originating newpaper article is wrong on this point. The officical use
of Morse code was foramlly scrapped in the UK at that time, the world wide
demise of CW isn't until 01 Feb 99.

>
> But why didn't they use the more whiz-bang modes to communicate?

Probably because the equipment was not installed on the vessel. Finn seems
to be ignorant of the fact that existing vessels with Morse code capabilities
are allowed to do so until 31 Mar 99.

> Clover
> should have worked (provided someone else who also had Clover
> capabilities had made an appointment for the emergency qso). RTTY should
> have worked. Or packet. Heck, the message would have made it that

> station.

A ship equipped for GMDSS operation would not use any of those modes of
communication because those modes are not used within GMDSS. Therefore, the
rhetorical question is moot.

> Or satellite or voice or something...why did they have to use
> CW to get saved???

Probably because the ship owner is waiting to the very last moment before
equipping the vessel with a modern communications, jeopardizing the lives
of the crews due to the lack of coasts stations with CW capabilities.

>that.

If that was what they did, then it would be hard. There would be no way
to distinguish between a dot and an intracharacter space. They'd be
equally spaced clicks. Fortunately, that isn't how wireline telegraphy
worked. The sounder makes distinctly different sounds for key down
and key up, so both the location and direction of the timing edges can
be easily recovered. Any interval that begins with a key down click must
be a voiced symbol, and any interval that begins with a key up clack must
be an unvoiced symbol. Thus all 5 symbols used by Morse can be properly
decoded via sounder.

Right you are, microwave oven magnetrons aren't operated in pulsed mode.
They are operated in CW mode (magnetrons *can* be operated in pulse mode,
but those in microwave ovens aren't). When reduced output is required, they
are cycled on and off, but this isn't what would normally be considered pulse
modulation since the cycle times are measured in seconds.

One can modulate a microwave oven magnetron, however. It is possible
to injection lock the magnetron to an external reference. If you FM modulate
that reference, the maggie will follow it. So you can get several hundred
watts of FM modulated RF from the maggie that way.

> Then how can you stand usenet, or the internet for that matter?

Easy..... the internet is a store and forward device for the exchange of
letters. I can talk chat with you sometimes maybe, but almost all of the
internet is based on information store and forward, not real time talking
or creative exchange of ideas, etc. As a letter typer and mailer, it
is great. It lacks any personality, though, and restricts one to what
one can inflect via writing only. Direct ``fisting'' on the ham radio
can inflect all sorts of nuances, just like in normal speech, if you care
to listen. Entirely different, conceptually.

> : If I want computers, I can use the internet.

Computers do wonderful things for society, and are great working tools.
Computers get monotonous. I can say that from building and using them
since the punch card era (almost 30 years now). Try as we may, with
all the intelligence we can cram into them, they don't hold a candle
to a real body with a real brain exhanging ideas. But, they make great
calculators, writing machines, game toys, pipes to here and there,
storage devices, fancy printers, etc., as dumb tools for daily use.
To that extent, I have half a dozen unix boxes in the office and lab,
and an equivalent number at home.... so what. As machines to send CW,
they are great at that, with good programming, but still can't even begin
to handle the simple nuance of a laugh at QRQ, a CFO cluck, the tension
```

of an operator about to lose his life at sea, etc. I know by the sound of particular sending devices WHO is aboard for the watch, and computer keyboards just can't do that. That nuance alone tells me much information about who is around, and who might be interesting to talk to, tonite, an immediate insight into his age, and experience, and even what kind of equipment or station he has. I don't even have to know the callsign to read that from how the code is sent by him. Computers can't do that.

That is why computer CW is nice, but second class, at best, to the real thing --- a good hand morse operator.

Andy writes:

I am under the impression that the maggies in a microwave oven
are driven by half-wave rectified 60 hz, transformed up to a
multi-KV value. That would make them "sort of " pulse
modulated, turning them on and off with a half sine wave
--- on for 8 ms and off for 8ms. Also the half sine B+
would creat amplitude and freq/phase modulation as well,
all at the same time.

Which doesn't affect the intended purpose -- cooking.

I've never seen a regulated HV power supply in a microwave
oven, just a step up transformer and a half wave rectifier.

Actually, Ten-Tec has made VHF stuff in the past, and sells a line
of kit FM and allmode transverter kits for 2m and 6m.

They also make HF and other radios for the military. Most of
the people who work for TT are hams.

Motorola Portable Radios For Sale

Package includes
2 - Motorola HT50 portable radios
1 - Desktop Rapid Charger

These walkie-talkies are typical HEAVY DUTY Motorola quality.

FEATURES:
- Both have new antennas and batteries.
- Frequency: 457.5625Mhz
- Low/High power switch
- Connector for optional accessories (lapel mic, earphone, etc.)
- Heavy duty construction

Great for hunting and other outdoor (or indoor) activities.

Sale Price - $250 obo

If interested please contact Gregg Owens at;
(W)703-689-5013
(H)703-450-3809

Let's see how well you do on your own in outer Rangoon, KemoSabe .... ;0)

>Masa would still be the town clown if he could copy Morse code at 50 wpm.

Are you kidding? He'd be embraced by the pro-code zealots as a god!

>He enjoys playing the fool ...

How do you know? Have you asked him lately?

> ... - the difference between you and Masa is he
>realizes he's a fool. ...

You claim Mr. Masa is a fool, and you claim Mr. Masa knows this:
1.) You seem to make the claim simply on the basis of Mr. Masa's
(in your view) clumsiness with language, and apparently for no other
reason.
2.) Again, has Mr. Masa communicated to you this supposed "realization"?
3.) IMO, the one who appears to be the "fool," the "jerk," and the "town
clown" is the brash, snootishly arrogant one who makes those claims
for others not like, or perhaps "as good" as himself. ;0)

> ... You could turn a church sermon into a no code debate,
>Squiggy.

If the sermon were on equality, fairness, and level playing fields, I'd say
Carl would be close in using this debate as an analogy. Of course, let's not
forget the main reason for the "church sermon," assuming the "church" you refer
to is non-Morseodist.
Now if the "church" is Morseodist, I'd say Carl would definitely turn the
sermon into a debate ... and probably get bodily thrown out the front door as
well! ;0)

>
>You aren't interested in ham radio - you are only interested in making noise.

IMO, there are many aspects to ham radio, even yours -- Belittling the
efforts of those who attempt to make Amateur Radio better, even if only in a
small way.

>
>You are bitter because you haven't gotten anything out of ham radio because
>you haven't put anything in to it. You are very confused.

It seems apparent that you don't read much, or at a minimum, do not
comprehend at all well what you read : Carl has many times referred to and
narrated his experiences in Amateur Radio, which, as I (and most people)
intrepret them, have brought and continue to bring much satisfaction his way.
IMO, it is someone else who is confused -- not to mention brash, arrogant,
holier/better-than-thou, and (not in the least) more perfect.

Well, ya gotta admit, flushing the mandatory Morse code test down the toilet
ain't such a bad idea -- at least not in my book! =0)

> ... You always wanted to be a HERO instead of a
>ZERO, so here you are typing, in hopes of confusing the sheep.

Excuse me? Who's confusing? It seems to me one of the master obfuscators is
at work here -- and I don't mean Carl or myself. ;0)

>
>You have ZERO excuse for being a tech, Squiggy. ...

Slamming the techs again: Tsk, tsk. I'm a Tech+ and I feel fine .... =0)
What is so satisfactory, important or meaningful about being able to beep
fast -- simply from the regulatory point of view? Beeping fast, IMNSHO, falls
into the same category as contesting, DXing, ATVing, QRPing, DIGITALing, et al,
i.e. from the regulatory standpoint, there is NO justification for testing --
other than for knowledge of technical aspects, what other mode/coding/decoding
scheme is tested for? From the personal and operational standpoint, there is
EVERY justification for usage, development and implementation.
And, where in Part 97 is it written that one must upgrade? I believe that
requirement was dropped some time ago -- though IMO there are still those who
think that's the way things STILL work (or at least wish they did) -- they
cannot -- nay, WILL NOT -- get out of the stagnating swamp of status quo!

> ... You have expounded many times

>
> Well, CW is usable in any spectrum, last time I checked.

Ah, but its not being used, which was my point (and the point that I suspect that most of the Kenicoyasawhooie executives would make).

Most of the other radio services (military, government, business, commercial, etc) have given up on CW as a primary means of communications.

The Amateur radio service is that only radio service which still heavily uses CW as a means of communications. And, even in the Amateur bands, fewer operators today are using CW as a primary means of communications than in days gone by.

Considering how small the CW market is, you simply cannot expect the Kenicoyasawhooie executives to put much emphasis on CW when designing a radio, especially when many of the radios the Kenicoyasawhooie companies are designing are being built to operate in multiple radio services.

A Kenicoyasawhooie radio you buy for Amateur HF is also likely being sold to other services to use in those bands. Since CW is almost nonexistent in those bands, and only a portion of the Amateur operators use it, other issues become more important when designing a radio (and CW gets pushed into the background).

I'm not making excuses for the Kenicoyasawhooie executives, only pointing out reality. Of course, none of this helps the CW enthusiast. As you so wisely pointed out, it is a darn good thing that there are other companies out there filling in the gaps.

It has nothing to do with dead OR sleeping dogs. CW is allowed on ALL the amateur bands from 160 Meters through and including 23 Centimeters. It is the ONLY mode that is allowed on ALL frequencies. Ever wonder why?

You're not very politically astute, I see. The government responds to
dollars and votes. The boys with the dollars are slowly chipping away
at the ham bands, and the ARRL is powerless to stop them. Even the
once-mighty NRA is but a shadow of its former image, and has some of
the same problems among the rank and file as the ARRL has with the ham
community.

Don't expect the ARRL to save your hobby. It ain't gonna happen
without a major change in direction.

>P.S. In my original post I made an error: In 1914 the League

More than just a radio is needed for GSM. GSM is a digital technology
(a form of TDMA). Some sofisticated hardware is needed to decode the
bitstream into audio. In the US AMPS and NMT in northern europe are
easily intercepted. (just FM analog).

>Am I the only one
>that gets irate on this subject?...John

No, you're not alone. If this "Galaxy" is already a ham rig, then it is to be assumed that KC7VHO wants to convert it to an illegal CB set, to impress his not-yet no-code buddies down on 11m. And it annoys me every time I see a request for illegal "mods." In my opinion, the FCC is pulling a Pontius Pilot. Also in my conspiracy theory paranoia, I believe that the no-code tech was accepted by the FCC as the best way to move the worst of the "freebander" outlaws: give 'em a license, make 'em respectable, and move 'em up to 10m. Sure worked around here.

Yet you can operate CW all you want above 50MHz and never
have passed a CW test. The mode or allowed use of same is
not sufficient reason to mandate testing.

I need some info on how to best protect my gear from EMP (electro magnetic pulse ... created by an atomic bomb exploding in the atmosphere). Ham radio will be the main mode of communications after either a man-made (WWIII) or natural disaster (asteroid/earthquake/volcano/shifting polar poles/etc) and I want my gear to be able to work.

If my radio shack is in an earth sheltered house (under ground) ... it would be protected?

If it was in a concrete shell (with no windows) above ground, would it be protected? Would the room need to be lined with copper?

Richard Carroll wrote:
> Why do you think that I support the retention of CW as a serious-use
> backup mode?

Because you're on a power trip? :-) Hams and/or ham frequencies didn't appear to be involved at all in the ship's CW distress situation. Seems they took advantage of a professional system, manned by professional operators, that performed up to professional standards, just as it was expected to do. That's what professionals do and get paid for.

I am alive today because I was NOT wearing a seat belt in a 1961 wreck. Is that a good reason not to wear seat belts? If not, why is an isolated commercial incident, in which amateurs were not involved at all, reason to force hundreds of thousands of amateurs to learn Morse code? Where is the Return On Investment, Dick? (Your warm, fuzzy feeling is not a good enough return.)

"Head Copy"? Boy, the droids here are going to jump on that one here!

Seriously, I found listening to code tapes in the car dangerous...it
forced me to concentrate on one thing, rather than the mindless fog of
comuting. I used to listen during lunch breaks at work...pretty soon I
could copy any dot-matrix printer.

I also found those disco-code tapes at Dayton to help...they were so
irritating each year that I finally bought one; used it to piss folks off
at work. They sounded so darn stupid, but it would keep your attention.

But Jeff is right, there is so much wasted time during the day that could
be used for study. 73 de KA9YZB.

I have a mint Yaesu FL-2100b Linear Amplifier designed to match the
Yaesu Ft-101 series transceivers. Plate input: 1200 Watts PEP, 1000
Watts CW, and 600 Watts AM, Grounded Grid Class B.
Requires 110 or 220 AC currently wired for 110AC, Forced air cooling,
wt. 41 Lbs.
Has orginal protective plastic covering the face! Tubes are 2 X 572b
triodes and are solid.
This amp is top of the line in every respect, Price is only $450.00, but
might consider a trade. I have just to much equipment and need to down
size, I have 3 amps and I can't use all of them.
Price includes orginal manual, but not shipping! Shipping is Extra!
73 & best wishes
Al

This isn't a plan.

What *positively* do you recommend. I can do all kinds of things to be
involved, but they may be futile rather than effective.

What specifically is your plan?

>
>
> Just don't come whining to me when it's gone, or has been turned into

I don't even know who you are. Therefore, I have no intention of whining to
you. Before you accuse someone of whining and inferring that they do useless
things,STATE YOUR SPECIFIC PLAN TO COUNTER WHAT THE LEAGUE, IN YOUR OPINION,
IS DOING WRONG.

So far, I find nothing of value in your communications on this subject.
Suprise me with something worth reading.

TinyTalk has been available for some time as shareware. It converts text
to speech and uses the SoundBlaster and a variety of other sound devices.
Most of the computer-using blind folks that I know use DECTalk which is a
software/hardware combo designed specifically for text-to-speech.

I would like to see the Board organized by license class, one director
for each class. Members who are Techs would be the only members voting
to elect the TECH Director to the Board. Novices would do the same as
would the Extras and so forth.

This would drastically change the ARRL. Because then ALL member hams
would be heard. I bet if you were to look into the director's
background most of them are probably EXTRA Class now.

To all persons interested in the SONY ICF-6800W.

I have been receiving offers from people and thanks to delays in e-mailings some people have expressed interest and have been unable to contact me, so I have decided to auction the radio on Ebay.com. The auction is for three days only. There is no charge to buyers to use this service and the transaction is still handled directly by me. Go to this link...

http://komodo.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=4018365

Good luck, Les Hall.

780. Multiple audio transmission help

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-08 00:00:00 UTC
From: Joe Burkley <info1@dadaware.com>
Message-ID: <34B5527E.EE0D9F28@dadaware.com>
Source record: 182158

My company is in need of transmitting audio to individuals who will be constantly moving around the building (everything takes place inside the same building). It is one-way transmission and because of mobility, the transmission must be wireless. Each individual

will receive their own information flow, so multiple transmissions will be occurring simultaneously. The transmission will take place almost continuously and using cell phones would be prohibitively expensive.

I am trying to evaluate options including building a custom setup. We are looking at several hundred installations, so we can afford to do things to our specs. A worst case scenario for a given installation would be 200 unique transmission occurring simultaneously. Some installations will be with us as tenants, sharing the building with others. Because of this, we have to be concerned about transmission quality and potentially FCC issues.

Any help in what mechanisms could be used for delivering the transmissions?
Where can I find what frequencies are available for limited range broadcasting
and what restrictions are on their use?
What sort of data bandwidth can a given frequency utilize? Any idea if any products already exist along these lines?

I know this is kindof open ended, but I am at the preliminary stages for the
project. This group seems oriented towards HAM radio,
but your topics of discussion made me hopeful you can at least point me somewhere. Thanks.

-Joe Burkley

For those of you whom are interested, we are offering free classified ads for a limited time on our server. www.tropicom.net

Our classifed ad section will have a special area for Ham Radio Related items. Please read the guidelines about posting. Remember this is free, with no strings attached and no advertising or sales pitches to you. All we ask is that you learn about us and know that we exist and tell others. We will be offering more in the very near future.

And since I am an Amateur Radio Operator, I thought this would be a nice place to get more exposure for all our ads. I will most likely be keeping the ads online for more than 30 days if you wish at least until we decide otherwise. That is for the Ham Radio Section only. I also will be putting up a ham radio page. Of all the stuff that you all like. Please feel free to send me your ideas.

Andrew
KD4ZGJ

PS. I did not put my email address here because of the spam. You can contact me at my site if you wish by sending mail to admin.....

Thanks for your time all. And happy haming. 73's

That is an exact quote from a telegrapher of whom I asked the question
years ago. I imagine that he might not have known what he was talking
about.

> The sounder makes distinctly different sounds for key down
> and key up, so both the location and direction of the timing edges can

I doubt many telegraphers did a scientific analysis of it, but for most
people I have known, what the guy said seems easier than your version.

By the way Gary, I've missed your posting here where you complain that
the Government is imposing a "subsidy" on hams in the form of an CW
test.
I guess you figured out that this supposed "subsidy" pales in comparison
to the FCC mandated "subsidy" being imposed on us all in the form
of HDTV which you support wholeheartedly.

I am a Canadian and our rules are somewhat different from yours but, I believe our rules state that you can as long as the occupants of the other location don't have easy access to the equipment. Eg if you put the radio equipment, etc, in a locked box and you keep the keys.

I think the logic here is to remember the rules concerning unlicenced people using, gaining access to, your radio equipment.

I believe that Microsoft NetMeeting, v. 2.1 for Windows95, should let
you do this fairly easily. This is essentially a low-quality voice
connection over the Internet. It can be used instead of long-distance phone
calls. The system requires, in addition to the software, which is free, a
sound card and speakers plus a microphone. In addition to this equipment,
both people would have to have a key (or keyer), a keyed tone oscillator,
and a speaker. Put the speaker where the microphone can "hear" it. Again,
the audio quality will be poor, but for internet-based code practice, it
will be good enough. Let me know if you decide to try it. I might join
you.
I forgot to mention earlier that Microsoft provides the "clearinghouse"
or "switchboard" where you would find other people interested in CW
practice. You are asked when setting up this software about how you would
like to be listed in the "directory." You and he would both indicate that
you're interested in CW QSOs, and that is how you could find each other.
The other really good advantage of such a thing is that you can immediately
ask, in your normal speaking voice, for an explanation of what was sent or
for a repetition of some difficult portion.

Most hams will just keep their 2m rig on their favorite repeater.

I usually have mine set to 146.52 (when I feel like having 2m turned on)
since I don't have a regular, favorite two meter repeater. Otherwise
its set to 156.800 since I am more interested in boating than 2m ham
radio.

You make a good point. If you came upon my car while you were driving
down a freeway and saw my callsign plates, would you even attempt to
call me on 52? I don't think most people would bother becasue we just
don't seem to practice 'universal mobile communication'.

I have always liked the idea of having a channel(s) set aside for local
calling or distress and encourage people to monitor that channel(s) as
much as possible. Aviation and marine service have calling and distress
channels and the system works quite well. Why can't a "national simplex
frequency" like 146.52 be designated for calling or distress only?

This makes no sense, unless there is some underlying reason why the
interests of Novice-class hams would somehow be different than General
or Extra-class hams.

>This would drastically change the ARRL. Because then ALL member hams
>would be heard.

All member hams are heard now.

>I bet if you were to look into the director's
>background most of them are probably EXTRA Class now.

More than likely. But, the symptom does not diagnose a problem. There are
numerous other reasons why directors tend to be higher license classes.
According to the ARRL bylaws, any league member who is a tech-or-above-class
license holder, and has been a member for two years, can run for office.
So, ask yourself: why don't more techs run for and get elected to
positions like SM, Division Director, etc.?

Free clue: it has nothing to do with their license class.

> > a universal 2m mobile channel.

I travel the interstates quite a bit. I have one rig tuned to 146.52,
and call on that frequency quite often when I'm on top of a hill.
Consider this: two mobiles travelling at 70 mph are closing on each
other at 140 mph; If both mobiles have a ten mile range, that gives them
a twenty mile window; (10 to the front and 10 to the rear); and the
window of opportunity to talk to each other lasts only nine minutes or
so; If I call every 5 minutes I could have only a 4 minute chat. I also
have a cb tuned to 9 and 19, another 2 & 1 1/4 meter rig that switches to
the closest repeater programmed into my laptop that is running APRS and
connected to a gps receiver. This makes the road time much more
enjoyable as I make trips from Texas to Cleveland and New England. It's
normal now for me to cover 720 miles per day, but I used to go for 1200
per day. I can't do that any more. Jim W0oog/5

I don't know if this qualifies as a "Boatanchor" but I would probably think so if I didn't want one....
I am looking for a real RTTY input and printing station....I am NOT looking for software, a multimode TNC, or any piece of equipment which requires a computer.
I have never seen an RTTY station...but I imagine it is prob very similar to an old printer dumb terminal or an old TELEX station....
If anyone out there has one of these, or can point me in the right direction I would certainly appreciate it.

73
Alex (Getting my ticket finally punched at the end of Jan - Call sign soon to follow!)

PS if you post to the NG an answer pls CC it to my mail box as well....

Welp, you feel free to do that. I, on the other hand, will continue to have
my "hundreds of thousands of dollars" spent in radios, antennas, towers,
amplifiers, and so on. That way, when all the phone lines to your ISP are
busy, your ISP's network backbone connection is down, your ISP is being
brought to its knees thanks to a SYN attack, your ISP's national carrier
has a routing problem, or one of the other hundreds of different reasons
why you can't establish a connection from your house to a common everyday
site like www.yahoo.com, I'll still be chugging along talking to my
companions on the radio while you stare at a screen-saver.

Bill
The easiest way is to go to
http://www.fcc.gov/wtb/prod.html
There you will find form 900 the new electronic form for renewal.
It's real fast and easy to fill out- however there is a 60 or 90
day pre expiration date you may have to wait for.
Go to the site just to be familiar-they now ask for a SSN via the
internet

I base it where I live, the 1x2 and 2x1 calls are gone in 3 land, the 1x3 calls are almost gone guess there are still 2x2s and 2x3s for now.

How's that code coming? You should be up to about 20 characters by now. Hang in there, only a few more days and you will pass that code test and be on HF!

Don't be typing any replies until you pass that code test. In fact stop reading this area and turn off your computer and start practicing your code!

You obviously have time to do it, you just have to decide you want that HF and 40 some CW characters is only a few more days away! Come on, you can do it! Just do it! But I guess your not reading this now becasue you turned off your computer and are practicing your code! <Grin>

Hear you on 75 soon!

(Another helpful tip, while driving down the road to work, every sign you see, run the code off in your head! You see a STOP sign, you sound off in your head: di di dit dah dah dah dah di dah dah dit)

Do it!
See you on the air!

804. Question: How to broadcast??

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-08 00:00:00 UTC
From: aweiss@pomona.edu
Message-ID: <34b42517.58201434@news.tiac.net>
Source record: 182201

I recently noticed that if I hooked up a "rabbit-ears" to my VCR, that I could broadcast the signal on channel 3 or 4 about a foot to a nearby television set. I then put a standard Radio Shack 10db 75-ohm coax amplifier (part# 15-1118B) inline before the "rabbit-ears" and it increased the range of the signal to about 4 feet.

I know very little about television and radio broadcasting, but I would assume that the antenna one uses makes a big difference. So, I was wondering what would be the best (read: cheapest) way for me to increase my broadcast range. Is an antenna the best way to increase range, or can I just daisy-chain these $13.00 10db amplifiers? Is there a single amplifier that would work well?

Also, is there a way to broadcast FM using some pre-made device in the same way that VCR's transmit on channel 3 or 4? And, if there is, wha is the best way to increase the range?

BTW - I realize that this activity violates some FCC rules, but I assure you that I am not planning to start my own TV station. I merely wish to learn more about this technology.

Thanks.

The overall numbers are up a little from last year. And there are many more Techs (which is the entry class).

Cecil wrote: "Most of the guys responding to my internal survey say, `I just don't want to waste my precious time learning something useless to me.'"

Too bad your survey didn't also include a question asking how many hours per week the TV set is turned on. You could have then pointed out that the code can be practiced during the commercials (unless your fellow workers consider the commercials as "precious time"); that would amount to about 10 minutes per hour - the whole family could join in and have General-class licenses in a month or two.

Another good opportunity for practice is during the daily commute; play a code tape and practice "head copy"; this is no more distracting than listening to the AM/FM BCB radio.

Bill,

I would think that trying to operate CW above 50MHz without knowing the code would be rather difficult. It is not easy to communicate with a language one does not understand, wouldn't you agree? I would think this sufficient reason to warrant cw testing for all frequencies allowed to amateur radio where cw is allowed. I also think it is unreasonable to test abilities in only one mode and not the others. (just food for thought)

Here is more food for thought... how about mode related operating permits? Require amateurs to prove knowledge about digital or any other modes before allowing them to operate those modes similar to the old commercial radio license endorsements.

IMHO the biggest obstacle the "No-Code" movement has to overcome is the attitude, "If I had to learn it, you should have to learn it too because it would be unfair to all the hams who already passed the cw test to do away with it." Personally, in the future, I will continue to use CW because I like it and I sincerely hope many others do the same whether there is a code testing requirement or not. In the same breath, I welcome all the "No-Code" Hams to the ranks of Amateur Radio.

>Is an antenna the best way to increase range,
> or can I just daisy-chain these $13.00 10db amplifiers?

Neither one.

Realistically, antenna gain will be limited to about 10dB, which would only double your "line of sight" range.

Cascading amplifiers won't work either. It's a question of transmitted power. Those are receiving amplifiers, which have a maximum output level which is quite low. Beyond a certain point, further increases in input power merely drives the amp into saturation rather than increasing output power.

There are high output amplifiers which would do the job, but they will be quite costly by comparison to the prices you pay on mass produced consumer electronics.

Also understand that the output of a VCR is not spectrally "clean". Broadcasting that kind of signal could cause all kinds of interference problems. It will also, as you noted, be illegal.

>Also, is there a way to broadcast FM using some pre-made
>device in the same way that VCR's transmit on channel 3 or 4?

There are a great many FM transmitters on the market. Not all are legal.

>And, if there is, what is the best way to increase the range?

Same answer as for the VCR.

Regards,

Blake - WB4PLL

I purchased a used one, along with the AT-50 Antenna tuner. I use
them at the vacation home, using a multi-band windom antenna. I can
set up and break down the station for storage in a closet in under 10
minutes. With this set up have worked DX and many states on SSB.
Only regret is the lack of a CW keyer.

>-Jeremy
>KF4RTY

As far as that individual doesn't use it or work on it, it shouldn't be any different than having a repeater at a location where another amateur doesn't reside (like a commercial site or mountain-top).

As long as HE doesn't break any rules, it shouldn't be a problem just to use his location as a site (with his permission).

The control operator is licensed and responsible for the proper operation of the repeater. You will need to make sure that you have a control channel to that site so you can "control it", of course.

IMHO

When I am in a traffic jam on the highway I turn on my CB to find out
what is happening. I can't very well call someone on my 2m rig.
Perhaps if we hams could devise a plan for something like Channel 19
on CB we would turn on our 2m radios instead of the cb.

I'd like to see more hams with their 2m mobiles set 147.520 simplex
as a priority channel for monitoring purposes. I've traveled
extnsively and it is rare to get a mobile QSO on 52. There's
no reason we couldn't foster use of a simplex 2m frequency as
a universal 2m mobile channel.

Cutie-Boy,

I was talking about the Amateur Radio frequency allocations in the
United States, not those of Canada. Just look it up. You will see I am
right. CW is allowed on EVERY amateur radio frequeny on every band from
160 meters through and including 23 centimeters. This is information
pulished by the FCC on July 25, 1989.

Posting for a friend who needs a power supply for a SWAN 500 HF rig, either an OEM unit or suitable replacement. Also, though he can't figure out Usenet, he seems to think he could actually build one if somebody could supply plans :)

Please respond to Bob directly if you can help:

MFJ makes an Antenna Analyzer that is wideband and tunes outside
the ham bands. Some antenna's may not even have a good match and
sweeping your rig, transmitting into high VSWR's might damage those
solid state finals.
I know, you need it to see if your 10meter antenna drifted down to
27MHZ....
Boy , that's a good one...

827. Santec 144uP tone bd

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-08 00:00:00 UTC
From: chambers@midwest.net
Message-ID: <34b47a33.25954522@news.midwest.net>
Source record: 182224

I have a 1983 model Santec 144uP 2m HT. I am trying to add a
Communication Specialists SS-32P tone encoder. After taking out VR1
and D1 it will transmit the tone and I can access the repeater,
but...when I put the Santec's squelch knob in the "TONE" position to
supply power to the board, it will not squelch the radio.
Has anyone got this combination to work, or have any ideas? TIA

Greg - WB9UHR

Well, although illegal, thats the EASY way out to finding out how much
your antenna is off. A "legal" way is to get an SWR anylyzer like MFJ
makes, or any of the other "Rf anylyst" type devices. Rather pricey
tho at $100-200, but easy way to match up antennas without having to
use a tranciever.

The last one isn't really a failure if done with the right intent. You do it at
3:00 am in a co-ed dorm to see who's sleeping with who.

You're getting a lot of the usual crap that goes on here. Don't
understand
why some people think they can withold info that's readily available.

Check out www.qrz.com radio mods database.

You'll also need wideband if you want to use a transverter.

Some people even use it on...well...you-know. But remember, it's
illegal to listen to cellphones. Sorry, guys,
I just couldn't resist stirring the ant farm.

As for tuning antennas, I prefer the noise bridge. You can write a
CAT program in basic that plots the antenna (SWR) vs frequency.

When you get right down to it, it's probably technically illegal to use
ANY signal source outside the ham band to tune your antenna...even
if it's inside a nifty antenna analyzer or GDO. Wonder how many
"rule inforcers" have written to MFJ about their illegal antenna
analyzers????

I noticed in the paper this morning that Tech America (a Tandy
operation) has the small Alinco VHF/UHF rigs listed but don't mention
that you need a license to use them. I'm not surprised. I guess Ed
Juge is no longer in Ft. Worth.

> > 73, Brian

Because they, like you and so many others today have been brainwashed
and spoonfed the glowing story of the infallability and ubiquity of high
technology. *It just ain't so* - even when they have a good
reliability rate, these modern, extremely complex systems do fail- and
we don't even know if the ship had any GMDSS gear installed---or if so,
was it working or did it fail to produce the intended response. We have
already seen here that the GMDSS gear so far, as of last summer, has had
a 100% failure rate.
EVERY distress signal it had generated was false!

You fail to understand that much of what is mandated today is driven
by economy--some wealthy, influential company's economy. What do you
think the ecomomic implications are of a satellite based communications
system that will ostensibly offer worldwide coverage? Ask Bill Gates,
he is investing in one now.

What you can be sure of is that money will be the primary
consideration and the life & safety of any-all of the little-people
users will be way down the scale of importance.

Yes, I know--elected officials and bureaucrats are charged with overseeing the effectiveness of all these schemes, and if you think this means that it will be done correctly, adequately and with safety of life as the main consideration, I'll refer you to some really nice oceanfront property in Arizona.

Why do you think that I support the retention of CW as a serious-use backup mode? Just because I *love* it? Sorry, there's a lot more to it than anything like that. I *know* it. And it works, Proven here once again.

Dick W0EX FISTS #3939

Can't get it UP?
****Join No-Code International and halp destroy Ham Radio!****

Well, ok but I don't understand the difference between OOK morse and an 'unmodulated carrier' I assumed they were the same. An AM signal with no modulation isn't an AM signal, just a carrier right? I agree with the phase noise, but with a clean signal would you not have zero bandwidth? Or is a signal with no noise not possible?

There are a lot out there. Try a few and see what you like. Also the Gordon West tapes are a nice change. I used his 13wpm practice test tape with the ARRL 18-22 wpm tapes. I was copying 18 wpm in about 30 days.

You should be able to find some on the WEB, but if you can not and don't mind making a Long Distance call for several minutes you can download a few from the STAR STATION BBS 215-396-1178 28.800Baud 8 bits No Parity 1 Stop bit. Any terminal program capable of downloading files will get you in.

Good luck with it.

Invented the 640k RAM barrier? That was a hardware issue, had nothing to do with Gates.Well, considering he's the CEO of a company worth several billion dollars, I think it's slightly unreasonable to base your opinion on a few sound bites that may have had a completely different point.

> as a "vision" of the greatest, best-case evoloution of the personal
> computer? IMHO, Gates succeeded mainly because he found
> ways to work around his horrendous LACK of "vision."

I guess his lack of 'vision' came into play when he could see that IBM needed an operating system and Digital was fumbling the ball eh? Christ, an MIT grad walks into IBM and proposes how he can write their operating system and you say this fellow has no vision? Yikes!

> If he
> had had any vision, he would have developed a wide open
> operating system, capable of handling unlimited RAM, and
> kept upgrading it as the hardware technology allowed

Hmm interesting, lets develop software to run on hardware that does not exist yet and hope that they build their micros around it. The debug would have been a little tough don't you think?

> , rather than
> obsessing about downward compatibility.

Yea, your right about that, I'd much rather have to buy all new software the next time Windows is upgraded.

> I'm no computer genius,

I would never accuse you of that.

> but all the computer geniuses I know don't think too
> highly of Bill Gates, and none of them have ever called him a
> "visionary!"

And these geniuses you know have done what exactly to promote computer use in the world? Windows may or may not be the most efficient software but it's a little hard to deny what it has done to the industry, I'm sure they exist but I have not seen a single manufacturing plant or office building that isn't running a MicroSoft product. The increase in data collection and

productivity and efficiency Im sure is immeasurable. If Bill Gates isn't a 'visionary' I don't who would be.

I hate to be a wet blanket, but, aside from the fcc not liking the idea, either will your neighbours.

I would try to keep your vcr close circuit to your tv set. If you want to broadcast, for your own viewing pleasure consider getting an RF amplifier (possibly from radio shack) (not too powerful), putting your vcr as the input and sticking a wire, about 1/4 wavelength (I have forgotten the length) into the output.

But, plese, be protective of your neighbours privacy as you would want them to be as protective of your privacy of their vcr playbacks.

844. 146.52 and monitoring

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-09 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <695b7f$6rn$1@w3eax.umd.edu>
Source record: 181991

Personally, I have 146.52 programmed and included in the scan cycle of EVERY radio I've got - HT, mobile, and base at the house.

I've made lots of simplex 2m QSOs while on long trips, and have frequently been called (and vice versa) by other hams as we passed each other.

A friend of mine has a nice cardboard placard which goes in the back window during trips, which simply says

146.52 446.00

Simple, to the point, and non-confusing.

Argh (%&%ï¿½(()/&%$ï¿½ , Come on, take a look at:

http://members.aol.com/aeimn/ft50/index.htm

You will find everything about the FT50 there.

The Hardware mod by Scot Sykes is working on ANY FT50, my
Software mods are also working on ANY FT50, don't be lasy,
read all articles, problems , ...

I can recommend the Audio mod from Steve Donnel also, it
brings a great improvmend of the Audio Sound.

You can do with the FT50 almost anything, just read ...

Greetings, ...

True, but it might be a fun learning tool for those not licensed or
experienced in the art and craft. Even if only for that, it would
be a worthwhile effort. The exposure alone would be of value.
I could envision that morse training classes could be conducted
via the internet, of an evening, in broadcast or QSK modes.
What an adaptive use of ``hi-tech'' strategically.

But, you are right --- the real thing is much nicer.....(:+}}......

If you are just looking at extending the range of your VCR or cable box to another set without having to run a cable there are several venders that offer a wireless system that starts around $50 and will work for about 100-200 feet. They are FCC accepted and perfectly legal to use.

Hi Andrew,
Jim will tell you to cut diode D-16 on the main board. DON'T DO IT!!
That mod won't work on your rig. What you really need to do it to
cut *all* diodes. That's the only mod that will work. Trust me.
Just start snipping ever diode you see - especially those power-
wasting diodes in the power supply - you'll get out much better
once those pesky diodes are out of the way.

So is your phone number but you learned that and it has two more numbers you have to remember. (grin).

One of the major reasons you had to take a technical exam to got your license was to show that you understood the basics of radio and that you were capable of at least doing the basic operations of any radio transmitters that you had. If it is too hard to remember a single simplex frequency how do you ever remember to stay within the band limits or to use the correct mode within sub-bands? And heck I know a lot of hams that have a list of local repeaters and freqs clipped to the sun visor of the car. How much simpler can that be?

Actually that is really a non-issue with today's radios. I don't know of any two-meter mobiles or ht's that don't have a whole bunch of pre-set channels. You only have to remember it long enough to program it in an empty channel. Most rigs also have a priority channel that can be sampled even when you are on another frequency.

> and most of us have our
> radios set to operate on repeaters (split tx/rcv).

Again, a non-iussue for the same reasons already stated. Use a pre-set channel and it would not be needed. Besides give us a break Les, if remembering a single simplex frequency is too hard what makes you think that remembering two frequencies is going to be any easier? What's the offset? is it high or low?

I hate to say it, but in my opinion you ASKED for it (with both
barrels)!

Asking how to modify high-powered amateur equipment for 27Mhz use on
THIS newsgroup is like stopping by the "fed.gov.dea.bust" newsgroup
and asking where you can buy some crack cocaine.

You have to consider that illegal use of amateur equipment is a
runaway epidemic worldwide in all bands. This problem is starting to
overflow into amateur bands because people with few brains and no clue
will have access to that radio that you want to modify.

Amateurs are understandably TOUCHY about these kinds of activities!

Lets get smart here. CBers only have to remember 2 digits "Channel
19". But we smart hams have to remember 5 digits "52.525" RIGHT!!!!!
Like I am going to remember that freq. My idea of 54.0 would be a
lot easier to remember.

The Antenna Book from ARRL gives a chapter on EMP and lightening protection. You use the same basic methods to protect from both. After all lightening is an EMP (g).

The simplest method is to disconnect the equipment from both antenna and power when not in use. Keep the power cords rolled up short so that the pulse does not induce voltage into them. Keep the rig away from any metal frames or objects that can induce a charge into the rig. Chances are the rig will survive.

You can also provide some protection for rigs that are operational by using good quality ionizing gas discharge devices and rf chokes on any cables (power, antenna, control) connected to the rig in conjunction with a good DC and RF ground system.

Leslie said:

> That freq is too hard to remember. We would need a simplier freq ...
> something like 148.000 mhz ???

Two things wrong with this:

1 -- "Five Two" has been the recognized national simplex calling
frequency for decades. Why "invent" a new one.

2 -- 148.000MHz would be an illegal calling frequency.

> 6 meters would give us more range in the car on a road trip. Maybe
> something like 54.00 mhz FM ???

Similarly, two problems:

1 -- 52.525MHz is the recognized National FM Simplex Calling Freq.
Let's not "invent" a new one.

2 -- 54.000MHz would be an illegal calling frequency.

>would be out of band by 600kc.

Leslie,

The explanation as to why 148.000MHz and 54.000MHz would be illegal
calling frequencies is:

"§97.307 Emission standards.

b. Emissions resulting from modulation must be confined to the
band or segment available to the control operator."

FM transmissions on a "dial frequency" of 148.000MHz or 54.000MHz would
not be confined to a band assigned to the Amateur Radio service.

Because 54.0 or 148.0 FM would put sidebands outside of the band -
all aspects of our transmissions must be in the band, not just the
carrier frequency.

What kind of Klinton ALGORE stooge are you. The CIB has already been desimated by the "ALGORE reinvention of government" 1996 campain, and now some turncoat Demorat wants to do them some more damage. Get a life. If the commission is to heavy with employees, someone should look at the Lawyers, Economists, and Executives, that were hired in place of all the field staff, when the commission needed to figure out how much bandwidth should sell for. The Commission should be run by engineers,like it was 15 years ago, not by politico's, like it has for the last 5 years. Reed Hundt (a FOBH (Friend of Bill and Hilory)) was the worst thing that ever happened to this agency since its beginning. He let go, or forcibly retired 75% of the engineers, who made up the backbone of the technical expertiese of the commission. Now it is just another government politico waystation for good buddies of the Chief Executive. There is no enforcement going on any more, because there isn't the filed staff to do the work. There is no monitoring going on now, because they closed all the monitoring stations, and riff'ed all the staff. These people were the real technical backbone of the commission, not the big shots back in DC. If anyone wanted to fix the commission, they should clean house back at headquarters, and I mean really clean house, like fire anyone who doesn't have a degree in engineering, and triple the field staff, and put the commission back on a technical footing like it was intended to be. This agency was a nice place to do business with in the old days. when you asked a question you got an answer, from a qualified engineer who knew of where he spoke. He may have been an Administrator for the Commission, but he was first an engineer. Same with all the staff, except the secrataries, who very quickly picked up on what the agency was all about, and could handle most non technical questions very well. Now if you ask a question of the commission, there isn't anyone who can be reached by phone, who can give you an answer, but they can get back to you, after they research the question and go ask the few good engineering people who are left.
As far as I am concerened you and Rep. Tauzin can both stick it where the sun don't shine.

Leslie answered:

>If calling on 50.0 is ok why is calling on 54.0 illegal?

Calling on 50.000MHz FM is *not* OK. It is illegal for at
least two reasons:

1. The band segment 50.000-50.100 does not allow FM operation.
(§97.305c)

2. An FM signal at a "dial frequency" of 50.000 would have
modulation products not confined to a band assigned to
the Amateur Radio service. Thus it violates

"§97.307 Emission standards.

b. Emissions resulting from modulation must be confined
to the band or segment available to the control operator."

>
>educate me.
>
>Now if we were running a split for a repeater on 148 with a + then we
>would be out of band by 600kc.

Leslie,

The explanation as to why 148.000MHz and 54.000MHz would be illegal
calling frequencies is:

"§97.307 Emission standards.

b. Emissions resulting from modulation must be confined to the
band or segment available to the control operator."

FM transmissions on a "dial frequency" of 148.000MHz or 54.000MHz would
not be confined to a band assigned to the Amateur Radio service.

Not to nit-pick but more to the point the internet Backbone is based on lower level packet store and forward type protocols. Such as X.25 Frame Relay, and the ever emerging ATM protocol.

> This
> protocol was orginally invented for military use. The strategy
> of non-centralized network means it would be very difficult to
> disable the internet.

Yes indeed it was. But, the military form was and is different than is used in the commercial internet. The military system will broadcast a packet over every available link to a destination with the theory that one will probably get through. The commercial network can not afford to use such bandwidth for the amount of traffic that it carries so it transmits a single packet to the destination using the best route available. If using any transmission protocol other than X.25 there is no error checking within the network to tell the originating end if the packet has reached the destination. And because of speed limitations, X.25 is becoming less used. The receiving end must use higher level protocols to tell it that there are missing packets. (And if it is the first packet in a communication it will never know it has missed something). Because the error checking is done by originator and destination, the delay can be quite bad if not make communication impossible when many packets start to be dropped by the network.

> Think of internet as a web with many
> interconnects. Blast a series of holes in it and yet the web
> remains intact with all remaining parts still connected.

In the United States, the basic high speed backbone of the internet only has a few nodes across the country. Many of these nodes only have two or three links to other prime nodes in the backbone. All of the transmission facilities use common carriers who many times share the same physical facilities. It would not take many "hits" to backbone nodes to kill the net.

> About the only way to disable it would be to simultaneously
> set off hundreds of nuclear bombs emitting EMI over all major
> communication hubs.

You could probably do it with three.

> You would still have satellite communications
> and a large number of cellular phones with PCS ability.

Satellites provide only limited bandwidth and has inherent delay problems to be overcome to be used to replace downed land lines. They do provide excellent emergency communications when using systems designed specifically for them.

Both analog and digital pcs type cell phones depend on the local switching network. In any disaster area these facilities are always overloaded for hours to days after a major problem. The cell sites themselves are often put out of service due to damage or loss of communication with the local network.

Access to the net is almost always through some type of local wire type communications facilities. If these are damaged or overloaded communications will be impaired by this method. There is often a loss of commercial power. Not many computer users have emergency power generators.

Emergency communications must be highly mobile and independent of local power and communications lines. Often emergencies occur in locations that do not have easy access to land lines or cell sites. More often the land lines and cell sites are damaged and can not be used or are overloaded. Ham radio has always provided the resources and mobility needed to fill in and help out when the normal systems break down.

In the San Fran earthquake several years ago I was working with a carrier who had one of their backbone nodes in the city. The node survived the quake and they only lost one of the three links that connected it with the rest of the network. Even though it survived and could have been sending traffic it had zero use for over a week because all of the users had lost local power or the link that connected them to the switch.

So ham radio only uses primitive methods? How about spread spectrum, satellite, data, only to mention a few.

> After all, why should someone spend hours, learning how to tap out
> mechanical
> noises on a brass key...

Because it is fun for one thing. They love the "art" of radio and want to be proficient in it. How about the pride of having accomplished something by putting in a little work rather than just have it handed to them on a silver platter?

> and then spend hundreds of thousands of dollars on
> receivers, transmitters, tri-banders, towers, antenna tuners, etc., in order

Hundreds of thousands of dollars? Hey CB you can build a cw rig and get on the air for a hundred bucks..... But of course you would have to learn the code to do that.

> Today, anyone with $500 (or less) in their
> pocket, a phone line, and $19.95/month (or less)

Don't hold your breath on this one. If the FCC and local phone companies get their way we will all be paying a per minute charge for internet access using dial phones by the end of the year. The industry is talking that this is already a done deal...

> can purchase a used Pentium
> computer and accomplish the same thing, regardless of band conditions,
> atmospherics, man-made interference, or signal jammers.

And you are proof positive that using the internet one does not even have to have a brain to be able to talk to usenet.

> Maybe it's time to pay
> our final respects to "the old girl" and lie her to rest, gracefully,

So what is stopping you from doing just that? I sure don't see anyone keeping you chained to this newsgroup or to your radio. Unless you want to admit that the only reason you are around here is to be the little troll that you are.

> before
> the government and the commerical interests do it for us. Think about it.

Just wait till the government and commercial interest do what they want to with the internet.

> "Where's that big 'ol CB RAMBO??"

At home in the trailer park using mommy's aol account.

You obviously do not have the remotest concept of
the FCC's mission & purpose.
The agency NEVER was, and is not now, intended to
be your personal resource for technical information!
That was only something that personnel did on a time
available basis to promote goodwill. Unfortunately,
those few people in the field offices who were willing
to do this for the public were the most productive
employees of the commission. So productive and busy,
in fact, that they did not have time to play politics and gain
the favor of upper level FCC managers. When the
field offices were cleaned out two years ago, these
hard working people were the first to go because they
had not played the corrupt political game and kissed
upper management's ass. As a result, what's left in the
field offices now are the protected political class, the
ass kissers, good ole boys, and sons of FCC managers.
In other words, the people left in the field offices are
worthless trash, lazy & incompetent. Thus, you get the
impression that the field offices are understaffed. No,
they are not! They just don't have the quality people
anymore.
Rep. Tauzin has some faults, but he is on the right
track. Don't sell him short. He wants to finally rid the
FCC of the worthless political trash, downsize it, and put
people in positions who are dedicated and honest and
will serve the public.
The fraud, waste, and abuse taking place at field
offices now would shock the public, only if the media
would report it to the public.
The only beneficiary of the 1996 FCC/CIB downsizing
and reorganization is private industry. The quality FCC
employees who were forced out by FCC management
are now working in private industry, probably making
a lot more money too!
That's another thing! Don't blame all the problems
today on Reed Hundt. He had a job & did it, as ordered
by Clinton. The real culprits for the mess that the FCC
& CIB are in today are the same career FCC/CIB
managers who have been with the FCC for decades.
They sold Hundt a bill of crap and in the process back
stabbed their own subordinates. AND guess what, the
same worthless, corrupt FCC/CIB managers are still

on the job today, in the same positions, only difference is that they all gave themselves big fat promotions, cash bonuses, and pay raises. Just like the former Southeast Regional Director Carl Pyron. He lost his region, but his FCC manager buddies gave him an all expense paid government move to his home state, Texas, and set him up in a lavish office where he micro manages the coffee mess today, for the same $100,000 a year he made when he mismanaged the Southeast region for years from his office in Atlanta. Career bureaucrats NEVER change and NEVER go away. Pyron retired years ago, came back as a rehired annuitant and is STILL on the FCC's payroll! He's probably the single biggest example of fraud, waste, and abuse in the FCC/CIB today! And, there are many others like him.

I was thinking SSB, thanks for correcting me.
Maybe we could use 145.0 or 147.0 in the 2m band and 53.0 in the 6m
band. We (hams) are not really setup to work car to car on a highway
traffic jam situation.

>
> Les
> W4SCO

????? 146.52 to hard to remember?? Everyone I know has it programmed
into memory and can go there with a turn of the dial. Besides, all the
radios I know that are made have a function that allow you to disable the
auto repeater function. Besides, if you think about your proposal,
you'll see why it can't work without a physical repeater. 1/2 the people
won't be able to hear you as they must set the opposite split to hear
you.

YOU tx 146.385 rx 146.985 ME tx 146.985 rx 146.385 what's wrong
with this picture??

Good idea tho...more people should monitor .52 in areas not served by
wide coverage repeaters. And even then those repeaters should be
monitored by someone. Usually all yopu get back is a squelch tail

Yep! NONE of your signal can go outside of the band limits. If you operated on 54.0 or 148.0 your modulation would take your signal outside of the band which would earn you a citation for out of band operation.

For renewal of your amateur operator/primary station grant, you may file your application electronically using FCC Form 900, Application for Electronic Renewal of Wireless Radio Services Authorizations.

You can only use Form 900 during a 120 day renewal window preceding the expiration date shown on your license grant.

FCC Form 900 may only be submitted electronically. No FCC Form 900 document applications will be accepted.

You may access FCC Form 900 on the FCC web page at:

http://www.fcc.gov/wtb/electcom.html

Click on any item number for filing instructions. After electronically filing the form, click on Electronic Renewal Query to view or print the information submitted. Upon successfully submitting Form 900, click on the "Continue" button. Although there is no fee for renewal of an amateur service license grant, the screen will prompt you with a Fee Remittance Advice, FCC Form 159. You will see the message "No Fee Required." You will be required to enter your Social Security Number or your telephone number.

You may also use a FCC Form 610 paper document to apply for renewal.

Order the 610 form from (800) 418-FORM (3676), or download it from the web at:

http://www.fcc.gov/formpage.html

or call the FCC Fax-on-demand system (202) 418-0177 from the handset of a facsimile machine.

Mail your completed Form 610 (no fee) to the following address:

FCC
1270 Fairfield Road
Gettysburg, PA 17325-7245

It isn't probably illegal, it IS illegal. Also, the antenna analyzers
use minimal wattage - less than a modified Xciever puts out for sure.

Keeping amateur radio clean has nothing to do with holes in the ozone
layer, clean water, clean air... It has everything to do with
preventing ham radio from being a heap of crap like CB has been.

Buy the right equipment and uphold the itegrity of good amateur
operating ethics.

Yes...me too. I have two microwaves and I regularly check them for
leaks and they have very little if any radiation along any axis coming
out of them. He must be buying those microwaves Dave Letterman throws
out the window!

Leslie, I missed the original post but I thought I'd dump in my two cents
worth. If anyone thinks I'm wrong, dump one in.

50.0 Mhz would be fine as a calling frequency for CW, since CW has zero
bandwidth and your signal would not go below 50 Mhz.
54.0 Mhz could be used if you were on lower sideband since your modulation
would not take you above 54.0 Mhz
The same would apply for 2m. I think what the others were trying to point
out is that if your signal is 3Khz wide while running phone you can
potentially have emmisions outside of the band if your operating exactly on
the edge.

Hmmmm...Since every member of the public is going to be forced to
purchase a very expensive all-new technology television to replace each
one currently in use, it's not the government but we individuals who
will foot the huge bill for HDTV. That's after all the mandated
extremely heavy investment by each and every braodcast station for all
new plant.
This marks the end of free off-air TV as we have always known it since
the beginning of TV broadcasting. Now *There's* something for you to
bitch about.
Yes, it's all-new technology, and surely a better picture will be
received by all. But I don't happen to believe the difference between
HDTV and the digital DSS system I now use will be anywhere near worth
the investment required. It has as good a picture as I want and would
willingly pay for, and I'm one who appreciates good video, having worked
as a TV broadcast engineer.

This is absolutely the most ridiculous statement I've seen you make yet. Gee why should we incarcerate people who steal? I guess your attitude would be since they are going to steal anyway we should teach them easier ways to do it eh? Guess it doesn't matter much to you that it's against the law huh? Well uh, gosh Judge every one else is stealing cars, all I wanted to know is how I could do it to.

To answer your second question, yes, I'd rather see him do a 'hack job' and in the process destroy the finals, screw up the audio section, and with any luck screw up the VFO so bad that he cant talk to anyone. Then he could unload his 830 at a swap for $100, I'll buy it, restore it to original spec and enjoy it on the ham bands. (where it belongs). If he wants to convert it that bad, let him study RF circuits like the rest of us. Perhaps after having some good discussions on .homebrew he'll realize how much fun it might be to build and operate an amateur station and communicate with others who share the same interests, instead of continuing with the CB mentality of adding a 'kicker' and cranking up the mic gain in hopes of reaching more 'skipland'.

So, maybe it's time to come full-circle. Admit that amateur radio has served a useful purpose in the history of communications in this country, but also be brave enough to admit that it's approach, it's means, and it's methods are now very primitive, as measured by today's cutting-edge modes of communication. After all, why should someone spend hours, learning how to tap out mechanical noises on a brass key...and then spend hundreds of thousands of dollars on receivers, transmitters, tri-banders, towers, antenna tuners, etc., in order to communicate around the world? Today, anyone with $500 (or less) in their pocket, a phone line, and $19.95/month (or less) can purchase a used Pentium computer and accomplish the same thing, regardless of band conditions, atmospherics, man-made interference, or signal jammers. Maybe it's time to pay our final respects to "the old girl" and lie her to rest, gracefully, before the government and the commerical interests do it for us. Think about it.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Okay, Mr CB Rambo, I said I wouldn't do it, but I'm coming up for the bait. Why do the naysayers and doom&gloomers and the I don't need no stinkin' ham radio guys and bootleggers and frs types insist on congregating on the HAM newsgroups, where they could find help, friendship and encouragement but find only enmity because they insist on attacking the precepts of the group? Why do you seem to take so much pleasure in earning and receiving discourtesy and disrespect?
I'm certain your views would meet with more approval on the CB newsgroups, and that you could engage in less combative dialog there. It reminds me of a man with plenty of friends in his side of town who goes into a bar in another part of town with the purpose of getting himself into a fight where he is outnumbered them to one. It's like a KKK guy hanging out on a Black Panther newsgroup, or vice versa. Yes, you have honest opinions that you genuinely believe in, and no, I have no business telling you that you cannot state them, but when you know that you will not be able to convert anybody over to your way of thinking, whether you talk nice or "tough", why bother bringing them out in this ng?

I think you will be much happier if you voice anti-ham opinions where they are welcome, where they are shared, and return when you sign with a callsign instead of a "handle". There is no need for turning controversy into argument, or open dialog into shouting matches.

Thanks for the info, Gary. I forgot about the tickertape machine and the Jacqard loom. I hadn't forgotten about the punchcards... my mother was a keypress operator for a while.

In the Navy on my ship the ECU, which we would call CPU now, used punched tape for loading the program. (For the main propulsion control and surveillance equipment.)

I would still like to see an actual landline sounder or a good drawing. I was hoping somebody would post one.

Gary writes:

One problem ... ham radio may be the only method of communication
during or after WWIII (2000+) or if a major meteor hits the country
(prediction is for Nevada in June 1999), earthquakes, volcanos, etc.
Phone system will be down, the only things still going will be
satellites and ham radio.

That freq is too hard to remember. We would need a simplier freq ...
something like 148.000 mhz ???

6 meters would give us more range in the car on a road trip. Maybe
something like 54.00 mhz FM ???

Really? Could you please list those frequencies for us? The rules
state that CW is allowed everywhere on every band. (And if the
digital machines continue their downward progression to the lower
band edges, expect to start hearing more and more CW in the traditional
voice segments.)

Because the freq is too hard to remember and most of us have our
radios set to operate on repeaters (split tx/rcv). Now if a universal
repeater pair could be established so our radios listen on one 2m freq
but are set to transmit on another 2m freq, that might work.

A visionary?!?!?!?! Um, I don't think so. I would call Mr. Gates
>many
things, both good and bad. But a visionary he is not! Now those who
>work
for him and under him.....well, that's another story

ROFLMAO!!! Bill Gates a "visionary?" The same guy who said
something like "all you'll ever need is 64K of RAM and an 8-bit
operating system?" The guy who invented the 640K RAM barrier
as a "vision" of the greatest, best-case evoloution of the personal
computer? IMHO, Gates succeeded mainly because he found
ways to work around his horrendous LACK of "vision." If he
had had any vision, he would have developed a wide open
operating system, capable of handling unlimited RAM, and
kept upgrading it as the hardware technology allowed, rather than
obsessing about downward compatibility. I'm no computer
genius, but all the computer geniuses I know don't think too
highly of Bill Gates, and none of them have ever called him a
"visionary!"

: I noticed in the paper this morning that Tech America (a Tandy
: operation) has the small Alinco VHF/UHF rigs listed but don't mention
: that you need a license to use them. I'm not surprised. I guess Ed
: Juge is no longer in Ft. Worth.

You expect a notice of license need in a *newspaper* adv? I think that is
a little much to expect. They *DO* mention you need a ham license for
those rigs in the flyer I received the other day.

Not quite true. The internet is based on TCP/IP protocol. This
protocol was orginally invented for military use. The strategy
of non-centralized network means it would be very difficult to
disable the internet. Think of internet as a web with many
interconnects. Blast a series of holes in it and yet the web
remains intact with all remaining parts still connected.
About the only way to disable it would be to simultaneously
set off hundreds of nuclear bombs emitting EMI over all major
communication hubs. You would still have satellite communications
and a large number of cellular phones with PCS ability.

One major difference is that one supports an ancient technology, and
the other supports a change to a newer and supposedly better
technology.

Now, if the Feds were subsidizing B/W TV on 8 inch screens, you might
have a case.

The only program I have tried for this is Super Morse. It's a DOS based program that can use, but does not require a sound blaster card. I used it mostly to send "random" qso's to copy and "random" words spelled backwards (to make guessing more difficult). It and the ARRL tapes worked for me. The only thing I would caution you, is that if you practice listening to "cookie cutter" type qso's you start to just listen for the details that will show up on the quiz after, you won't really do a decent job of copying code at that speed, but if you copy the random words spelled backwards the qso's are easy to copy. Sort of like the goofy sentences the ARRL practice tapes use, you just can't guess what the next letter is. Just my 2 cents.

Good luck
Brian

But many mobile rigs can have a priority channel set which
is monitored as well as the single repeater freq. you may
want to listen too. As to remembering the frequency, why
is that an issue at all. Most mobile rigs today can have
40 or more sets of frequencies programmed in. It'd seem
pretty easy to just program 146.52 as one of them. I have it
set as channel 5 on my HT which I use as my mobile
rig. I also don't understand the fact that you mention
the split/offset repeater operation as being a problem since
most (today probably all) VHF rigs can have the offsets set
differently for each programmed channel or no offset at all.

YAESU FT-50R Expanded Transmit 120-230, 315-505 MHz
[FREEBAND MODIFICATION]

1. Remove battery
2. Remove the Ni-Cd sticker
3. Slowly lift off the keypad and carefully locate the jumper pads
4. Locate and unsolder jumper number "1" (see picture below) it is a solder blob
between 2 pads.
5. Locate and unsolder surface mount resistor "A" (see picture below) be carefull!
It is the first resistor on the from left
6. Reinstall the keypad with the two screws
7. Turn radio off
8. Press down and hold the tuning knob and lamp button while turning on the radio.
VIEW: looking down with keypad removed

```
*** ***
= ***** * ***
I ********************
* ---------------- *
I* | [FREEBANDER] | *
I* | _____________ | *
* YAESU *
I* ================ *
I* ================ *
* ================ *
* ========== *
* *
* ------------------------------ *
* | ABCDE |*
* | IIIII |*
* | : : : |*
* | 1 2 3 |*
* --------------------------------*
********************
```

1010. The vfo should display 144.000 Press FW. (this step may not be needed but
it worked for me)
Power off.
11. Powerup with lamp/ptt/knob held down. It should now be in tune mode with something new
(BAND= A 1) change it pressing the knob for 1/2 second and then turn the knob to FREE.
(BAND=FREE)
12. Power off and back on NOW RADIO DISPLAYS 50~540 590~1000 no gaps!!!
(Dont change any other function or you could screw up alot of adjustments here)
IT will tx where ever it locks. One radio 122~231 and 309~502 and another radio was
120-232mhz and 315-509mhz. This varies radio by radio.
Tx is only miliwatts near the edges (DONT TX OUT OF BAND!!!).
Rx locks after about 74mhz. it is very def in the 220 band tx is miliwatts.

no tx above 502
but varies radio by radio.

13. If you have the ADMS 1 software you should have a copy of what was in your radio.before you
started.
14. Copy from the radio. Save and name this file FREEBAND. This is to be saved as a clean copy for
future use.
15. Copy from the radio again (or just copy the file) name this file MERGE.
16. Merge the old file to this file and send to radio.
17. With your palms facing forward put your thumbs in your ears, wiggle your fingers and stick
out your tongue at your Users manual while it is open to page 10.
18. Then update page 10.

Dont make the FCC and Yaesu angry at you by trasmitting where you are not supposed to.

This information came from a Newsgroup message by Alan Judd, information gained

from the Web Page at
http://members.gnn.com/hca/ft50/index.htm and my own attempts at restoring the radio using this
FREEBAND Mod.
Please give Alan Judd great thanks for subjecting his radio to T&E R&D (trial and error research and
development).

Subject: Yaesu FT-50R Guide V 1.1
From: childers@garlic.com (Bill Childers)
Date: 10 Jul 1996 21:52:28 GMT

The (In)Complete Guide to the Yaesu FT-50 Version 1.1

Compiled by Bill Childers, KE6VVW

Disclaimer & Other Nonsense
The information in this document is a guide to the FT-50 ONLY.
Having had more than a few radios in my amateur experience, I
understand how most hams wish to learn as much about their rigs as
possible. I have compiled this guide to allow other people to
learn more about the radio without having to search all over for
information. I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

History

Version 1.0
1st introduced.

Version 1.1
Added: Game mode, Changed High Power Mod to "Internal System
Alignment". In this section I also detail the squelch and S-meter
adjustments. Also added info to the bug on the FTT-12 Keypad.

Introduction
The Yaesu FT-50 is perhaps the most unique VHF/UHF Handheld
manufactured today. It's made to MIL-SPEC 810, for dust,
splashproofness, and vibration. Out of the box, it has not only
dual band 2m/440 capability, but wide FM receive and AM receive as
well. In addition, it receives 76-200 MHz, 380-500 MHz, and

700-900 MHz (Cellular Blocked). It has one of the fastest scan speeds for an amateur HT. It also has the unique ability (w/ ADMS-1C software) to interface with an IBM PC running Windows and have memories and settings uploaded/downloaded. In addition, it has DCS (digital coded squelch), ARTS (auto-ranging transpond system), and Yaesu's excellent transmit and receive battery saver features. It also uses Yaesu's extremely efficent FET power module that allows for 5W+ of output power with a 9.6V battery pack. With the optional FTT-12 keypad, the unit also performs CTCSS decode, DTMF paging, and also incorporates a Digital Voice Recorder! All of this functionality in such a small package makes it my rig of choice.

Problems (Bugs)
Unfortunately, the FT-50 is plagued by a few bugs. None of them are very serious or life-threatening, just a bit annoying. First among them is its Wide-FM receive. Apparently Yaesu engineers didn't put a wide enough filter in the unit, and some of the bandwidth of broadcast FM signals gets "chopped off". This means that the rig is near useless for listening to music on the broadcast FM band. It works marginally with voice only on the same band. My opinion on this problem: If you want to listen to music, bring a small Walkman or other transistor radio with you. The '50 does an adequate job of bringing voice signals in on broadcast FM, so it's good for listening to emergency broadcasts.
The second "bug" lies in the optional FTT-12 keypad. The manual for the radio states that you can set up a "voice mail" type of functionality that lets your radio operate unattended and record calls for you. This mode doesn't work correctly, although the built-in voice recorder works great. It seems that the unit will playback the wrong voice partition. The problem appears to be in the DTMF page-answer-back area. If you're buying the '50 and FTT-12 solely for this purpose, DON'T! It doesn't work and there's no current workaround.
The third bug has been complained about a bit. It seems that some '50s suffer from a low Tx audio problem. This is due to a factory adjustment that is set a bit on the low side. It is easily fixed. (See Factory Adjustments below).
The fourth "bug" is synergistic with the ADMS-1C software. If there is some kind of problem in downloading a file to the radio, the software aborts with an error, and the rig is left with it's memories cleared in a "limbo" state. This state is actually the European band plan, and if done properly, the rig can be modified to receive even more frequencies&#65533; which will be described later. (See modification section) However, if you want to return the rig to its natural state, simply download a blank frequency file (NONAME.RDF) to the unit. All should be well.

Factory adjustments
If your rig suffers from the low Tx audio problem, here's how to

fix it.

1. Remove the battery and antenna.
2. Remove the "NiCd" sticker on the heat sink. If you remove it very carefully, it's possible to re-install it later with the same stickum that's on it.
3. Look in the cavity where you removed the sticker. Proceeding from left to right, here's what you'll see&#65533;
Phillips head Screw (Holds the keypad in)
Small Silver Potentiometer (VR1001&#65533;VHF Deviation Adjustment)
Small Silver Potentiometer (VR1002&#65533;UHF Deviation Adjustment)
Small White Potentiometer (TC1001&#65533;DONT TOUCH! CTCSS Tone Adjustment!!!)
Phillips head Screw (Holds the keypad in)
4. Take a small Phillips head Screwdriver and turn both VR1001 and VR1002 about 1/8 turn clockwise. This will increase the VHF and UHF deviation and fix the low Tx audio problem. If it's not enough Tx audio, simply turn both pots another 1/8 turn. Make sure to turn both pots the same amount!
5. Replace the NiCd sticker, battery, and antenna.
6. You're Done!

Internal System Alignment (May not work on some radios)
NOTE: This setting appears to work on radios that have NO MEMORIES programmed. You might want to try STEP 3 before clearing your memories. If step 3 doesn't work, you probably need to clear your memories. BE CAREFUL with these settings&#65533; it's possible to really mess the rig up by setting some funky squelch or something&#65533; you might want to write the default settings for your rig down.

1. Select 2m VFO frequency.
2. Turn the radio off.
3. Push LAMP, PTT, Knob, and PWR at the same time. The rig will turn on with the squelch open, so turn the volume down!
4. The '50 will display "BAND xxxxxx" where xxxx may differ depending on your radio and whatever mods you may have performed.
5. Turn the top knob. There are a variety of settings available. Here is a listing of them:
&#65533; HSSQ: Squelch Hysteresis Adjustment, adjusted by the dial.
&#65533; THSQ: Squelch Preset Threshold
&#65533; TISQ: Squelch Preset Tight
&#65533; S1LV: Low-Scale S-1 Adjustment.
&#65533; S9LV: S-Meter Full Scale Adjustment.
&#65533; HIPO: Hi Transmit Power Adjustment: Should be calibrated for 5W (Can be pushed higher with a 13.8V Supply)
&#65533; L3PO: Level 3 Power Adjustment: Should be adjusted for 2.8W.
&#65533; L2PO: Level 2 Power Adjustment: Should be adjusted for 1W.
&#65533; L1PO: Level 1 Power Adjustment: Should be adjusted for .1W.

6. Select the adjustment you wish.
7. Push in the Top knob. There will be a "s" that appears next to
the displayed number.
8. Rotate the knob to change the setting.
9. Change other settings, if desired.
10. Push the knob for more than 1 sec to save the profile.
11. Select 440 VFO frequency.
12. Repeat Steps 3-10 to adjust the UHF Settings. UHF Settings will
have a "U" in front of them.

Modifications
The FT-50 is extremely easy to modify. The first modification is
performed for you at the factory but for those of you who
accidently disabled it, or changed it here it is.

Extended U.S. Receive Mod (Expands receive from 144-148 & 430-450
to 76-200, 380-500, 800-999 'cell blocked') NOTE: All
memories will be erased.
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.
3. The unit now has U.S. Extended Receive.

MARS/CAP mod (Extended Transmit Mod: app. 144-159, 420-470) NOTE:
All memories will be erased.
Don't transmit on bands that you're not licensed for!! Besides
being illegal, it creates problems for people using those
frequencies.
1. Remove battery & antenna
2. Remove NiCd Sticker on Rear Heat Sink
3. Loosen (Don't Remove) Philips head screws on rear that hold
keypad in.
4. Use screws as thumb holds to press keypad out.
5. Remove screws.
6. Remove Keypad.
7. Under Keypad on Left Side there is a series of Solder Jumpers.
They are labeled in white from 1-3. Only #1 will have solder
jumpering it. Remove the solder, being careful not to damage or
touch any other components. WARNING: If you're not good at
desoldering, or have shaky hands, you might want to have someone
else do this for you. It's REAL easy to damage the rig.
8. Reinstall Keypad. Be careful of the O-ring around the keypad.
Make sure it's not twisted or damaged, as the waterproofness of the
unit could be compromised.
9. Install sticker, battery and antenna.
10. Hold down Knob and Lamp keys while powering the unit on.
(Extended Receive Mod as above.)
11. Completed!

Super-Hyper Awesome Mod The mother of all Mods!!! (Requires
ADMS-1C software and MARS/CAP mod to be performed)
Receive: 76-999 Mhz (No displayable holes!!!)

Transmit: 120-221 Mhz, 320-499 Mhz (AGAIN, Don't transmit on
frequencies where you're not licensed)
NOTE: This mod will disable ARS (automatic repeater shift) and will
set 2m and 440 repeater offset to
weird numbers. Make sure you enter repeater offset and +-
shift manually. Repeater offset needs
be set once for the rig, then it should be able to be
forgotten about. It will also clear memories.
Remember above where I mentioned the ADMS-1C software having a bug?
Here's where the enterprising and curious ham can take advantage
of that. This mod will install the European band plan in your
radio so without the MARS/CAP mod you will lose the top portion of
your 2m band.
1. Are there frequencies in your radio? Don't want to lose them?
Simply get the data from your radio as it sits you can "merge" the
frequencies later. Save the file.
2. Perform the MARS/CAP mod as outlined above. Get the data from
the mod and name it USA.RDF.
3. Attempt to send the same data to the radio. In the middle of
the transfer (around 50%), pull the adapter cable to the PC out of
the radio.
4. Thanks to the bug, your radio is now in European mode! Perform
the Extended Receive Mod by holding the Knob and Lamp keys down
while turning the unit on.
5. Now, the Automatic Repeater offset doesn't work. There's no
workaround. Note that the 2m offset has been changed to 0.00. Go
to the menu by holding down the knob. Go to SHFT, Option 7. Press
the knob. Turn the knob so that it reads 0.60. Press PTT.
6. Now, turn off the radio. Put it back into clone mode. Read the
data back from the radio to the PC and save the file as EURO.RDF.
7. If you want to enter frequencies manually or using ADMS as
normal, go ahead. Everything should work. If you saved
frequencies as above, open EURO.RDF and "merge" the frequencies
from your USA.RDF file into it, and save it as another name. Then
send the modified EURO.RDF (your filename) file back to the radio
using the "template" file EURO.RDF. You're done!
8. To return the radio back to the U.S. band plan, send the USA.RDF
file back to it.
Note that I have no way of measuring the sensitivity of the
frequencies or the output power of the rig outside of the ham
bands. The 220 coverage seems to be very poor, however, the radio
does display 220 frequencies. It won't transmit on our 220 bands,
though. 800 Mhz receive is vastly improved.

```
Game Mode
The FT-50R includes an interesting "game" that's programmed into
it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).
2. The display will show GAME on the left side, and Spd 1 on the
```

right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. Higher numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from left-to-right. As they come, you are supposed to push the number on the keypad that makes a sum of ten, followed by F. Example: 6 appears, press 4, F. If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

Kantronics makes a KPC-9612 which can send out pager data from
it's built-in packet BBS. Just hook it up to your radios.

146.52 has already been established as the nation-wide simplex calling frequency. All it needs is better promotion.

> 6 meters would give us more range in the car on a road trip. Maybe
> something like 54.00 mhz FM ???

I don't think there is a 6 meter nation-wide simplex calling frequency. At least I have never heard of one. But I do agree with your point about range.

However, the 2 meter frequency will very likely be more active, simply because there are more 2 meter radios out there at the moment.

By the way, for those who don't know, the nation-wide simplex calling frequencies, for the other bands, are... 223.50 for 1.25 meters, 446.0 for 70cm, 906.5 for 33cm, and 1294.5 for 2cm.

Dwight Stewart (KF4URZ)

REPLY...

You have my support on this Bill. By the way, I think you mean 146.52, not 147.52. How can we go about promoting this frequency better nationwide?

I had heard that 146.52 is supposed to be the nation-wide simplex calling frequency, but I have yet to hear a single word on this frequency. Perhaps a little better promotion is all it needs.

And, it we want a separate emergency frequency, maybe we could use a frequency near this as an emergency frequency (like 145.52 to make it easier to remember - one MHz down from the calling frequency).

Trying to keep up with repeaters, using directories, is difficult if you travel great distances in one day (and I sure would not want to be thumbing through a repeater directory if I'm laying in the ditch after an accident).

A _well monitored_ simplex frequency would be a great solution.

Congressman Tauzin's staff is accepting any information
concerning fraud, waste, or abuse in the FCC.
They are documenting reports of conflict of interest, such
as FCC employees running private businesses,
misappropriation of government time, rude treatment from
FCC employees, theft of government property, etc.
If you go to a FCC field office and observe employees
sitting idle doing nothing or pretending to be doing something,
document it. Sometimes they will appear to busy when a
citizen is in their office, then go back to sleeping or surfing
the internet as soon as the citizen leaves. So visit an office,
leave, then go immediately back & observe the same
employees who looked "busy" a few minutes before.

Send any information to:

Rep. Billy Tauzin
Chairman, House Subcommittee on
Telecommunications
Washington DC 20515

In a free market system, there would be *NO* governmental subsidies.
Where governmental subsidies exist, socialism, the enemy of freedom,
exists.

I would say the economic implications of a totally wired planet
(including 3rd world access to an RF internet) are enormous!
Economies and nations will be transformed. There may even
be massive wealth redistribution.

This is so important as to make long term amateur radio concerns
regarding such an issue almost irrelevant. Sure many short term
techno forecasts are often overly optimistic. But it will happen.

The ACC RC-85 and many other repeater controllers can send the standard
two-tone paging sequences if you enter specific touchtone commands.
You can easily recrystal pagers like the motorola spirit from 15x.xxx to
the ham 2m band.
Kinda neat if you have an ARES or RACES repeater, and have some non-ham
volunteers that need to be informed. you can page them...

Good Morning, and Happy New Year

I would like to invite one and all to the

First Annual
Gwinnett Amateur Radio Society
Tech Fest and Chili Cook Off

This event is free to all .. and if you feel so inclined, bring your
best chili along for the judging.
Our event will be held on Saturday, Jan 17 from 10am to 2pm.
We will be at the Central Gwinnett Baptist Church on Gwinnett Drive, in
Lawrenceville.
If further directions are needed, feel free to e-mail me directly
Talk in will be on the GARS Repeater, 147.075+

Subjects to be Covered:

HF Techniques Soldering VHF/UHF Equipment
Space Communications Packet/Digital Radio Antenna Building Workshop
Radio Mathematics Radio Control Home Brew Radios
ARES Net Control Training Logging Methods
Cross-Band Repeating Mobile HF GPS/APRS
Passing Traffic Efficiently Paging Features Explained

Feel free to publicize this event in your areas and on your repeaters.

John Sokol, K9AOK
Publicity Chairman
Gwinnett Amateur Radio Society

Thank you

I am looking for a list of modes for amateur radio in a format that links them with their alphanumeric designator. I would like to find one that shows the modes as names (ie. SSB, CW, RTTY, etc) and pairs them up with their equivalent designator (ie. J3E, A1A, etc).

If anyone knows of a location or source for this info, could you email me at this address.

Thanks and 73.

Yo Doc <yodoc@aol.com> wrote:

>The guy who invented the 640K RAM barrier
>as a "vision" of the greatest, best-case evoloution of the personal
>computer?

Uh, Larry, while I'm no fan of Bill Gates, at least try to be accurate
in your technical discussion.

The "640k barrier" was not invented by Microsoft. It was an outcome of
the architecture of the original 8088 CPUs, which could only address
1MB of physical memory space. After deducting some space in high-memory
for Expansion ROMs, system ROMs, video memory, and so on, what you were
left with was 640K of usable memory space for addressing RAM.

If you're going to blame anyone, I think you need to place the personal
blame squarely on Cecil's shoulders, because he works for Intel (and
being one of those "super-techo-genius hams" that Stevenson thinks are
the only people worthy of holding an amateur license).

>he would have developed a wide open
>operating system, capable of handling unlimited RAM,

Not technically feasible. Easy to say in hindsight.

>kept upgrading it as the hardware technology allowed, rather than
>obsessing about downward compatibility.

Downward compatibility was an absolute must, and was not vendor-driven,
it was consumer-driven. By the time the 286 CPUs came out, IBM systems
were solidly faceted in American businesses. Then we saw 386, 486,
Pentium, Pentium Pro, and now Pentium II CPUs enter the market.

Now, tell me Larry, what do you think would have happened to the
computer marketplace if *EACH TIME* a new CPU came out that it was
not downward compatible with its predecessors? Likewise, what would
have happened to the market if each time a new version of the OS came
out, it was not downward compatible?

>I'm no computer genius, but all the computer geniuses I know don't think too
>highly of Bill Gates, and none of them have ever called him a
>"visionary!"

Most "computer geniuses" realize that the entire Gates fortune was achieve
by the typical way most new millionaires make their money: being in the
right place at the right time. Its also reported that Gates basically stole
CPM to create the first release of PC-DOS, but I don't know how accurate

that is (based on Microsoft's behaviour over the years, I don't doubt the rumor at all.)

It will be interesting to see how HDTV develops. Congress is saying that this is a terrible give away of frequencies which are worth unimaginable amounts of money. The broadcaster sees this as meaning that he has to spend an enormous sum to buy all new equipment, build a new tower and so on. Actually if the system does develop, there will be the same number of channels when the present broadcasting system ends. The channels are only expensive when they are scarce. Recent auctions have only brought yawns from potential biders.

Looking at Japan where a form of analog HDTV has been in operation for years, the number of sets sold has been so small as to be silly. No one knows if the same thing will happen in the United States. TV audiences are shrinking each year and I think that few people will be willing to pay $5000 to watch laxitive ads in vivid true to life HDTV. When I point this out to people who are still in the TV business, they say, "Everyone knows Moore's Law that says semiconductor prices will drop ...". Yes, but the display end of the set, the picture tube is where much of the money lies and I don't see any magic answer to putting a HDTV display in everyone's living room at amything like a reasonable price.

In addition to the cost, there is very little information about the broadcaster's service area. Analog tv fails gracefully as the signal strength decreases. Digital tv will either produce a good picture or no picture with very little in between. If the broadcaster's service area is greatly reduced, his profit picture will also be reduced.

My guess and it is only a guess is that there will be so little interest in HDTV that congress will ask the FCC to drop the whole thing and we will still have NTSC for even more generations.

Best regards,

Art Borg

52.525Mhz has been established as the nationwide 6M FM Simplex calling
frequency for as long as I can remember (I had a mobile on that freq 36 years
ago).

'SCO' needs to go back to the books. Both his suggestions would put him
'out of band'.

I have read the following. Can anyone confirm this:

I have read a news post that you could no longer perform
the programming mod listed below. The reason was stated in the Oct 20, 1996
artical that "The firmware inside the radio has been changed so that pulling
the pc to radio plug during a download will not toggle the radio into EURO
mode. The change was made in radios with the 3rd and 4th digits of the
servial number greater then 05.

Do you know anything about that? This would have allowed wider coverage and
tx ranges w/cell.

Thanks and 73 de jim, kd4zot

Software Mod for EURO mode:

Here is the extended TX mod that was on the internet. Please proceed at
your own risk!!! This mod opens up TX in VHF 140-174 MHz and UHF
420-469 MHz

1. Take the battery off.
2. Peel the NiCd warning sticker off of the radio.
3. Remove the two screws that were under the sticker.
4. Gently pry off the keypad paying attention to the gasket.
5. You will be looking at 3 jumper pads.
6. The 1st pad on the left will have a blob of solder on it.
7. Carefully remove the solder blob.
8. Reassemble the radio paying close attention to the gasket insertion.
9. Hit the reset keys as mentioned in the manual.
10. Extended TX mod is complete.

Hello, I'm looking for any mods on the alinco DR-150 wasn't able to find any in the QRZ database so I'm resorting to finding someone that has done it on their own.

Tnx to anyone who has this information.

944. I would be in favour of no code hf 'if'...

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-09 00:00:00 UTC

Greetings

1. Under the present rules, as I understand they apply, I am an avid supporter of needing to know the morse code to gain access to the hf voice sub-bands.

2. 'However', based on what I have read in this, and other radio, forums, and one-on-one chats with other amateurs,

I would be willing to support a no-code hf access licence 'if' that licence holder was not permitted to gain access to hf voice, as it is presently available on hf today.

If the person's sole activity on hf was packet, pactor, rtty etc. I would have no arguements to him/her getting on hf 'without' having to pass a morse code test first.

I just don't want someone to gain access to hf ssb/am/fm voice without first knowing the morse code. I realise that most amateurs, and non amateurs, feel that it appears to be contrary to logic that one would need to know an unrelated, seeminly oldfashion, mode to use a modern? mode, but, I, personally, believe that there is a good reason for this stepping stone arrangement.

To me, learning the code signifies, that you are aware that there are other modes out there besides voice and you are capable of decoding at least one of them. Also, with cw and the digital modes so close to each other, frequency wise, you are often exposed to the digital modes while listenning to cw. With the voice subband, that is basically all you are exposed to. Only voice, except with sstv, is in the voice subbands. No other modes are there. You are not, in my opinion, exposed to any other mode, but accidentaly tuning.

It has little or nothing to do with the itu etc, I just personally believe that when someone's primary mode of communications is voice, vhf-fm or hf-ssb, that is all they will use. I know many of you will disagree with me but I find that those who have learned and use the morse code 'tend' to be more aware of the other modes and may, at times, tend to investigate them more.

With voiice that seems to be it, no looking around at anything else.

Now someone will argue about vhf packet and the basic licence but we are discussing hf not vhf/uhf.

I would be most interested in other amateurs and non-amateurs opinion about this idea. I don't expect this will be a popular idea, but, it is a possible way of creating a hf no-code licence and still protecting the morse code and helping amateur radio, all at the same time.

> discarded for the next hundred years or so except in player pianos.

Wrong.

The original Morse set used an inker, not a punch, and it was used
for several years on the Baltimore line, and the New York lines,
and others adapted various forms of inking and writing devices during
that time, also (1840's). None used punch tape of any sort. The power
required to operate a punch was not practically available then, and
the best they could do was operate a relay armature with a pen attached
to it. One used chemical electrolysis to do the writing.

The sounder was developed from the local relays that were used to
key branch circits with separate batteries and inkers. I am not
aware of any of Morse's work using punched paper tape in any of
the early literature.

> You may have noticed that all really really old keys have two sets of
> contacts... MAKE and BREAK. I would assume ... well never mind what I assume.

Wrong again.

Morse's original keys from 1840 were a simple strap key adapted from
european ``finger keys''.

The keys of the 1840's era, when things began to take off were further
adapted from the european ``finger keys'', and only the British seemed
to develop dual contact keys in the 1860's or a little later. They
were used as late as WWII in telegraph sets of various kinds, including
the famous TG-5 box telegraph set.

> "ENGINEER'S MINI-NOTEBOOK, Communications Projects", by Forrest Mims III, Radio

> side-tone and open the contacts up enough to hear them good.

The back contacts on the keys were used to automatically close the line
circuit at the cessation of keying, as opposed to the American closer
switch lever. The British called those double circuit keys, if my
memory is not too foggy, today. Hams often find the Type 19 set keys
and the TG-5 telegraph set keys at hamfests, and those are probably
the most common double circuit keys you will find, today.

> telegraphy, and Spark are all on/off modulated with Morse Code, yet they are
> completely different modes and the term CW applies to only one of them.

Correct, CW applies only to continuous waves generated by arc converters
or vacuum tube and related later electronic devices.

Marconi tried to make spark continuous wave by phasing multiple spark
gaps (rotary gaps) synchronously in his ``Timed Spark'' circuits, but
it never caught on.

The generation of Continuous Wave (CW) began in 1907 with the experiments
of Poulsen (based upon experiments about 1900 by Duddell) of an arc
generator or arc converter as it was called then. This was basically
a carbon arc lamp placed where a spark gap would go. Eventually, it
was placed in a strong magnetic field in a closed chamber with hydrogen
gas and alcohol vapors to stabilize the arc flame. The 100kw arc
converters left over from the transoceanic circuits of WWI became the
basis for that big hunk of iron cyclotron atom smashier that still
sits somewhere at Berkeley.

Vacuum tube oscillators originated in 1912, in DeForest's lab and at
the same time by Armstrong in his regenerative circuit. They were adapted
to transmitting use by General Electric (I think) about 1914, and were
not practically used until about 1918 (A few army tube sets were available
in France in WWI, but not many, based upon 5 watt tubes and a very few
100 watt GE pliotron tubes).

> As far as difficulty in learning goes, I doubt that it would be much more
> difficult to learn Morse telegraphy with a well-designed sounder than with an
> oscillator. It's just whatever you get used to first, I think.

That is basically true. I like the resonant ring of a good sounder,
myself, but they don't QRQ too fast. When my OM was in the army in
the 20's at WVB he used to read the circuits by the clacking of the relays
in the transmitters as the ops were sending (from about 10 miles away),
and knew when to switch transmitters or frequencies by reading the bloody
relays on the fly. But, he learned on morse circuits around 1910. So,
reading relays was a natural. I often use the relays in the keying lines

of my Hartleys and my BC-375 instead of sidetones. It just sounds neater. Modern rigs don't make much relay sound anymore.

If you need references, Morse's original work from 1848 is reprinted: ftp://piobaire.mines.uidaho.edu/pub/Glowbugs/Historic/ look for the vail*.* documents. See also, Jones, Alexander, 1852, ``Historical Sketch of the Electric Telegraph'', New York, George P. Putnam, 194pp, for details of the early keys and methods of writing telegraphically. For information on the double circuit keys, I can get that, but I don't have that reference handy. For details of the spark and arc CW generators, see Elmer Bucher's 1917 Practical Wireless Telegraphy.

George, you do know, of course, that WD5CID's SUPERMORSE program supports modem to modem QSO, don't you? You can use either a key on the keyboard for a key, use the regular whole keyboard like a terminal, or hook up your trusty straight key or bug. I really like the program... it got me from almost nothing to Extra+ in just a few weeks. I got it for download, version 4.16, at my website. http://members.aol.com/RCrusoe/ab5vh.index.html . The site is still pretty crude as I don't know much about this stuff yet, but I'm working on it. Anyway, you should be able to download the prog there. It is a sel-expanding zip file with the EXE extension, so be sure and save to disk instead of OPEN it, which will just shotgun the program files into your download directory. You have to make a directory, move SM416.EXE to the directory, then run. The file will explode into the complete program. It can be made to run in WINDOWS fairly well. If you just plain like Morse Code, leave this puppy running all night at 35 WPM while you sleep. In the morning, turn it down to 25 or 28 and check out how slow it sounds at that speed! You can send text files to the speaker, random groups, randomly generated QSOs, regular words, a sample randomly generated code exam like the ARRL VEs use, whatever. You can hook up a straight key and practice your sending too. There is provision for interfacing with a radio, too. Though RX is rather involved, a 2N2222 stuffed inside a DB-9 hood is all you need for sending perfec code from the keyboard. Weight and timing are fully adjustable. There are a lot of learning modes, so it is a good program for elmering with.

>This isn't a plan.

Really? Why not? It lacks detail, but it allows everyone to be as
effective as they wish to be in supporting their own desires and
needs. Any "plan" I came up with is bound to be contrary to what you
might want.

>What *positively* do you recommend. I can do all kinds of things to be
>involved, but they may be futile rather than effective.
>
>What specifically is your plan?

I've posted some suggestions in the past here in this group.

>So far, I find nothing of value in your communications on this subject.

I can't help that.

>Suprise me with something worth reading.

Surprise me by doing some research; Deja News is your friend. Or by
presenting a "plan" of your own as a pattern.

Or would you rather just sit there and attack what I've said?

The Kenwood 28A is a 2 meter with 400 mhz receive.
Is there a keypad modification available for this radio?
I would like to expand the 400 mhz receive capability of this radio if possible.
I met someone at a hamfest that had this mod, but he said it had it when he bought it.

In Ahoskie, NC, where my parents are receiving DSS, bad thunderstorms are the routine. Signal strength get to be about 89% at its worst, while it typically receives at 93% signal strength (the on screen bar graph). I have actually never seen the signal fluctuate to the point where it became unwatcheable, besides once in a snow storm where the dish became half filled with snow, and the LNB was fully frozen with ice. Evidently the ice blocked the signal to the point where the dimished focusing power of the dish became insuffecient.

958. WANTED: Looking for low power rig

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-10 00:00:00 UTC
From: Neil & Marsha Robin <nrobin@aa.net>
Message-ID: <34B7EB63.70C6@aa.net>
Source record: 181895

Looking for a low power (QRP) HF SSB rig for maybe 15-20-40 meters. 12 volt battery operation. The battery will be no larger than 5 AH @ 12 volts and is recharged off of a solar panel. Daily operational time will be limited to a few minutes.

Thanks, Neil, WA7NBF

Anyone know of any mods for the Icom IC-T7A handheld? I'm looking mostly for Tx in the commercial VHF/UHF range.

Much thanks in advance.

Iain

Mike hit it on the head, besides if you really want to expand the
transmit, you can do it illegally for 19.95 witb the purchase of a mod
book available at local HRO or supplier. For another ham to give you
that info would be in violation of code of ethics and you are on your
own when you do decide to transmit out of ham bands. If you have a valid
MARS license you can get the info your looking for with no problem by
showing proof of to the manufacturer or local HRO or other supplier.

There was a piece on the local CBC radio outlet on Friday, and I thought also on the six oclock local CBC tv news (I might be mistaken about the latter, since I was "watching" CBC tv via an FM BCB radio) about hams providing communication, here in Montreal and in Quebec City.

This has been the worst emergency that I can think of here, and I've lived here all my 38 years. There were some snow storms in '71 and '72, but I don't remember them being as bad. It's an odd situation, because the weather hasn't been all that bad. It's been warm, and I had no problems walking around, though some areas probably are worse. But it has done tremendous damage to the power lines and the trees. Last night, was the worst of the environmental situation that I've seen; it was way too icy to get anywhere. I slipped at the bottom of the path, and came right back in.

It has stretched out quite a bit, and the problems tend to compound on others, though there have been few injuries.

There have been reports that in some areas the cellphones are failing, because their batteries are dying. Yesterday, they were reporting that something like 40,000 phones were not working, and though I can't remember the details, I thought it was so mething more than broken wires.

People can't buy things because the stores are closed, or as the week wore on, no cash. Today, when I was in a grocery store, they were having problems dealing with bank cards.

There was very little preparation, which probably is the key to emergeny preparation. Until it happens to you, it is too abstract to think through the details, and all the lists of things to have on hand and be prepared

can always be put off till tomorrow.

My power was off for only 24 hours, and that at the end of a week of power problems elsewhere in the city. As long as the security of the power was there, it was easy to wait till later to get some batteries and food that you can eat without heat.

I'll not have the problem again, though there may never again be a problem. I'm going to get that 12V gelcell battery that I've been planning to get, just in case, to be able to power a radio and some small bulbs, which would be definitely better than AA cells and a flashlight that wasn't working all that well.

This doesn't really answer the question about hams, because I don't know the situation. I realize in this situation how nice it would have been to have a 2m rig. I think generally, more people are aware of the need for backup power, and yes, if hams don't have backup power the communications gear means nothing.

Clearly you have not tuned around the HF bands and conducted your own personal survey of activity of the different modes operating there. You'll find several times more CW stations than packet, and if you had ever operated HF packet you would know that it is not dependable because of lack of noise immunity. Most of the brACKing going on on HF is retries, retries, retries.

I volunteered for emergency communication at Croix Rouge Canadienne
(principal quart).

The cellular phones were working "fairly well" (under no electricity
condition... the commercial guys aren't so stupid to shut down) while
I was on duty so we didn't have to handle too much communications, but
we did for general info such as bridge closing info, highway closing
info etc. which couldn't be obtained through simple cellular phone
calls.

If they didn't have cells, I was sure that we were more busy.

Aside from the fact that a TS830 can not be modified to listen to or transmit on 11 meters, no law abiding amateur is going to provide you information to violate the law. Stick to 4 watts out and be happy, or get a license.

Greetings,

Retesting in order to renew an amateur radio license is the wrong way to go. It involves the spending of more money and other scarce resources. Like another poster already stated, there isn't, as a while, anything wrong with our current ham population. I am an extra class operator, and I have retained the knowledge necessary in order to participate in the areas of amateur radio in which I choose to participate. I do not need to be retested!

Laura, I had an idea for emergency comms. Since many computers generate
RFI, M@S@ could switch his on and off in order to generate a new mode
using morse code. It will be called Interrupted Continuous Wave
Computer Generated Radio Frequency Interference (ICWCGRFI for short).
Anyone within 20 feet should be able to copy.
If only the computer manufacturers would have given us a key jack
instead an on-off switch.
Sayonara,
Brian/N0iMD

Hi Andrew
I think that many amateurs are getting rather frustrated, and annoyed,
at the number of non amateurs asking amateurs how to modify amateur
equipment for, what amounts to, illegal use.

REPLY...

Thanks John. I figured one had to exist, but none of my books mentioned it. After checking several books, with no mention, I was beginning to think that there was no calling frequency for 6 meters.

That frequency will get programmed into my radio immediately.

REPLY...

That is true. I don't exactly live alone around here, but there is
little activity on the radio period (including this frequency).

There are many occasions where hours can go by before I hear any voice
on the radio (except myself). And everybody seems to go to bed around
eight (when they roll up the streets). :-)

That's not because of CW. Any person can walk into a ham store or radio shack, buy a 2 meter rig and start transmitting if they want to be a lid. The HTs and moble rigs today even have automatic repeater offsetting. Just turn them on and go. That's why the problem is bigger on 2 meters. It's a hair more complex for HF but if someone wanted to raise hell enough there they'll do it.

REPLY...

Okay, since you think all operators should are capable of decoding at least one of the other modes, I think all Amateur operators should be required to learn how to send, and receive, packet manually (by hand and ear).

Morse code is the past, and the digital modes (such as packet) are the future. Because of that, such a test requirement would be much more relevant than the Morse code test requirement.

And, if we are going to require this, and so many older operators don't know how to send/receive packet manually, we should require all operators to be re-tested for their ability to send, and receive, packet manually.

Of course, most people would say this is utter nonsense - just like I say the Morse code test requirement is utter nonsense today.

By the way, your idea to restrict hf voice access is utter nonsense also.

Hi Keith,
At the risk of sounding like one of the *self policing ego maniacs*, I
have to ask; is it a good idea to admit to using amateur equiptment on
commercial bands.
Just an observation.

It works great, no noticeable difference at all. A few days back we had one (1) inch of rain falling per hour here in Atlanta. I turned the set on to see what effect the rain was having, none!!

I have the new Sony 3rd Generation AD3, that might make the difference? And i am getting Direct-TV and USSB. My signal strength is about 85-87/100.

REPLY...

I only mentioned Portugal because that was where the original message came from (and where GSM was first mentioned). However, I was not aware that GSM had spread so far around Europe and the US.

The point I was trying to make in my message was that I had heard that some phones, and some repeaters, were still not digital, or encrypted, on some GSM systems (or at least that is what I have heard).

With luck, he might be able to hear these with a regular radio with the right frequencies (assuming such a repeater is nearby), but it would be very limited because most of the signals, on even those repeaters, would be digital and encrypted.

Of course, I could be wrong. All I have is second-hand information from a radio buddy in Germany (I am heading there soon, so have been digging for info about this type of stuff).

Okay...so I'll ask you again. As an amateur operator, with your own interests in mind, would you rather he do his freebanding with a TS-830 or with a modified CB which would then be attatched to a cheap, dirty linear to make it equivalent in output to the 830. Which one of these scenarios would cause the most harm to YOUR operations if you happened to live in his neighborhood?

I disagree completely.

A decade is a long time. Rules, regulations, and technology changes.
It is not a bad idea to require a ham renewing his license to take
an examination on these changes, to ensure s/he is aware of all
the new regs, etc.

The only problem I see with this idea is that the examination needs
to be a *single* exam at each license class (e.g. you don't make people
renewing go through the cycle of 2 to 5 examinations all over again).
It will require a great deal of work at the VEC level, maintaining a
current question pool for an examination which needs to be timely.
This means constant, yearly updating of the "pool" for the renewal
examination, a great deal of work for the VEC system.

>The hams we have now are just fine. We just need more of them.

I see a bunch of people who would be better suited in the FRS. I
don't think we need more of them. We need more dedicated communicators
and technical innovators. We don't need more mundane "pick up milk on
the way home, honey".

That might be the stated government purpose, but its too bad that the
existing testing system doesn't accomplish it in the least. Instead, all
it does is test a person's ability to commit to short-term memory the
knowledge needed to correctly answer. I know several people on different
VE teams in this state, and they all say the same thing -- people come in,
take the test, walk out with a license, and forget everything they
learned. It seems the only people who consistantly have trouble passing
the examinations are those who actually try to LEARN the material, rather
than just learning the correct answers.

Actually, there is one amateur allocation where OOK Morse is *prohibited*.
But analog voice isn't allowed there either. That's the 219 MHz band. It is
data mode only. Of course you can do digital voice, so I suppose it would
be technically correct to say that it is an amateur band where voice is allowed
but OOK Morse isn't.

Exchange of information is not illegal. If it were, modification books and CDs would not be on the shelves of AES in Wickliffe. It's a little thing called the First Amendment.

However, how such information is *used* is a totally different story, and just as many hams have made questionable mods on equipment as CBers.

Hi,

I have access to a GE MVP split site repeater system. The goodies include...

VHF TX 25W
UHF TX 20W
with PL Tone Boards
VHF uplink & downlink transceivers
Crystal elements
Microphone & Speaker

purchase price around $200.

Is this a good system, worth $200! Should I buy it?
Your thoughts and opinions please would be most helpful.

Thanks and ' 73

Try QRZ, they have a lot of mods and there is a good chance that they
have what you are looking for. Also your MARS group should be able to
assist you with the mod. Good luck and enjoy you MARS operations.

Yeah, there's not going to be a windfall for the government out of this thing
by selling vacated spectrum. Most of the vacated spectrum is going to be
low VHF anyway, and that's not very attractive to most of those hoping to
develop new wireless services. The government may receive a windfall
of another sort, however, in the form of sales taxes collected on all the
new sets that will have to be purchased, and income taxes on the profits
of those making and selling the sets. That's a tidy sum. And it'll have a
multiplier effect in the economy just as any other high tech boom does,
and that means even more tax proceeds for the government.

>Looking at Japan where a form of analog HDTV has been in operation for
>years, the number of sets sold has been so small as to be silly. No one

>but the display end of the set, the picture tube is where much of the
>money lies and I don't see any magic answer to putting a HDTV display in
>everyone's living room at amything like a reasonable price.

Japan didn't mandate a switch to HDTV. The US has mandated a switch
to DTV (note *not* HDTV). The cost of a DTV receiver should be no greater
than for a DSS receiver, less considering the economies of scale of replacing
300,000,000 sets over an 8 year period. HDTV sets will be more expensive
than plain DTV sets, but there won't be much HDTV programming to watch
in the early years of the changeover because there's no existing inventory
of HDTV material to fill the hours. HDTV receivers will be the province of
the videophile and the first adopter (and the rabid sports fan). And they are
free with their money.

It is worth noting, however, that Panasonic showed a large screen HDTV set
at CES which will go on sale this fall which *doesn't use a CRT*. They've finally
found a way to economically make large solid state displays (and Moore's law

does apply to them). People are going to want a large screen TV that they can hang on their wall, and getting HDTV capability in the bargain is just a bonus. I predict this will be a hot item next Christmas.

>In addition to the cost, there is very little information about the
>broadcaster's service area. Analog tv fails gracefully as the signal
>strength decreases. Digital tv will either produce a good picture or no
>picture with very little in between. If the broadcaster's service area
>is greatly reduced, his profit picture will also be reduced.

The FCC is aware of this, as are broadcasters. The OET developed the Longley-Rice model to predict DTV coverage contours and arranged allocations so that no station will have less than 97% coverage of its previous service area after it commences DTV transmission. The FCC has assured broadcasters that modifications to their DTV licenses will be permitted if field tests don't match the model during the 8 year phase in period. So there's no reason to believe that broadcasters will lose significant market penetration due to the switch to DTV.

And viewers will be assured of better pictures because of the all or nothing nature of DTV, IE no more snowy ghosty marginal pictures (which is what a *large* fraction of the current NTSC audience sees). The viewer will either have a perfect picture or no picture at all, and the overwhelming majority will have a perfect picture. Even a NTSC resolution picture is a glorious thing if you can get rid of the transmission artifacts of the analog system. And real HDTV is simply breathtaking. The jump is at least as big as the jump from B&W to color, and look how fast that happened.

>My guess and it is only a guess is that there will be so little interest
>in HDTV that congress will ask the FCC to drop the whole thing and we
>will still have NTSC for even more generations.

I don't think that has a snowball's chance of happening. The switch to DTV will happen. There's too much money involved for it not to happen. The phase in may stretch past 8 years, but it won't span across generations. The set makers see 300,000,000 sets to be sold. The broadcast equipment makers see $50,000,000 per station and production house to be made. The chipset makers see bundles to be made. The computer industry sees a huge bonanza as well because they'll get penetration of high res digitally driven displays in every home, and that opens the way for huge software sales. Etc.

They'll drive the changeover (if you want to know what Congress will do, just follow the money, and there are *huge* amounts of money involved here), The consumer will have to either buy the equipment or stop watching TV. I don't see the American public giving up watching TV. Realize that cable and other programming sources have to switch to DTV too. So there will be no option to continue using NTSC. You'll buy a DTV set or quit watching television. Tell your family that they can't watch TV anymore and see how well that goes over. Somehow I doubt they'll be content to return to books and magazines. You may have to put off buying that new car for another year, but you will buy a new TV.

Realize that the switchover to color from B&W was virtually complete in
8 years, and there was no mandate involved there, B&W sets still worked.
The price differential was about the same too (in constant dollars). I'm
convinced the changeover is going to happen pretty much on schedule.
I'll even predict you're going to see broadcasters petitioning to turn off
their power hungry NTSC analog transmitters early because DTV audience
penetration will warrant it.

Realize that there are only about 5,000,000 viewers, out of 260,000,000,
who are in that situation. Most broadcasters (and all cable operations)
have written off the very rural viewer already. He isn't counted in their
ADI, so he doesn't generate any revenue for them. If he wants a good
picture, he's stuck with satellite. But satellite TV will be DTV too, so
he'll still have to buy a new set. (And yeah, that means current DSS
receivers are going to be obsolete too.)

Your argument might have some merit, if packet were on-off keying, and
not frequency-shift keying.

>Morse code is the past, and the digital modes (such as packet) are the future.

Yeah, people keep claiming this, but in reality its nothing more than their
personal opinion.

Where are you located at?? Get with me in email and I'll have the info
you need by then...yes there is a +DC input for the exciter and
the rcvr (the 7amp fused feed to the control head) that uses the
smaller pins...the large pins are for the PA only

If you are speaking 147.52 with a PLUS offset of 600 kc, it WILL put you
out of band. That comes to 148.120 MHz.

147.52 with a MINUS offset of 600 will put you at 146.920, which may or
may not be a used frequency your area. As for simplex, then as long as
you are not causing intereference, I see no reason why it can not be used.
I used to use it quite a bit for simplex, and still do on some occasions.
I can't say for sure now as I have no charts to refer to at the moment,
but I seem to remember reading in a chart somewhere that it IS a simplex
frequency.

Just my 2 cents.

You seem to be hung up on this lesser of two evils train of thought. So someone your neighborhood says, "I need your help, Im going to steal your car tonight and use it for the weekend, you'll get it back on Sunday so do you want me to break the windows to get in or just leave the door unlocked and the keys in the ignition?"If the guy chooses to run illegal power and splatter all over the band so be it. Im not going to help him do it 'better'. As far as my amateur operations, if the guy is splattering enough that I cant hear someone on 10m then Im quite sure he'll be tearing up TV's and VCR's for miles around. About the first time 'Bubba' misses a good football game Mr. Trashy Amp can answer to him.. Now if he was running legal power and had trouble I'd be more than happy to help him clean up his signal as to not interfere with others in the neighborhood. See the difference Rambo? Why not just run the CB the way it was intended, what's so wrong with playing by the rules?. Your so hung up on the 'attitude' of amateurs take a look at what your asking them to do.

I really like the part where you say "with your own interests in mind" I have everyones interests in mind, my neighbors TV reception, they guy who wants to learn about ham radio, the CB'er who runs 4 watts but cant hear anything because someone down the street is freebanding with 100 watts. I guess thats the real difference in our perspective on helping someone 'freeband'

>
> "Where's that big 'ol CB RAMBO??" "I wanna hear him TALK TOUGH!!"

Hmmm didn't know becoming a 'better citizen' had anything to do with CB or Amateur radio but OK.There is no "upgrade" to hambo land, it's two completly different services. Rambo I'm not interested in trying to recruit anyone from CB, if they have an interest in learning about radio they will seek out and find someone to help. If they are not interested that's fine, not a damn thing wrong with enjoying CB radio as a hobby, we had some great round tables back in Jr. High School on the CB and none of us needed to run TS-830's to talk to each other. If you know of someone who wants to learn more about radio I'll be happy to tell them anything I can about amateur radio, just don't expect me to warm up to someone who wants to illegally run high power, with a veiled threat like "well if you don't help me then my signals are going to interfere with your amateur operations"

Do you think becoming an amateur would look more attractive if we were all helping people to break the law by modifying radios? It certainly would not have looked attractive to me. I guess if a drug dealer moved into your neighborhood and asked which do you prefer, that I sell drugs to your kids on the street or deliver them to your home where they can be safe, you'd take the latter eh? I mean after all he's GOING to do it anyway right? To quote you Rambo "Which one of these scenarios would cause the most harm to YOUR" children? Im definitely not comparing selling drugs to breaking the law by running an illegal radio, but I'm sure your smart enough to get the point.

>
> -Jeremy
> KF4RTY

You as trustee (the callsign on the system) are also the main control
op....any other LICENSED amateur who can CONTROL the system legally
and designated by you to do so IS also a control op....

You don't need the rcvr site to be at a ham's location...
my 1st 2 mtr rptr was split site.....one site was
at a Novice's house (obviously he couldnt be a control op)..
the other end was at a General's house....with UHF link of 2-3 miles.

As long as you have CONTROL over the equipment (remotely is fine as
long as it meets the rules of such!) and limit access of the gear
(put it in a locked cabinet), you're perfectly legal...

Dwight I put an old GE Porta-Mobile on 52.525, I get a call every once and a while on it here in Detroit, when I'm mobile with it I give a call every 8 to 10 miles or so, it's not anywhere near as active as 146.52. Someone explained it well when they spoke of two cars traveling in opposite directions at 60 mph you have a QSO time of maybe 5 minutes. I've found 52 gets real busy when traffic comes to a standstill on a major freeway, once coming back from the U.P or Upper Peninsula part of Michigan we had about 15 guys in a round table while we waited for an accident to clear. They're out there, sometimes you just have to give a call.

Tim

> traffic jam situation.

Your call must be vanity or else you never read Part 97....

EVEN SSB on a band edge is illegal...you would never operate SSB
exactly on 4.0 Mhz (top end of 75).....ALL of your bandwidth MUST
be inside the band....SSB is 3 Khz wide....besides there is no
SSB at the top of 6 that I know of.....and calling channels for
FM have been around for DECADES!!! You obviously have not been
on the VHF UHF bands for long (Im beginning to wonder if your
call is bogus......or new vanity at least!)...Get a copy of the
FCC RULE BOOK by ARRL....though it is not 100% correct in bandplans,
its the best out there now....and explains it in easy to read English.

52.525 has been around as long or longer than 146.52 as a NSF (national simplex freq).....Yes, ALL FM bands have their "universal" calling channel...
> However, the 2 meter frequency will very likely be more active, simply
> because there are more 2 meter radios out there at the moment.

Very true!!!

> By the way, for those who don't know, the nation-wide simplex calling
> frequencies, for the other bands, are... 223.50 for 1.25 meters, 446.0
> for 70cm, 906.5 for 33cm, and 1294.5 for 2cm.

The 906.5 and 1294 freq are in questions....not much is settled above 440 Mhz as for national bandplans..in some area, 903 or some 902 freq is used for FM calling..its somewhat regional above 900 Mhz (regardless of what the ARRL says in the rptr directory)

For 6 SSB, it CAN be 50.110, 50.125 (+/- 5) or 50.2! 50.2 is a
new proposed freq that has not taken hold of much!

>
>Oh No ! Spew reincarnated as CB Dumbo.........

It's not hard to put two and two together.

Let's look at some similarities between the two:

1) Drew trashes ham radio as does cbrambo.
2) Drew recently moved to Kansas from central Florida. (He made a post about this last summer and then went offline for a month to move and settle in) Posts on ks.misc indicate cbrambo has moved to Kansas recently from central Florida.
3) Both get hung up on spelling and grammatical mistakes when they can't come up with an argument.
4) Both post from AOL, which makes it easy for creating multiple screen names/aliases under a single account.
5) Both admit to be licensed hams that have used the exact phrase "passed the hazing ritual" in regards to morse code testing.
6) Both are obsessed with daily and nightly happenings on 20 and 75 meters.
7) Both advocate freebanding and operating illegally within bandspace reserved for licensed amateurs.

Of course, the above is just a coincidence and doesn't prove a thing. Right?

I assume this is a facetious question, if not I refer you to part 97, and the requirement that all of any amateur signal fit within an amateur band. Any signal exactly on 54.000 MHz or 148.000 MHz would have at least half of the signal outside any amateur band. You do the math!

KF7IL,
>Bill.

There are several different ways. First, you can go on line after the 22nd of January to the FCC site, move to the license renewal section and fill in the form 900. Second, you can call 1 888 CALL FCC, and request that a 610 be sent to your address, fill out the 610, return it to the address at the top of the form 610, after signing it, and putting a stamp on it, or you can contact one of the VEC's set up and request a form 610 be mailed to you. You can also download the pdf file on the FCC web site, print out the first two pages, fill out the necessary information, and mail that back in. The fcc web page is at www.fcc.gov

Good luck!

Source record: 181999

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel.
Made in Chicago. Excellent running top-end three speed tube unit
from late 1950's or early 60's with extra features. Has separate
optional Webcor compact mini-suitcase speakers that fold into
little suitcase. Handles 7 inch reels. Has top-end options for
its time. Weighs about 38 lbs by itself. No mikes, missing
small piece of cover plate on bottom about 2"x 3" for access
(Just screw in any plate to cover if you wish), have SAMS
photofacts manual for unit. $100 plus UPS Shipping. Will pack
it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military
tube tester as well -- or guitar or bass amp -- or 486 66Mhz
computer cpu with at least 8 MB ram if you've updated your
CPU to Pentium.

Foreign buyer welcome.

1035. FS/SWAP: Simpson 360 Digital Volt Ohmeter $25 B/O

Newsgroup: rec.radio.amateur.misc
Date: 1998-01-10 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <696j1h$j5j$7@csu-b.csuohio.edu>
Source record: 182000

SIMPSON 360 DIGITAL VOLT-OHM-MILLIAMMETER. Bought it and found I could not test it, because it uses a three prong unique sized Simpson extension cord that appears to be no longer available from Simpson (I tried to buy it). It has a battery compartment for battery powered field use, but one of the metal contacts need replacing so I could not test it that way. The point is I don't wish to put any money into it if I can't buy a power cord for it. I wanted it for bench use. I would guess that it does not run, but maybe it does? Probably good for someone who wants a back up parts unit for their Simpson 360. It's a shame, because the thing is a super unit in nice physical condition. Do not have leads or manual. $25 or best offer.

Plus UPS Shipping costs which are not much. I'll pack it free and bring it directly to UPS to get you the lowest shipping rate.

-OR- Will take old running complete decent VTVM in trade.

Another pretty good one, my favorite, is SUPERMORSE 4.16. It can be downloaded at many ham websites, including my own,

http://members.aol.com/RCrusoe/ab5vh.index.html

but do not open the file at the site... it is a self-expanding zip file with the .exe extension. Download it, scan it for viruses, make a directory, move the file to the directory, then run it and it will explode into the full working program. There is an icon and a PIF file in case you want to run it from Windows.

I sometimes use it to key my rig right from the keyboard. It can be used to copy, though the doc doesn't give many details about RX interfacing.

There are a lot of good learn modes and practice modes. It is a viable program for VEs to use for code exams.

"Hard work?" Not really, Tim. Most any good program will have you doing 5 WPM in a week or so. Start out on the right track... ton't "learn" the code from a piece of paper with dots and dashes on it. You will start counting dits and dahs instead of just getting used to the sound of each character. That's what you want to be able to do... hear the SOUND of a character and automatically write or think that character.

Beleive it or not, this is easier to do if you hear the characters at 15 to 20 WPM, with spaces in between the characters and words lengthened so the average speed is at or just above the level you need to be able to copy. This is often called the Farnsworth method. Most VEs accredited by the ARRL VEC use farnsworth code... the characters for 5 and 13 WPM are sent at 18 WPM with long spaces and 20WPM is just sent 20WPM. If your VE team uses a tape or program that sends your code exam by this format, you need to practice copying it the way you will hear it.

A big selling point for Farnsworth style code practice is that traditionally, there is a "hump" at around 10 WPM, where counting dots and dashes no longer works because the mind can't easily process the information fast enough. The

hump is usually conquered slowly and painfully as the upgrader learns to recognize the sound of the characters without thinking dits and dahs. This is difficult to do as slow as 10 WPM, and so the hump. Farnsworth timing has you doing it "right" right from the start.

Good luck, Tim, and don't look at this as a chore... look at it as an opportunity.

will have access to that radio that you want to modify.

Why not just quit with the RADIO COP lecture and tell the guy how to modify his radio to do what he wants it to do? If he wants to freeband, he will freeband...one way or another. Would you rather he do it on a quality piece of equipment like a TS830 or via a "hack job" on a Golden Screwdriver CB that will then splatter and cause harmonics all across the spectrum?

>scum, yep.

I don't know if it would get rid of "scum", but annual retesting would go far to ensure that amateurs really remain competent in the areas which are considered essential for holding an amateur license. That is the stated government purpose of amateur exams after all.

If a large number of amateurs are unable to pass a retest, that tells us that either we have a lot of incompetent amateurs, and retests are rightfullly getting them off the air, or that the tests are irrelevant to good amateur operation and need to be changed to reflect what is really necessary to be a good operator. Either way, retesting would serve to maintain the relevance of the testing system to amateur licensing.

I'm comfortable with the idea of retesting. If what's on the exams is really necessary knowledge, then we certainly have an interest in assuring that amateurs maintain that knowledge for their entire amateur career.

Whoa nellie! Go back to modulation 101. A OOK Morse signal certainly
does have sidebands. It is a form of DSB AM modulation. Now a *CW*
signal, IE a continous unmodulated carrier, theoretically would have
no sidebands, but in practice even that will have phase noise sidebands.
So operation exactly on the band edge is illegal even if you don't modulate
the carrier at all.

Not quite right. When IBM came to Microsoft, and asked Gates to provide an OS for their upcoming PC, Gates went to Seattle Computer, and bought right to their "QDOS" product, (Quick-and-DirtyOS), which eventually became MS-DOS.

A lot of people don't remember that MS-DOS was just one of several OS's that were sold with the PC in the early years. The first IBM-PC that I used came with CPM/86, for example. Then there was the ill-fated UCSD system...

Here is a summary of news items covered on edition #250 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 16-Jan:
-
1. Gate 4 Day One Vanity Call Signs Gush Forth (I Got Mine!)
2. Some Things to Remember to Change -- Tips to Help Cope
3. Dick Rutan, KB6LQS, Survives "Global Hilton" Balloon Failure
4. Sputnik 40/PS2/RS-17 Officially Declared Dead
5. FCC Reallocates Upper UHF TV Channels to Public Safety
6. Special Event Station Calendar
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. Mir to Remain in Use Until 1999, New All-ham Crew Due Soon
10. "The RAIN Dial-up" from Chicago
11. US Robotics Offers Service to Test Modems and Phone Lines
12. AO-16 "S" Band Turned Off After Test, Pulls Voltage Too Low
13. Photos and Commentary from KE6JAB Up on UO-22 and Web Site
14. "Tower Climbing Safety" with Greg Stoddard, KF9MP
15. IBM Achieves New Hard Drive Storage Record in San Jose Tests
16. Intel to Offer Car Computers, Services in 2000 Model Year
17. Company to Unveil I-Phone Service Rivaling Landline Quality
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, W0ZOK, of
Horace, North Dakota, where "This Week in Amateur Radio" is heard
via satellite Saturdays at 8:00 PM along the Red River Valley on
the W0ZOK repeater on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up in frequency
to 12.031 GHz. Program audio is on the 6.2 MHz analog
subcarrier. A fee has been paid to W0KIE for access to the
```

satellite uplink.
-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA, and at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518.283.3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email kxkvi@delphi.com) or Stephan Anderman, K2SMA, at 518.664.6809 (packet @ N2TY.FN32DW.NY.USA.NA or email sanderman@delphi.com).

But receiving DSS under good conditions is hardly the same for the millions of people who live in rural areas a long way from the transmitter. Are they going to get any usable signal at all? If they cannot, they won't buy! That is quite simple. Would you pay a lot more money for a really sharp picture? That is where most of the cost lies.

Some years ago I was in charge of a design group that was designing Ku band satellite receivers. At that time the only satellite that you could receive here was a Japanese satellite. The Japanese were using a digital audio system. Since the company had the authority to sell receivers locally, I put one engineer to work on a receiver that would decode the digital audio and thus be saleable here. When he got done, it was really amazing. It sounded like the cute lady news reader was whispering the news right into your ear. It was hard to believe TV sound that sounded so good. Much the same effect as the visual aspects of HDTV. However, would I pay a premium for the same old news? Not much.

By the way, how does your DSS system work during a heavy rain storm? Unless you have a very strong signal, the path attenuation really goes up during a thunderstorm. We had to shut down final inspection because we couldn't receive the satellite. The present system required some minor retooling in the late 1940's because things turned up that had not been seen even though there had been broadcasting from about 1936 to the end of 1941. Everyone remembers the RCA 630TS as the prototype of commercial receivers for decades. The set had no AGC. The contrast

control was an RF gain control because common knowledge at the time said that VHF signals were not subject to signal fluctations. Improving AGC systems to minimize airplane flutter was still a problem in the 1960's.

Best regards,

Art Borg

>

Meaning no offense, but you guys have got to be crazy. We have too few amateurs now. Retesting can only decrease the number, as some people will be too busy to retest, or will view it as a hassle that they will not put up with over and over again. For that matter, what is wrong with the hams we have now? Why do we need to mess with them by imposing the burden of retesting? What a pointless hassle that would be!

For example, many, perhaps most hams are disinterested in CW. They bone up, pass the test once, and promptly forget CW. What is wrong with that? Who cares? Most hams retain the knowledge that they need, and do a data dump on the rest. So what?

The hams we have now are just fine. We just need more of them.

GSM isn't used just in Portugal, bot all over Europe, as well as in
small parts of North America (Washington D.C. has a GSM cellular phone
network for instance), and several countries on the Far East.

GSM is a digital cellular phone system which in addition encrypts the
voice data to ensure privacy. Sure, you could receive those signals
on any receiver operating at the proper frequency (around 900 MHz --
soon a new GSM band around 1800 MHz will be used too), but it would
sound mostly like noise, and you would be unable to make anything
out of it.

Cellular phone systems which can be tapped by radio receivers are
older systems, which uses e.g. normal FM for voice transmission.
In Scandinavia, for instance, the older NMT cellular phone system
can easily be tapped, and so can various kinds of DECT (= "wireless
phones") phone equipment - all that's needed is a radio capable of
receiving the right frequency bands.

I have heard a few guys using these on the air on 7290, 3880 and 3885
kHz at night. They do sound loud, BUT you get that narrow "military
audio" unless you modify the MOD section for more lows and highs.

Take a listen to the AM frequencies, you will eventually hear one I am
sure!

For more details about military radios being used on the ham bands,

There is a pretty complete list of hamfests (including a few WINTRER
Ones!) at the ARRL web site.

I have added several more to that list and posted all of them at:

http://www.mnsinc.com/bry/hamlynx/hamfests.htm

I hope that helps!

I guess you asked everyone you saw carrying a handie-talkie the class
of his license and whether or not he knows or supports Morse code. Of
course, you assumed that everyone with a 2 meter handietalkie is a
no-coder. What a dolt!

Gosh, Cutie Pie, can't you figure anything out?

1. Have her remain on a single channel

2. Delete that repeater from your scanner

3. Be happy there *is* a workable solution that is so easy.
If you talk nice you may get to select which repeater you want
to delete.

Hi

I wanted to read at least one, other, return message before I offered my advice.

As you are aware of, there are many new services, coming to the radio specturm, which are of such low power that they can run unlicenced. Cb walkie-talkies below 100 mw are one of them, cordless phones are another.

To some extend even though the problem is generated by the cordless phone, I am assuming you are using well designed equipment, the solution is altimately in your court.

If you want ot approach your neighbour, he/she probably won't understand what your are taliking about. To them their cordless phone is simply a phone without the cord. Most of the cordless phone users don't understand rf interference.

If you should decide to visit them, might I suggest you simply look at the phone to see if they have done anything out of the usual to it. Most cordless phone users have not attached amplifiers so you can, in all likelyhood, illiminate that thought.

You could consider putting in some kind of bandpass filter on your radio.

If the problem is bothersome enough, for you, consider the following as a possibility. Find a cordless phone which does not interfere with your radios. Then before you buy it investigate your problem with the neighbour. Then ask if they would be willing to swap another one with their's. You then buy the other one and take the interfering one and keep it for your own use.

The problem here is 'is the problem worth the possibility of creating a neighbour feud'. I honestly don't it is worth it.' I would rather buy my neighbour a cordless phone that doesn't cause interference, with me, that the alternative.

p.s. consider buying her one of the 900 mhz units.

Absolutely! I'd march my right over there and demand she stop using her phone immediatly. Tell her you will be forced to call the RCMP's if you hear her voice again interrupting your most important scanning activities. Let her know your a radio amateur and that your just too stupid to figure out a solution to the problem so she'll have to stop using the phone. After her boyfriend knocks your stupid ass through the wall, you can crawl back to your room and call for help using your HT. OK?

Incentive licensing was amateur radio's holocaust? How do you explain the
fact that back in the 60's there were <100K amateurs and today there are almost
700K? Yeah, I can see how we've lost THOUSANDS of amateurs.

>And yet... if I was told I would have to re-test
>to keep my ham license, I would let it lapse because I am personally
>tired of being dictated to by those with-in the ranks of Amateur Radio
>who have the attitude they know what is best for me.

Rules change over 10 years. Why is it "dictating" to you when you
need to take an exam to ensure that you are up-to-date technically
and regulation-wise? Your attitude reaks of the same elitism you
claim pro-coders have.

>My commercial Radiotelephone License which was originally issued in
>1958 as a First Class License and now Grandfathered to a General
>Radiotelephone License is good for the rest of my life... no
>re-training or re-certification needed... and this is for a COMMERCIAL

Bad idea. GROLs *should* be good for 5-10 years, like GMDSS licenses
are. Retesting should be mandatory.

Ah, yes I remember it well. And my first receiver, an ARC-5 surplus job heard them all on a single quarter inch of dial. That's where I learned to dig out a single signal from all that QRM and noise and ignore all others and the noise. I wish more people got that type of effective training.

Well thanks for not responding in any way to my questions, since you seem to have avoided everyone of them so I'll assume you couldn't come up with a quick one liner.. I am truly amazed with your "Reality" you seem to feel as though were all fools because we have respect for playing by the rules. You can't seem to understand that there are plenty of us who are content to operate transmitters on HF with real licenses and operate within the law. I guess the thought of this must be a real drag for you. It has nothing to do with a RADIO COP handbook, it's roots are found in respect. Respect for the guy who doesn't have cable TV, respect for those who wish to our ranks, and respect for the CB operator who would can't hear anything because someone is running 100 watts down the street. It's easy for you to make a punch line out of it all, for those of us who consider someone other than ourselves it means much much more.

If I may throw in my two cents worth? Enjoyed both of your posts and would like to comment.

It may be that knowing the code is no longer as important as it once was. It is still a very useful mode and attracts many amateurs, despite the nay sayers. Still, realistically, I agree that knowing 13 words per miute to get HF privelages on all bands is a bit much for some people.

On the other hand, I am afraid that doing away with the code will allow more CB intellects into the bands and decrease the quality of HAM communications. One reason I started in the hobby was the quality of people here. Some of the more vociferous bashers of the code, like "cutie boy" are people we should use the requirement to keep out of the hobby.

The no code tech license was meant to bring more new blood into the hobby and it has. Unfortunately, many of these people are good hams and get turned off by being so constrained to the upper bands.

The ARRL and FCC made it very easy to get a no code license, it does bother me that completely doing away with the code for HF would, again, bring in the rif raff of CB types.

Conclusion, I would support a reduced code requirement that would allow what is now considered a "general license" to those passing CW test of five wpm. Of course, the written exams would still have to be passed.

Sub conclusion, to me, the most rewarding part of this hobby is the knowledge gained in studying for my license. Indeed the spirit of Amateur radio should not be just selling more radios, or for that matter just jaw boning on the air (although I do like that), but the thrust should be to educate the amatuer, especially those without a technical background, to the wonders of electronic communications.

P.S. Maybee I appreciate the hobby because I do not come from a technical backgraound but have gained much knowledge by my participation.

Understoood. But the REALITY of the situation is that the person who asked about the mod has ALREADY made the decision to operate his radio illegally. That's already a done deal. No amount of preaching, rule-quotations, talk about "respect", or whatever is going to change that. He's already made the decision. Period. Now, taking this into consideration, you have to ask yourself "how can he accomplish his goal in a manner that causes the least amount of problems to others?" Remember, he already owns a radio with full transmit capabilities on all amateur HF bands. Tick the guy off instead of being helpful, and you just might find yourself with an irate bootlegger on the ham bands instead of a relatively harmless and happy 27Mhz freebander. Make sense?

There's no reason not to require a renewee to take the same exams as someone newly qualifying for the same license. If the knowledge is relevant for one, it is for the other too. Even timeless things like basic electromagnetic theory can slip away if one makes no effort to retain it. So retesting on *everything* is necessary to make sure the renewee still meets the requirements for holding an amateur radio license.

Since the question pool committee already updates the exams on a regular basis, no additional work is required of them. Since electronic processing is employed by the VECs and FCC, no significant extra workload is imposed on them either, just a few more CPU cycles consumed. VEs will give more exams, but they will be the same exams that they give everyone, the sessions will just be a bit more crowded, and they do charge a fee to cover their costs.

>>The hams we have now are just fine. We just need more of them.
>
>I see a bunch of people who would be better suited in the FRS. I

>don't think we need more of them. We need more dedicated communicators
>and technical innovators. We don't need more mundane "pick up milk on
>the way home, honey".

What we need are amateurs who can prove that they have retained the knowledge and skills the government considers necessary for them to have in order to be radio amateurs. What they do with that knowledge is up to them. If they want to call their wives, they can. If they want to chase Dx, they can. And if they want to fullfill the charter purposes of the amateur service, they can do that too. We can't force them to be technical innovators or hotshot operators. All we can force them to do is to prove that they meet the requirements the government considers necessary in order to hold an amateur radio license.

This seems so obvious and reasonable, I can't see how anyone could oppose it. That is unless they think the exams cover things which are *not* necessary for one to know to competently hold an amateur radio license. In that case, I'd expect an outcry to have the exams revised (for everyone) to cover only what really is necessary knowledge.

Well ok, but of course that would interfear with the current band plan to
have non-voice communications only on those freqs.
I guess I'm still confused, whats wrong with 52.525? Learn it, know it,
operate it! I've worked several states on FM now running 10 watts on 52.525,
leave the rig on all day squelched out, when the band opens I gar on teeee
you'll hear plenty of activity.

Fine. So if we require them to be retested frequently enough, it will be more to their advantage to know the material than to repeatedly memorize question pools with over a thousand questions. Sounds like a great idea to me.

The whole thing. If it is relevant knowledge a new licensee must demonstrate,
it is still relevant knowledge for someone licensed 10, 20, 30, or 40 years earlier.

Im not so sure, it somewhat like joining a country club, if they let anyone come in, then it's not a club anymore is it? I would love to see more advanced tests and perhaps even an all mode VHF or UHF band set aside for just the extra +.
If only 10% would pass re-testing that may be an explanation as to why I hear FM on the satellite passbands, it might explain the QSO's on FM I've been hearing on 144.050. Actually re-testing may be just what we need to rejuvenate the hobby, if you can't cut it then your probably the guy screwing up my SSB QSO on the satellite.

If we require passing of these tests by the newly licensed, what kind of hypocrites are we that we aren't willing to be retested periodically on the same materials? That's the root of this issue. If the newly licensed need to know these things, *so do we*.

I'm not asking that the exams for renewal be *harder* for an experienced and long time licensed amateur than for someone fresh off the street. Though one should expect that the long time licensee would know more. All I'm asking is that they show that they retain the *same* knowledge that they require the person fresh off the street to demonstrate. That's as fair and logical as can be. If you're against this, then you must also be against testing the newcomer off the street. Because if you don't have to know it, then why should he? Any other position makes you a hypocrite.

If you are a competent practitioner in the field, you'd better know the
materials which qualified you to be a practitioner. Otherwise, your
license *should* be revoked for incompetence.

Oh, you say some of the things on which you were tested aren't
relevent to your competence as a practitioner? Sounds like the
curriculum needs revision.

> "I wanna hear him TALK TOUGH!!"

The answer was stated very eloquently by someone before, so with credit given, I'll repeat it. The reason 146.52 doesn't work well for highway travel is that unless the guy is traveling in the same direction as you your QSO time is limited. Think about two cars at 60 mph in opposite directions at the point they pass, they will be 10 miles apart in 5 minutes, probably into the noise if both are running simple antennas. Even worse in the mountains. Tune in 146.52 when you hit heavy traffic, you'll find alot of activity then.

6m is quite a bit better, as far as distance, but most contacts I have made have been with base stations who are monitoring 52.525 it's a great band.

>modulation isn't an AM signal, just a carrier right?

Right. But the moment you start modulating it with OOK Morse, it is no
longer just a carrier. OOK is just a very aggressive form of AM modulation
where the carrier is driven all the way to cutoff on negative modulation peaks.

The modulating envelope is the *keying waveform*. That will have sidebands
either side of the carrier, just like any other AM modulated transmission. For
speeds below 60 WPM, the dominant sideband will be the rise/fall shaping of the
keying waveform. If you follow CCIR shaping recomendations, that'll be 66.66 Hz.
For higher speeds, the dot frequency becomes the dominant sideband. There are
also sideband components at the dash frequency and at the intracharcter space
frequency and the intercharacter space frequency and the interword space
frequency, but they are all less than (or equal to) the dot frequency so we can
ignore them for the purpose of determining occupied bandwidth.

According to the ARRL Lab's tests in the Navy EMP simulator,
that's not true. The only radio to take damage was an older
tube type HF rig. Its first RF stage input transformer winding
was burnt out by the EMP. The low impedance of solid state
equipment's input circuits was able to shunt the pulse safely
to circuit common.

No I'm sorry, it doesn't make any sense to me at all. I'm not going to be intimidated worring about 'tick'ing him off.
Let's put a slight twist on your above comments.
Now keep in mind Rambo, he's already decided to hold up the liquor store, he HAS the equipment to clean the place out if he opens fire, all the preaching in the world will not stop him from holding up this liquor store because he's already made that decision. Period.

So if I follow your logic with respect to our potential bootlegger. I know how to cheat this brand of alarm system, so I should tell this robber that all he has to do is punch in the code "123abc" into the alarm system after 2:00 Am. and he can get in without any trouble. I mean sure the crime has been committed but I was able to assist him and caused the least amount of problems to others haven't I? This notion of "better help em or they might cause you problems" makes me want to throw up. How spineless someone must be to concede to those sort of veiled threats.

Since REALITY seems to be important in your argument, lets talk about the REALITY of this poor bastards dilemma. He has an expensive piece of HF gear and can get NO ONE TO HELP HIM CONVERT IT. That so far IS THE REALITY. Whether he has ALREADY DECIDED OR NOT he's still sitting there looking at his radio wondering what to do. How's that for a REALITY check?

This is precisely what is wrong with amateur radio in general, and the Morse requirement in particular: it IS operated much like a "country club" with Morse code being the equivalent of the "secret handshake" or other initiation ritual.

There is no legal right for these sorts of things to exist where publicly-owned radio frequencies are involved and a license issued by the government is required in order to participate.

Mr. Hynde makes a good point and you still only have to remember 2 numbers...52.Dial up 52. 52 5(2). Close enough for most TV sets!

that decision. Period.

That's a pretty far stretch...equating operating a radio beyond it's assigned
band limits with armed robbery. Come on, Tim. Let's be real here.

>So if I follow your logic with respect

How's that for a REALITY
>check?

How's this? As you mentioned "he has an expensive piece of HF gear and can get no one to help him convert it. That so far is the reality." So, if this remains the case, what do you suppose he will do with the radio?

a) put it in the corner and let it collect dust or

b) use the radio as-is, bootlegging on the amateur frequencies which his radio CAN operate on perfectly well

I'd put my money on "Option B"

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

> calling frequency for 6-meters. Lets pick one, okay? :-)
>
> Dwight Stewart (KF4URZ)

Dwight, there is not a single 'calling frequency' since each mode has it's own band plan. If you called on 50.125 with FM your chances of a response are slim to none since everyone is listening SSB. Same for calling on 52.525 with SSB.

52.525 Primary FM simplex
52.4 Secondary FM simplex
50.125 SSB calling frequency

Local AM groups may have their own simplex or calling frequencies but the ones listed above come from the ARRL band plan.
I'm monitoring 52.525 all the time, if the band opens up gimme a call!

> be retested!

MOST amateurs, who are active, tend to follow along as time and
money permits, with trends in technology. Not ALL amateurs can do so,
because that may not be possible or due to the fact, that certain facets
just don't interest them.

Amateur exams, do NOT come with a Psychological exam. Therefore, just
because someone reads the questions on the exam about spurious emissions,
doesn't mean they will try to keep that from happening. Or to NOT transmit
profanity, etc. WE ALL need to clean up our act. Hams and CBers alike. Or
someone will do it for us. As we are starting to see.

As for retesting. I have seen as a VE TEAM leader, hundreds of people,
take exams and a lot struggled, but they did pass. And, they were/are good
hams. A few were/are not. Those that I feel were not, even tested with an
attitude. I've been a ham since the late 70s and I too am appalled at how
our hobby has declined. But, one or two people, WILL NOT clean it up.
Code or the lack of it, will not do it either.

If we start retesting EVERYBBODY because we don't like how things are
going, then let's also include Lawyers, Doctors, Teachers, Engineers, etc.
I bet that won't go over too well. Why single out those in just the
AMATEUR society???? Why I'd be willing to bet, that some of those Amateurs
to be retested as has been suggested, are also included in the above
list of occupations.

Yes, I knew my necessary topics when I tested and yes, I passed. However,
some of it, as another poster had said, I DO NOT USE or participate in.
RTTY being one of them. So, my need to memorize the necessary o-scope

pattern or bandwidths AFTER the exam except now for VE testing, have gone by the way side. I don't commit it to memory. But, should I ever choose to participate at some point in time, I will take the time to reaquaint myself with it more thoroughly. As for now, I have more important things to do than to MEMORIZE that which I have no use for.

MAYBE, if we went back to the old way of testing, we wouldn't have the problem. I'm not saying it is the cure, but just a thought. When I first tested, the FCC issued a Study Guide with only topics listed. No questions or answers - just topics. If you didn't have an inkling of what was what, lets face it, you failed and wasted a trip. But now, anyone with half a brain can memorize answers enough to get by. THIS may be our biggest downfall. Memorizing a few answers doen't teach the basics of what goes in to electronics. But even this, isn't the total answer. NO HAM TEST can tell who will be a GOOD ham, and who will be a "bad" one. You can ace a test and be the worse person when it comes to dealing with people.
The result, disrespect for others and carrying on, disrupting the airways. Synonimous with a guy who aces the tests to become a lawyer, and passes out poor advice. Or a doctor, who goes against medical principles. If they have it within them, they'll do anything to get their ends met, whether anyone else suffers at their hands or not.

This country has become a spawning ground for disrespect for the law and each other. No one respects the Federal Governments rules or regulations, or local or state laws. It's not just hams, or any one area, it's everyone and everywhere. It'll only get WORSE if we ALL don't start doing something to correct it. It starts in each of us.

Just my 2 cents.

Actually, outside of the amateur clique, this is quite true.

When people find out how boring amateurs are, it's no wonder they don't
care.

Find someone who is totally unfamiliar with amateur radio, and take them
to a club meeting. They'll be ready to leave in 10 minutes if they don't
fall asleep first.

Jim, I wouldn't use "strong" to describe what CW will be doing in 25 years. One glance at the acturarial tables, and yours is but a pipe dream. Only if medical science can continue to prolong the lives of the current pro-coders will there be any beeping on the bands. Also, have you noticed that hospitals have restricted handheld and cellular phone use in the wards? It seems they interfere with the life support systems that these pro-coders will be on. After they are gone, well may I suggest that you visit a museum.

Do you think any of what you state above is "new news"?

Most emergency situations are local in nature. Therefore, the bulk of
emergency traffic tends to be handled on VHF frequencies, specifically,
the 2 meter band, being the most widely used VHF band. Since FM
is the predominent mode on VHF 2 meters, its only natural that there
would be all FM and no CW traffic, since almost nobody does CW on 2 meters.

This not a local emergency. There has been severe damage from
Kingston and Ottawa all the way to New Brunswick. I can see
applications of HF and satellite communications to get stuff
out of the very large affected area.

Yes it is, but I know your smart enough to make the connection. My point is simple, you think freebanding is O.K. Thats fine do it if you must, just don't crusify the rest of us who want to play by the rules.

Well were right back to the old argument "ya better help him do it illegally or pay the consequences" With statements like "use the radio as-is, bootlegging on the amateur frequencies" you imply that I'm only concerned about myself, my amature bands, Im not. I'm taking into consideration much more and this is the point you just dont get, or you simply dont care about. I'm not going to help someone cause unnessesary TVI, Im not going to help him tear up the CB bands and make the frequencys unusable for others who want to use it properly. If he chooses to bootleg on the amateur bands thats fine, at least the output circuitry will keep his harmonics in order. If he does choose to fire up on 20m though, I wonder who he'll talk to? How much fun will it be to have to 'fake' a call or finally meet a group of guys he has somthing in common with but has to lie like a spineless freebander because he cant tell anyone his real QTH or name. Yep sounds like loads of fun to me...I wish him well.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WA4FFW, KP3L, K4VUD, N6RT, KI6WF, KN6DV, K7WX, W8AV, W8CNL, KG9N, HB9LEY, OH2BVE, PB0ALB and PA3AWW for the following DX information.

8Q7AA, MALDIVES (Update). From an updated press release provided by Warren Hill, K7WX: The upcoming 8Q7AA DXpedition to the Republic of the Maldives by members of the Central Arizona DX Association (8Q7, Zone 22) remains on course. The team leaves from Los Angeles on January 15th, and will be active from the Indian Ocean beginning January 18th or 19th, with 24 hour operating on most bands through January 28th. They will be located on Alimatha Island in the Felidu Atoll, latitude: 03 degrees 35' N and longitude: 73 degrees 30' E. This location is also designated as IOTA AS-013. Members of the 8Q7AA DXpedition team will be as follows:
CW Team - Bruce/N6NT, Darryl/AF7O, Warren/K7WX and Steve/N7TX
SSB Team - Oscar/KP4RF, Sally/KM5EP, Rich/K7ZV, Victoria/KC7TIW, Dan/NA7DB and Paul/W8AEF
Bruce Sawyer, N6NT, will also run HF RTTY as operating time permits. Ibrahim Ahmed, 8Q7QC, will help with HF SSB and provide local assistance. There will be four stations running Yaesu FT-1000MP transceivers and Alpha amplifiers on 160 through 10-meters, including all WARC bands. Many of this team were also members of the 1996 XZ1N Myanmar operation. A concentrated effort will be made on the low bands with adequate power and antennas. Several in the group will focus on 40, 80 and 160-meters, with special attention being given to Kboth sunrise and sunset terminator openings at North America. It is understood that 8Q7 is not all that rare for European stations, but for North America, and especially on the low bands, this is a very difficult path. For this reason, many of their efforts will be directed towards working into zones 3, 4 and 5, where the need for zone 22 is still quite strong. QSLs requests for confirmation of contacts with 8Q7AA can be made by either direct, QSL bureau or E-mail routes. Cards should begin to go out within two to four weeks of their return. Direct QSLs go to: Steve Thompson, N7TX, 119 E. Jasmine St.,

Mesa, AZ 85201-1811 USA (Please enclose an SASE with adequate postage). Bureau QSLs cards should be clearly marked: 8Q7AA via N7TX. Internet Bureau QSLs can be requested by sending e-mail to: 8q7aa@cadxa.org (The SUBJECT line should read "8Q7AA QSL REQUEST", followed by the appropriate information in the body of the message.) More complete details are available at their WWW home page: http://www.cadxa.org/8q7aa
ADDED NOTE: OPDX InterNet Subscribers will receive the complete (long) press release by Warren, K7WX, as an additional bulletin.

9G, GHANA. Three Dutch opertors (PA3AWW, PA3DEW and PA3FQX) will once again activate 9G1AA, February 4-25th. Operations will be from Dormaa Hospital in Ghana. Operations will be on CW and Phone, with activity on all HF-bands, including 50 MHz. They will have a 6 meters beacon on the frequency 50.123 MHz. They will also train some local amateurs in using the Yaesu FT 920, donated by the STARS-organization, IARU region 1. The QSL Manager will be PA2FAS.

9K, KUWAIT. Bob, 9K2ZZ, is once again active from Kuwait. His stay this time will be about 1 year. It is reported that, at the moment, Bob has only a 40 meter dipole, but it is very high atop an apartment building. He will be installing a TH6DXX soon. Currently he is running a TS-930 with an AL-800H amp. His QSL Manager is trying to work out a "Battle Creek Special" on loan for 160 meters. Bob will work the WARC bands in the future and is active on CW and SSB and maybe RTTY later in year. He can be found on 40 meters CW most days between 1900 and 0200z between 7003 and 7005 kHz. Per his QSL Manager Ray, W8CNL, "At his (Bob) instructions, no bureau cards will be accepted or answered. Only S.A.S.E. or S.A.E. and postage to me direct."

9N, NEPAL. Charles, K4VUD, will be traveling here February 19th, and states he will be active as 9N1UD. He will return to the USA on March 8th. He plans to be active in two contests during the two weekends after the 19th (ed. probably the ARRL International CW DX Contest and CQ 160 Meters Phone Contest). Also, he is looking for any donations (prior to February 15th) of equipment/gear for 9N1AA. Charles's E-mail address is "harpole@pegasus.cc.ucf.edu", and his snail mail is: Charles Harpole, 3100 N. Hwy. 426, Geneva, FL 32732-9761. ADDED NOTE: While Charles is in Nepal, he will make a side trip (with NO radios) to Bhutan (A5) between the above dates.

HB0, LICHTENSTEIN. Joe, HB9LEY, will be active from here as HB0/HB9LEY next weekend. He states that he will look for North America stations between 0430 and 0630Z, and for JA and Pacific stations between 2030 and 2230Z (January 17th and 18th) on 1830 khz. QSL to JH1BSE, Masa Yamamura 2-10-6 Arai, Nakanoku Tokyo 165 Japan.

NEW OFFICIALS. The SCDXC (Southern California DX Club) has announced their newly elected board: President - Will Angenent, KN6DV; Vice President - Harvey Laidman, W8DX; Secretary - Jim Zimmerman, N6KZ; Treasurer - Charlotte Iseda, KB6FXS; Membership - Harvey Shore, K6EXO; Board members - Neil Kaltman, K6SMF; Cathy Gardenias, KF6LFB; and Larry Shapiro, K6RO.

OOOPPPSSS! There was a mistake in last week's bulletin (OPDX.338). The operator and QSL Manager mentioned under 9M8 (East Malaysia) was incorrect. Operator/QSL Manager should have been Peter, PB0ALB, and not PA0ALB. Please make the necessary changes.

QSL INFO AND NEWS....
Chuck, KG9N, operated the special event station N9N in Woodford County, Illinois, from December 28th to January 4th. He states that he made about 1800 QSOs, mainly with Europe. QSL via KG9N.

Doug, N6RT, reports he finally received the following QSL cards from the printer: FO8DX/FO5VO/FO0BRD/FO0KEO/FO0MIT/FO0PLA/FO0SPE. Doug states these cards are for their October, 1997, operation from Bora Bora. Doug has indicated that he has already started sending out his FO0BRD cards, and will be giving the other operators their cards within the next couple of days. So, their FO QSLs should start appearing shortly. Also, he states, "Thanks for your patience!"
QSL cards for FO contacts go to:
FO8DX via KG6AR (1997 CQWW SSB ONLY) FO5VO via N6VO
FO0BRD via N6RT FO0KEO via N7CQQ
FO0MIT via W6RW FO0PLA via W8AEF
FO0SPE via KG6AR

ROUTE CHANGE. The KP3Z QSL route has been changed, and it will no longer be via WC4E but via NP3HM. Please QSL KP3Z via NP3HM direct. Also, WC4E will only handle QSLs for NP4Z.

Steve Salmon, AA6LF, has a new QSL manager. Gerry Branson, AA6BB, was Steve's QSL manager until he became a Silent Key (SK). Steve's new QSL manager is: Ron Lago - AC7DX, P.O. Box 25426, Eugene, OR 97402 U.S.A. Ron has all of the logs and cards for the following operations by Steve: AA6LF, FO0SST, ZK1XP, AA6LF/KH5 Palmyra, XE2/AA6LF/XF1 Isla Marieta, ZK1ALF, FW/AA6LF, A35SS Minerva Reef, 3D2LF, VK4ALF Great Barrier Reef, VK4ALF/VK9M Mellish Reef and VK4ALF/VK9 Ashmore Reef.

Mac, WA4FFW, reports that ALL cards received for the N4BQW/KH5 Palmyra operation have been mailed. Notice "ALL", this includes all cards received to date via any means. They were placed in the mail January 10th. This also included ALL QSLs for Chuck's other operations: N4BQW/KH6 Tern Island, N4BQW/KH7K Kure Island, N4BQW/KH4 Midway and N4BQW/KH5. Mac states, "Thanks to another Herculean effort by WJ4T, who did most of the work, and made this quick turn around possible."

TG0, GUATEMALA (Update). Jari, OH2BVE, provided OPDX with the following update to the Finnish operation to TG-land which will take place January 18th to February 5th. The Finnish team is hoping to used the callsign TG0OH, but this has yet to be comfirmed. Operators will be Toni/OH1TD, Heikki/OH3JF, Hessu/OH6XY and Raija/OH7LIX. Jari states, "Contrary to some bulletins indicating OH2NSM will be in the group, this is not true. Oliver, OH2NSM is busy building up new house/QTH for himself and his family. Therefore he cannot attend this expedition." QSL via the bureau or direct, but Jari indicates that the following addresses should be

used to QSL. For RTTY QSOs, QSL via OH6XY, Carl-Heinz Ikaheimo, Meijeritie 2 AS 28, FIN-21530 Paimio, Finland (NOTE: The address in Callbook for OH6XY is old and should not be used!) For CW/SSB QSOs, QSL via OH3JF, Heikki Tamminen, Eprantie 4, FIN-11710 Riihimaki, Finland.

VP5, TURKS AND CAICOS ISLANDS (A special callsign to be used). Look for the Caribbean Contesting Consortium (CCC) to activate the Turks and Caicos Islands from Jody Millspaugh's site (VP5JM) February 14-28th. The group plans to be a major multi-transmitter unlimited entry in the 1998 ARRL DX CW Contest. Operators will be Doug/K4LT, Dan/K8RF, Jeff/KU8E, Goose/W8AV, Tom/W8TK, Noel/W9EFL, Ken/WA9S and Geoff/W0CG. The operation will also include a support crew consisting of Lora/K8LJK, Anita/KC8BBE, Steve/N8LGP and several of the non-ham XYLs. A special callsign of VP5FXB will be used during the contest in memory of longtime FOC member and avid contester Al Slater, G3FXB (SK).("No finer gentleman ever graced the ham bands!")
Individual operators will sign use VP5/homecall outside the contest.
QSLs for VP5FXB go to W8AV either direct with an SASE containing sufficient return postage, or via the bureau. Direct cards mailed without an SASE will be answered via the bureau. All contacts will be confirmed. QSLs for the individual operators are via their respective homecalls. Look for significant post-contest publicity on the operation, including a presentation in the Contest Forum at the Dayton Hamvention in May.
The team would like to send a special thanks to Ten-Tec Corporation for support of this undertaking. Also, for more details please take a look at their WWW site at: http://asgard.kent.edu/ccc/vp5fxb/vp5fxb.htm
The CCC crew is presently searching for additional operators to participate in the contest. Anyone interested should contact W0CG (ghoward@kent.edu), K4LT (k4lt@fuse.net), or W8AV (w8av@aol.com) or check the WWW site (above) for more info.

Baloney, anyone wanting a license can go to Radio Shack, buy Gordo's book, study it, take a test and use our amateur radio frequencies. No secret handshakes or initiations. And certainly no code.

Now, if you want to join a local club, thats another story, if it's a QRP/Builders Club I don't think it's unresonable for them to ask you to at least have an INTEREST in learning how to build and operate QRP do you? I mean if a guys shows up at this particular club and says "Hey I'm an appliance operator and thats all I ever want to be" do you think its wrong that no one has much interest in talking to him?

As far as legal rights, I have have no idea what the hell your talking about. No one is forcing anyone to join amateur radio, learn morse code or otherwise. If I have a ham radio club I can make the rules whatever I want excluding discrimination for sex, age, religious preferences etc. If you don't like the rules, you simply don't join, or even better yet, start your own club!

"The term 'argument' refers to the basic unit of reasoning, and we
define
it as 'a unit of discourse in which beliefs are supported by reasons'."
"Logic, An Introduction" by Lionel Ruby, ï¿½1950, J.B.Lippincott Co.

So you see, Curtis, you guys were arguing whether you realized it or
not.

>(for everyone) to cover only what really is necessary knowledge.

People's opinion on this issue would seem to depend on whether they
feel the ARS licensing tests are gateways to be passed through or
competency standards to be met. If it's only a gateway, then there
is not much reason to retest, but then the content of the tests is
also much more subjective and arbitrary. After all, it it is OK to
forget the material after you've passed the test, then why was it
really necessary to test for A versus B? On the other hand, if they
are competency standards, then it does matter specifically what A
and/or B are and they should be relevant to the stated purpose of
the ARS.

Someone else mentioned college exams and flight tests as examples
of tests they would not want to take over again.

In the case of college exams though, there are really two kinds of
exams. Those in your field of competency and those outside. I was
required to pass both to get a degree, but the purpose of the
non-technical courses was to ensure that I was a well rounded
person versus any specific certification of competency, so I had
relatively wide choice of what courses I could take in this category
and no one has ever asked me or cared which ones I took. On the
other hand the choice of technical courses was more constrained
and a hard core of subject content was required. Even though I
don't have to take re-tests of these technical courses, in actual
practice, I am re-tested just about every day on my knowledge as
employers and clients judge me constantly on my professional
expertise.

In the case of flight tests, it should be pointed out that retesting *is* in place. For all pilots a Bi-annual Flight Review or BFR is required which is about equivalent to the first checkride. In a strict sense it is not a test in that you can't "fail" it and get your license pulled. In a practical sense it is, because your license is no use without a current signoff certifying you for flight which a CFI won't give if you need remedial instruction. Also those with instrument flight privileges must have logged sufficient flight experience every 6 months or else undergo an Instrument Proficiency Check flight test to regain those extra privileges. Airline and commercial pilots are generally given a checkride by company checkpilots every 6 months, regardless of FAA regs, pretty much as standard industry policy.

So I would guess that those that look at their ham activities mostly as recreational are unlikely to think much of retesting; while those who see it as a "spectrum for public service" quid pro quo are more likely to support retesting. In any case, I doubt that a frequency of every year is necessary, every 5-10 years (about what most state DMVs ask for if they have a re-test policy) would be sufficient to ensure that basic competency is met as there are few cases in amateur radio where 2nd or 3rd party life and limb are at risk as with driving or flying.

One last point, it has been stated that many hams couldn't pass a retest. If true, I think this is largely because the system doesn't require a retest and so tolerates a "learn-and-forget" attitude. A system which publicly and loudly reminds licensees that they will be retested would see the same people who passed the first time pass again - after all the capabilities to pass the test (whether it is test-gaming or actual knowledge) were demonstrated before. The only difference is that those who didn't find much use for the license the first time through would be more likely to just let the license expire versus going through the trouble of boning up again. Contrast that to today, where sending in some paperwork and a few bucks is easy enough that many will do it just to have the privileges available even if they haven't been using them much.

hmm... an awfull lot of protesting and generalization here... it is just as bad to chastise an entire group (i.e. old farts"... as it is for one of them to chastize a newbie for asking a "stupid" questions (the only stupid question is the one that doesn't get asked). Perhaps, you should consider treating everyone as an individual... After all, they are individuals. All the message below will do is create animosity, and further the "arrogant young twit" stereotype.

Hey.. lighten up... :)
